

Factory Engine Mount vs. Density Line Engine Mount

Thin Low-Durometer Rubber Shell

Factory engine mounts are manufactured using soft 45 durometer rubber with large fluid-filled voids. The factory mounts are designed to be as soft as possible, and sacrifice performance for comfort.

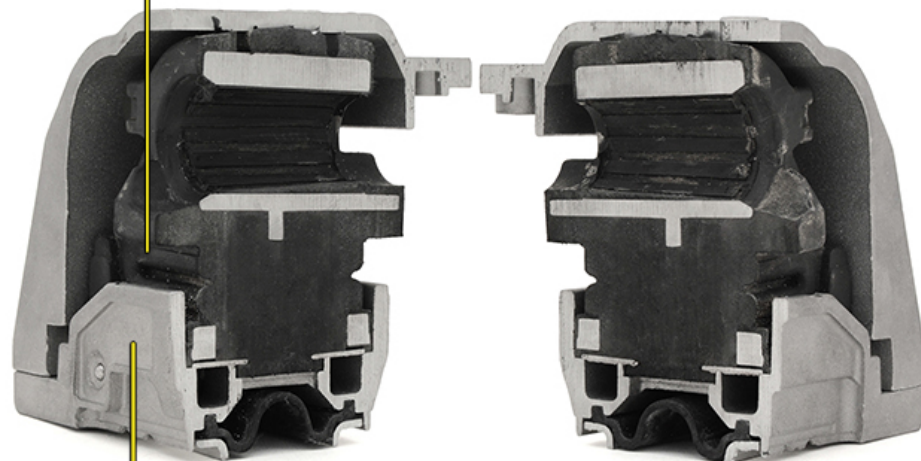

Fluid-Filled and Failure-Prone

Factory engine mounts contain large fluid-filled voids in the rubber damping medium which ultimately leaks and causes the mounts to collapse.

Density Line High-Durometer Rubber

034Motorsport Density Line Mounts feature 65 durometer rubber with void-free and fluid-free construction to decrease unwanted engine movement and improve mount durability.

High Quality Cast Aluminum Mount Body

034Motorsport Density Line Engine Mounts are manufactured in an ISO/TS16949 certified facility using OEM production techniques and stringent material specifications.
