

American Racing®
SINCE 1956

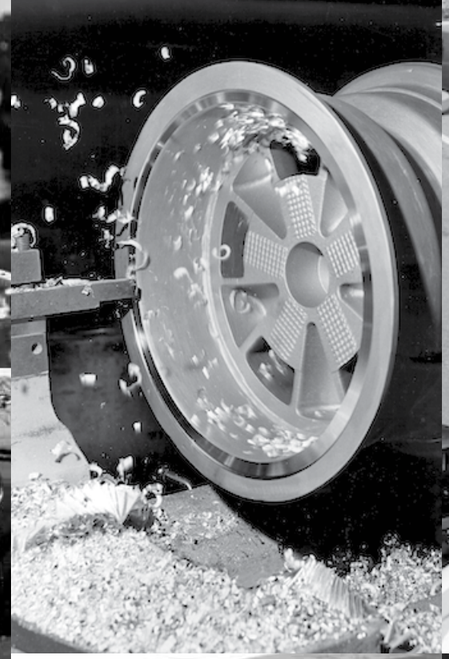
60 YEARS OF REDEFINING AMERICAN MOTORSPORTS

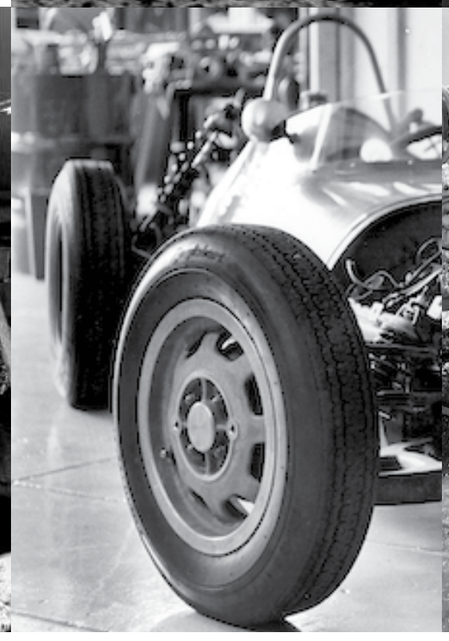
Smoke pours out from under the wheel arches as police lieutenant Frank Bullitt -- played by Steve McQueen and doubled by veteran stunt driver Loren Janes – wheels his Highland Green 1968 Ford Mustang GT 390 fastback through San Francisco. The driver works through the gears as the car blazes along the highway, slides through dirt and dives over hills and intersections in the notoriously hilly city.

There isn't an automotive enthusiast who hasn't seen it: the 10-minute car chase in Bullitt is widely regarded as one of the most iconic in cinema history, and it should come as no surprise that the starring car is fitted with American Racing wheels.

"Americans" have defined performance for decades and the popularity of key designs, including the TORQ THRUST® seen on the Bullitt Mustang, the 200S "Daisy," and the Ansen Sprint slot mag, are so deeply ingrained in hot rod and muscle car culture that it's impossible to imagine vehicles of the '60s and '70s without them. Hot Rod Magazine even named the TORQ THRUST® wheel one of the "10 most significant speed parts of all time."

The company's roots stretch back some 60 years to a San Francisco speed shop when racer Romeo Palamides and shop owner J.O. Ellison teamed up to build a winning fuel dragster. Working from Ellison's small machine shop, they realized their vision with "The Romeo," a 375 horsepower dragster.





American Racing SINCE 1956

TORQ THRUST® WHEELS

Among the secrets to its competition success were its lightweight magnesium custom wheels

Designed for the team by engineering innovator Tom Griffith. It wasn't long after the car landed on the cover of the November 1956 edition Hot Rod magazine that the team began fielding calls about the wheels, and American Racing was born. By 1958 American Racing had launched the four-slot magnesium racing wheel called the Standard. But it was the company's 1962 introduction of the TORQ THRUST® that solidified American Racing's position as an aftermarket icon.

In an era when European racing wheel companies were focused on semi-solid modular styles, the design was revolutionary: five tapered parabolic contour spokes to reduce wheel weight and promote brake cooling. The design became increasingly popular among hot-rodders who had made the strip-to-street conversion as a welcome alternative to factory styles.

As the company grew, the line expanded: in 1968, polished spindle-mount TORQ THRUST® wheels were introduced and became the dominant wheel on Funny Cars of the day. A year later came the 200-S, also known as the Daisy. In 1971 American Racing discontinued the TORQ THRUST® but demand never waned and, a decade later, hot rodders were paying for a clean vintage set. American Racing returned to its roots in 1986 and brought back its first re-engineered TORQ THRUST®, variants of which have remained in production to this day.

Now, the next generation of modern muscle is finding a perfect partner in American Racing with modern hot rods joining the classics – like the iconic Bullitt Mustang – in the history books.

AMERICAN RACING

From performance on the track to bravado on the street, there has been one constant - innovation. It pushes everything we do. With decades of heritage in American motorsports across every discipline, every turn of an American Racing wheel proves one simple thing, we're never idle.
