

## THE COMPANY

Call it the power principle: cold air is denser than hot air, and allowing an engine to breathe in cool outside air without restrictions can result in more power and better efficiency. This is the principle behind AIRAID® cold air intake systems. Founded in 1997, AIRAID® is a leading manufacturer of cold air intake systems, premium performance air filters, and PowerAid® throttle body spacers for domestic and import cars, trucks, and SUVs.

Each AIRAID® product line is the result of exhaustive research and development. Our in-house engineering team consists of both mechanical and industrial design engineers using advanced 3-D CAD modeling equipment to produce products that are designed to make more power right out of the box. A portable 3-D scanner and rapid prototyping machine allows AIRAID® to test new product on our in-house Superflow flow bench and verify the high grade fit, finish, and style that AIRAID® customers demand. Our intakes are then tested on our all-wheel-drive Mustang chassis dynamometer to produce real-world performance numbers.

AIRAID® premium filters are produced in-house using high quality materials and highly specialized manufacturing equipment

## *The Performance Intake Company*

to ensure a premium level of quality control. This is just one of many reasons why AIRAID® filters are backed by our "no hassle" lifetime warranty. All of AIRAID®'s product lines are proudly manufactured in the USA.

Each year AIRAID® travels to dozens of shows all over the country, so we're sure to be in your area sometime soon. To keep up on the latest AIRAID® news, products, and events, visit [www.AIRAIID.com](http://www.AIRAIID.com), and check us out on your favorite social media outlet, whether it's Facebook, Instagram, Twitter, or YouTube.

### FOOTNOTES:

Some vehicles have two or more engines that have the same engine size and may not use the same filters. If this is the case, the VIN number is the best way to determine the proper replacement filter for your vehicle. The VIN number should be visible on the dash of your car. Use the following guide to properly identify the VIN number digit for your application (#-represents the code location):

### Other useful abbreviation codes:

2WD	Fits two wheel drive vehicles.
4WD	Fits four-wheel drive vehicles.
All	The part fits all vehicles for the entered year, make, model, and engine size.
Bbl	Denotes the carburetor configuration. Example 2bbl is a two barrel carburetor.
DOHC	Denotes a dual overhead cam engine.
exc.	Except
MAF	Mass Airflow Sensor
MEX	Mexico
OHC	Denotes an overhead cam engine.
SOHC	Denotes a single overhead cam engine.
V	Valve, for example 32v indicates the part is for a 32-valve vehicle.

## COLD AIR DAM

### COLD AIR DAM INTAKE SYSTEMS

It is a proven scientific fact that cold air is denser than hot air, which means that an engine breathing cold air is probably going to make more power than the identical engine breathing hot air. Why? Because the denser air charge provides more oxygen molecules for more complete combustion of the atomized fuel in the cylinders, and more combustion means more power. The quest for cold air is what drives the AIRAID® Cold Air Dam intakes.

The CAD Intakes retain the stock filter location but give the stock intake system a big boost with the addition of a huge air inlet that helps provides a steady, free-flowing supply of cold air. This is done via Cold Air Dam panels, which mount in the factory air box location and utilize any factory cold air inlet ducts that are present, while adding additional cold air passages to the filter. These panels also help keep the filter isolated from the hot engine compartment air by sealing to the underside of the hood via blade-

2009-2013 CHEVROLET SILVERADO 1500  
4.3L, V8 4.8L, V8 5.3L, V8 6.0L, V8 6.2L

style weatherstripping. Each AIRAID® Cold Air Dam intake is designed specifically for each vehicle application and offers a simple, trouble-free installation using common hand tools. Like the rest of the AIRAID® systems, the CAD Intakes include all the necessary installation hardware and easy-to-understand instructions written with the do-it-yourselfer in mind.

## AIRAID MXP SERIES

### GAINS WITH AIRAID® MXP

The AIRAID® MXP series is our premium line of cold air intake systems designed for high performance gas and diesel applications. The MXP intakes start with a new one piece rotomolded air box that addresses the shortcomings of the restrictive factory design. Then AIRAID® adds a new air intake tube constructed of cross-linked, high-density polyethylene that is designed using extensive computer modeling to maintain proper mass air flow readings and calibration. They also frequently have a built-in velocity stack, which further promotes airflow. What this all means is a simple-to-install system that was designed using extremely sophisticated technology to increase airflow while maintaining proper air / fuel ratios, therefore eliminating the need

2005-2009 FORD MUSTANG V8 4.6L

for re-calibration once installation is complete. Just bolt it on and go! Like any other AIRAID® intake system, the MXP includes an AIRAID® premium filter that is sized to improve power and efficiency.

The AIRAID® MXP series combines high-quality components, excellent fit and finish, and aggressive styling. Whether the purpose is to simply eliminate factory restrictions or improve upon other performance modifications, trust the AIRAID® MXP series to get the job done.

### A CLASSIC DESIGN

AIRAID® classic intakes add a new spin to vehicles with limited air flow to the original filter location. Our mandrel-bent, powder-coated inlet tube moves the air inlet to a better location increasing air flow at the drop of the throttle. The exclusive filter adapter sends air directly into the intake system, providing increased horsepower over the stock air box. The 360-degree conical AIRAID® premium filter is washable and reusable; it is less restrictive than traditional paper and assures superior filtration.

For off-road enthusiasts, some kits include a specially designed splash shield. AIRAID® classic intakes are available for a variety of vehicle makes and models, offering a cold, dense air charge for improved horsepower, torque and fuel efficiency.

# FILTRATION TECHNOLOGY

## FLOWING RESULTS

AIRAI<sup>D</sup> revolutionized the automotive aftermarket in 2002 with the introduction of our SynthaFlow<sup>®</sup> composite material. This material, which AIRAI<sup>D</sup> pioneered after exhaustive research and development, remains the standard by which other filters are judged today. AIRAI<sup>D</sup> premium filters are built using a combination of precision equipment and quality materials, along with the attention to detail that only fine hand craftsmanship can provide. We start with multiple layers of cotton gauze and then add our own proprietary blend of synthetic materials, resulting in a superior filtration system that allows plenty of free-flowing air for added performance, but not at the cost of letting contaminants get through. In fact, AIRAI<sup>D</sup> premium filters are proven to trap even microscopic dirt particles that often get past the common cotton-gauze "performance" filters typically found on the market. We are so confident in our filters that we back each and every one of them with a "no hassle" lifetime warranty. If you ever have a problem with an AIRAI<sup>D</sup> filter, we'll take care of it, no questions asked!

### WHICH FILTER IS BEST FOR YOU?

#### Dusty Dry Conditions

- Oiled is recommended

#### Everyday Street Driving

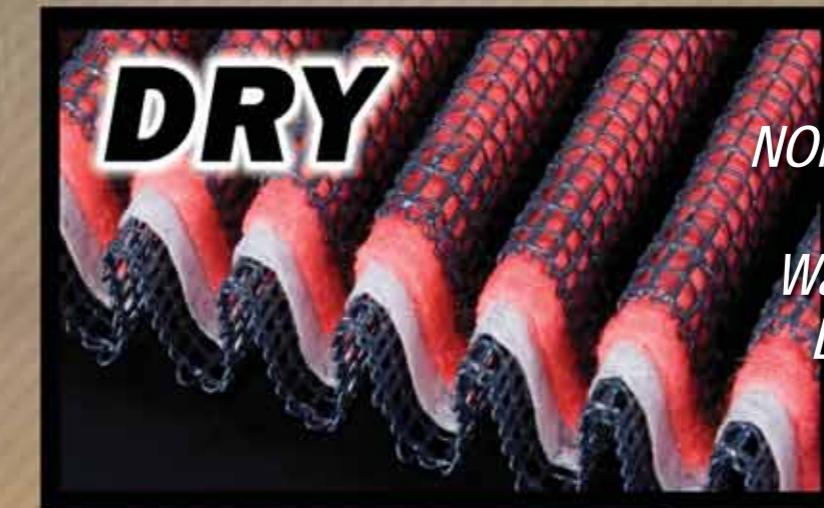

- Non-Oiled is recommended

Oiled or Dry, both types offer free flowing protection and filtration for outstanding performance.

### SYNTHAMAX<sup>®</sup> DRY TECHNOLOGY

In 2009 AIRAI<sup>D</sup> introduced the next generation in filter technology. Our SynthaMax<sup>®</sup> filters feature 100% synthetic filter material, which offers the same superior filtering properties as our pioneering SynthaFlow<sup>®</sup> media, but without the need for periodic oiling. SynthaMax<sup>®</sup> non-oiled filters are both washable and reusable. When it is time to service the air filter, we offer a premium cleaning solution that cleans the filter without damaging the filter media. Best of all, they look great! At first they seem indistinguishable from the iconic red cotton performance filters, but even after many services, colorfast-dyed SynthaMax<sup>®</sup> will maintain its colorful appearance. SynthaMax<sup>®</sup> Dry filters are also available with blue or black filter media.

### DIESEL PERFORMANCE

Diesel engines are THE choice for heavy hauling. Modern diesel engines produce mountains of torque but also need incredible amounts of air to make power. AIRAID® understands the unique needs of diesel trucks and has developed a complete line of cold air intake systems that deliver plenty of clean, cold air to everything from stock to heavily modified diesel engines.

AIRAID® Cold Air Dam (CAD) systems utilize specially formed metal panels that help keep hot engine compartment air away from the filter

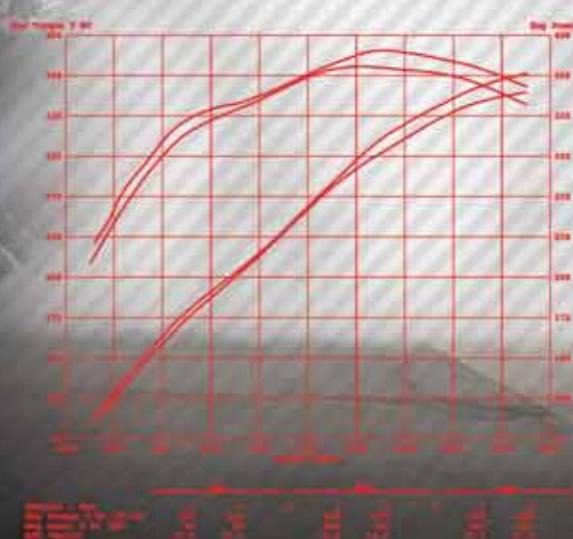

while directing in plenty of cool outside air. AIRAID® MXP systems include a complete replacement roto-molded intake box that utilizes the factory cold air inlet duct while often adding additional cold air inlets. Both types of intakes use massive premium air filters to handle the tremendous airflow requirements of modern turbocharged diesel engines. AIRAID® diesel intakes work with the factory tuning, so no additional modifications are needed. All in all, AIRAID® offers quality performance intake solutions for modern diesel trucks.

# BOLT-ON HORSEPOWER GAS TRUCK

- Bolt-On Horsepower
- High Flow Filters
- No-Hassle Warranty

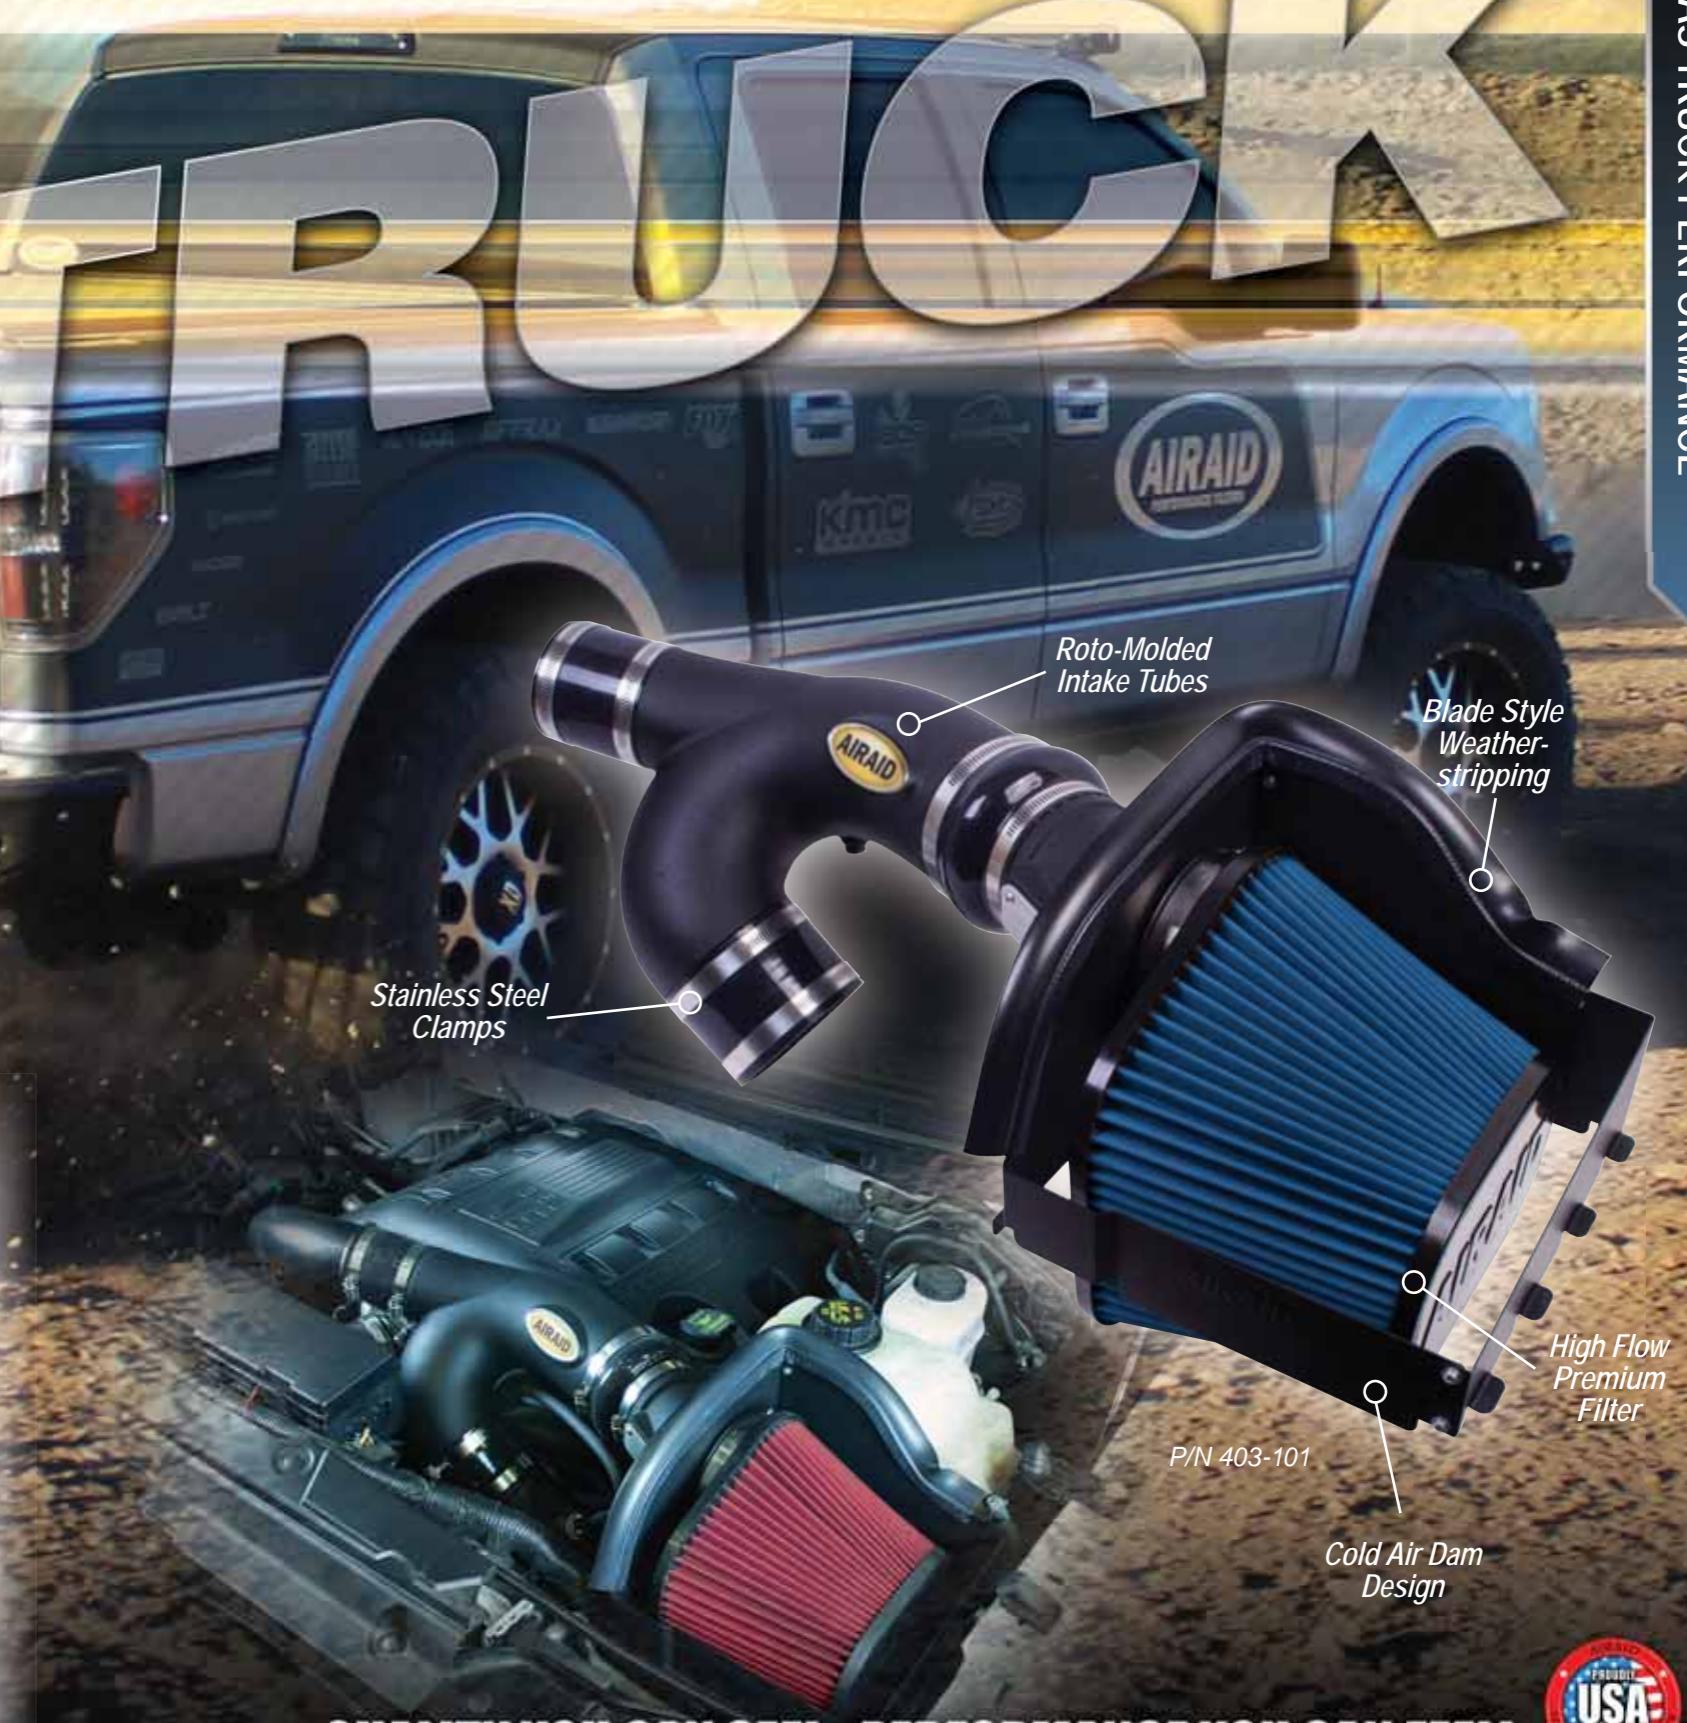

**Four filter choices,  
three color options**

## GAS TRUCK PERFORMANCE PRODUCTS

AIRAID®'s roots are in bolt-on performance for gas-powered trucks. Since the original AIRAID® classic intake for the late '80s TBI Chevy trucks, AIRAID® has specialized in offering bolt-on Cold Air Intake solutions for most popular domestic and import trucks. Today we use cutting edge technology and high-quality materials to build cold air intakes for late-model trucks and SUVs.

Modern truck engines are very efficient but are plagued by restrictive factory intakes that hurt performance. AIRAID's MXP and CAD intakes target the restrictive factory components and replace them with free-flowing intake boxes that pull cool outside air while keeping hot engine compartment air away from the filter. That cold air travels through a premium filter that is designed to improve airflow without sacrificing filtration. A new intake tube further improves airflow to the engine while still allowing the MAF sensor (if applicable) to work within factory calibrations. Allowing the engine to breathe in plenty of cool outside air improves power and throttle response at the same time. Rest assured, whether it's a Toyota Tacoma, an Ecoboost F-150, or any other late-model truck, AIRAID® offers the best truck cold air intakes on the market.

**QUALITY YOU CAN SEE! • PERFORMANCE YOU CAN FEEL!**

# BOLT-ON AMERICAN MUSCLE

## MODERN MUSCLE PRODUCTS

The modern muscle car wars are in full swing and we all get to benefit from some of the most powerful late-model muscle cars to ever roll off of an assembly line. Whether your preference is a Bowtie, a Blue Oval, or a Mopar, AIRAID® has modern muscle covered.

The biggest current news in the muscle car world is the release of the 2015 Mustang, and AIRAID® offers multiple intake options for the 2.3L Ecoboost, the 3.7L V6, and of course the 5.0L GT. Our MXP intake system offers solid bolt-on performance gains, while our cold air dam race intake provides big airflow and supports other performance modifications. These new systems join our extremely popular line of Mustang cold air intakes for multiple generations of this popular pony car.

Chevrolet fans are all about the newest C7 Corvette, and AIRAID® once again delivers the goods with a complete cold air intake system

for the V6 and V8 Camaro offer simple, solid ways to increase performance with no tuning required. We even offer intakes for lower production Chevy performance applications, including the Cadillac CTS-V, the Camaro ZL1 and the Chevy SS.

Mopar muscle fans have more choices than ever before with the late-model Challenger, Charger, and Chrysler 300C, and AIRAID® has all three engine choices covered: the 3.6L Pentastar, the 5.7L Hemi, and even the fire-breathing 6.4L Hemi in the SRT-8s. We offer a traditional cold air dam system for these applications as well as a new MXP series intake featuring a one-piece roto-molded intake box and engine-specific intake tubes. Regardless of your performance

# JEEP

## UNLEASH THE POWER

**AIRAID**

## STREET & TRAIL PERFORMANCE PRODUCTS

### JEEP BOLT-ON POWER

There is no denying that Jeep vehicles are a mainstay of the off-road world. Their compact design, solid axles, and low gearing enable off-road enthusiasts to tackle trails that leave most other makes running back to the pavement. However, with the exception of the Hemi-powered Grand Cherokee, Jeeps have never been known for being powerhouses. Sure, the 4.0L inline six-cylinder is well respected for its low-end torque, but the various four-cylinder engines along with the 3.8L V-6 in the 2007-2011 Wrangler are seriously lacking in the power department. The new 3.6L Pentastar engine in the 2012 Wrangler is a welcome change, but overall, Jeeps need all the help they can get when it comes to making power. Once again, AIRAID® delivers the goods with a complete line of cold air intake systems.

AIRAID® intake systems are available for popular Jeep models, including the Wrangler, Cherokee, Grand Cherokee, Hemi-powered Grand Cherokee, and the fire-breathing SRT8. Each system has been extensively dyno-tested to provide increased airflow and a steady supply of cold air for more horsepower, torque, and fuel economy. AIRAID® intake systems can also help restore the power lost to heavy vehicle accessories, such as oversize tires, steel bumpers, winches, and rollcages. These intakes have the same precision fit and finish as the rest of the AIRAID® product line and are backed by our exclusive "no hassle" lifetime warranty.

**QUALITY YOU CAN SEE! • PERFORMANCE YOU CAN FEEL!**

### JEEP POWERAID® SPACER

PowerAid® throttle body spacers help make the most of the available power and torque in a Jeep. PowerAid® spacers improve part-throttle torque and mid-range power, which is right where Jeep engines need the most help. Our patented helix bore design gives the incoming air a spinning motion as it passes through the spacer, which improves the velocity of the air charge as it enters the combustion chamber. This translates to more complete combustion of the atomized fuel and helps provide more power.

**MODULAR INTAKE TUBES**

Air is lazy and will always follow the path of least resistance. So, why not give it an easier path into your engine with AIRAID® modular intake tubes! Constructed of cross-linked, high-density polyethylene, the AIRAID® MIT provides a smooth path to the throttle body that flows up to an additional 400 cfm over restrictive stock intake tubes.

With the AIRAID® MIT, additional horsepower and torque can be had with just simple tools and a few minutes for installation. All of the required hardware is included along with easy-to-follow instructions.

AIRAID® Modular Intake tubes are built specifically for each make and model, and are compatible with stock intakes as well as all other AIRAID® intake systems.

# PARNELLI JONES

## Signature Series Intake Systems

The muscle car wars are back in full swing, and Ford has thrown down the gauntlet with the Mustang GT and BOSS 302. Now AIRAID® has teamed up with legendary BOSS racing champion Parnelli Jones to release special edition MXP series carbon fiber intake systems for the latest generation Mustangs.

Parnelli Jones raced the original Mustang Boss to a Trans Am Championship in 1970, so he knows a thing or two about Mustangs and how to make power. AIRAID®'s newest MXP series intake systems are a tribute to Parnelli's devotion to power and performance. Like all of AIRAID®'s MXP series intake kits, no special tuning is required and the installation is a simple bolt-on procedure.

The AIRAID® system starts with a REAL carbon fiber 4.25" diameter

intake tube. This is not some cheap imitation piece; it is real hand-laid carbon fiber that adds a show-quality look to the engine compartment. It allows for less restricted airflow and incorporates a special billet plate that accepts the factory MAF sensor. The Intake Tube connects to AIRAID®'s one-piece roto-molded cold air box via a urethane hump hose and stainless steel clamps. The box is designed to keep hot engine compartment air away from the filter while increasing the amount of cold air available and even utilizes the factory cold air scoop.

The special addition Parnelli Jones carbon fiber Mustang systems are available for the 2012-2013 Mustang BOSS 302. 2011-2014 Mustang GT available in carbon fiber only!

### CARBON FIBER INTAKE SYSTEMS

AIRAID® offers a premium line of MXP cold air intake systems that feature a REAL carbon fiber intake tube. Available for select Camaro, Corvette, and Mustang applications, these hand-laid carbon fiber intake tubes optimize airflow and improve power, and they do it with a show-quality, race-inspired look!

All of AIRAID®'s MXP carbon fiber intake systems include a one-piece roto-molded air box that utilizes all of the factory cold air inlets while keeping the filter isolated from hot engine compartment air. A built-in velocity stack further optimizes airflow through large oiled or SynthaMax® dry premium filter. Select kits are even available with a blue SynthaMax® filter. The filter is connected to the engine via a genuine hand-laid carbon fiber intake tube that includes a billet aluminum MAF sensor housing and billet hose attachment ports when necessary. The intake tube is attached via silicone or urethane couplers and stainless steel clamps. The carbon fiber intake tubes are also available separately for those that have already purchased an MXP system but wish to upgrade.

Like the rest of AIRAID®'s product line, each MXP carbon fiber cold air intake system provides an exact fit and installs easily using simple hand tools. With AIRAID® carbon fiber intake systems, customers benefit from improved power and style at the same time!

### CUSTOM CARBON FIBER HATS

Having a supply of clean, cold air is especially important on high-performance engines, which is why AIRAID® now offers unique carbon fiber hats that enable carbureted engines to take advantage of our modular U-Build-It Intake systems. Constructed of REAL carbon fiber, these hats feature standard 5-1/8" base 4" inlet or 7-1/4" base 5" diameter inlet. Shaped to improve airflow, car builders can use our carbon fiber hats along with other UBI components to build their own high-performance cold air intake system!

# U-BUILD-IT

## CUSTOM INTAKE SYSTEMS

### EASY TO BUILD...

#### *...just follow these 4 simple steps*

If you can imagine a custom intake system, now you can build it! The U-Build-It (UBI) kit is a versatile system that can make it easy to fabricate a custom intake system. Our master kits include everything you need to build a complete system, and all components are also available individually for increased adaptability. Whether you are doing an engine swap or have a custom application where space is tight, the AIRAID® UBI intake system can accommodate just about any application. The only limitation is your imagination!

Each UBI master kit and individual intake tubes are available in 3", 3.5", 4", 5", and 6" diameters. The roto-molded intake tubes feature multiple angles and straights that allow you to route the intake to almost any desired location in the engine compartment. The master kits include an intake tube, coupler, hump hose, reducer, brackets, hose clamps, hardware, and a premium AIRAID® filter.

### 1 THROTTLE BODY, TURBO CHARGER & SUPERCHARGER SIZE

Determine the diameter of the throttle body or air cleaner housing flange on the carburetor. AIRAID® offers a variety of universal and application-specific couplers as well as multiple carburetor hats to accommodate most popular engine swap applications. Make note of the coupler or carb hat part numbers needed, as these will need to be ordered separately from UBI master kits.

## 2 INTAKE TUBES & MASTER KITS

Determine the tubing diameter. UBI tubes are available in 3", 3.5", 4", 5", and 6" diameters. Generally speaking, it is best to use a tube diameter that is equal to or greater than the diameter of the throttle body. Take into account the diameter of any mass air sensor housings (if applicable) along with the amount of room available to route the inlet to the desired location.

## 3"- 6" TUBE DIAMETERS AVAILABLE

**UBI**  
intake systems are  
also available as master  
kits which include a filter,  
various couplers and  
hardware!

Plastic Filter Adapter  
P/N 160-641

Various Filter Sizes Available

### 3 CHOOSE WHICH HIGH FLOW PREMIUM FILTER WILL WORK BEST FOR YOUR APPLICATION

Determine the filter size. This is usually dictated by the amount of space available. Larger filters allow more airflow and can go longer between cleanings than smaller filters. For highly modified performance applications, we recommend using the largest filter that space allows. Our master kits include a filter that is appropriately sized for the tubing diameter feeding stock to moderately modified engines.

**Four filter choices,  
three color options**

### 5.5" & 6" FLANGE FILTERS ALSO AVAILABLE SPECIALLY DESIGNED FOR HIGH PERFORMANCE APPLICATIONS

### 4 ADDITIONAL COMPONENTS (HOSE CLAMPS, BRACKETS, ADAPTERS, ETC)

Determine what other accessories are needed. Master kits include one hump hose, one silicone coupler, and one reducer coupler, as well as a variety of intake tube support brackets. If you anticipate needing additional couplers or brackets, they can be ordered individually. Note that hump hoses are best used at joints that will experience high vibration, such as an engine-mounted tube connected to a body-mounted air box or filter. We offer A-body and F-body specific Cold Air Dam panels as well as a universal air box for those that want a more sealed air box design. We also offer an assortment of universal MAF adapters that make it easy to mount a mass-air sensor on your new custom intake system.

#### Hose Clamps

# UNIVERSAL COMPONENTS

## A-BODY / F-BODY / NEW UNIVERSAL BOX

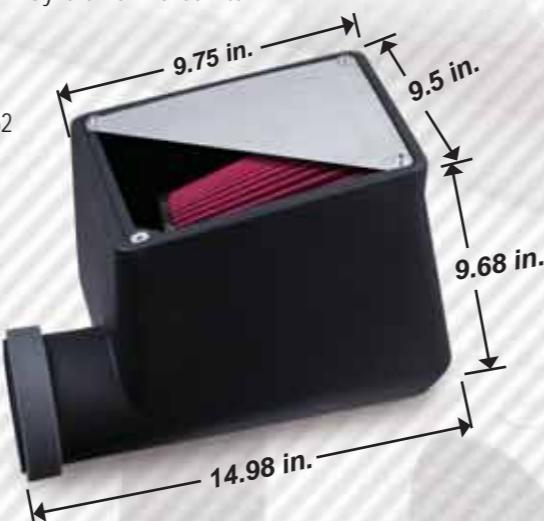

Designed to be used in conjunction with AIRAID®'s other UBI system components, AIRAID®'s A-Body and F-Body specific Cold Air Dam systems allow the air filter to be mounted on either the driver or passenger side of the engine compartment. The metal Cold Air Dam design helps the air filter isolated from hot engine compartment air while allowing the engine to breath in plenty of cold, fresh outside air. The built-in velocity stack further promotes airflow, and different versions of the kit can accommodate 3", 3.5", and 4" intake tubes. The kit also includes an oversized air filter that utilizes AIRAID®'s SynthaFlow® oiled filter media.

The AIRAID® universal air box is the solution for those that want a more sealed air box design. The universal air box helps protect the filter from contaminants such as mud and water in off-road applications, and its large single inlet can be easily adapted to pull air from a fenderwell, core support, or any other location that offers a steady supply of cool outside air. Like the Cold Air Dam panels, the universal air box includes a velocity stack and a premium SynthaFlow® oiled filter.

## SPECIALTY LS FILTERS

Whether it's an LS1 going in a street rod or an LS7 going in a sand buggy, the GM LS engine family is the powerplant swap of choice among many automotive enthusiasts. AIRAID® has released a line of specialty filters that address many of the unique induction needs of an LS swap, making it easier than ever before to make LS engines work in custom applications.

AIRAID's new line of specialty LS filters are designed to clamp right on to the throttle body of the LS engine, which simplifies the induction system and makes for a compact, easy-to-use package. Filters are available with a standard 3.875" flange to match a factory throttle body, or with a 4.25" flange that is compatible with most aftermarket throttle bodies. The filters feature an extra-thick flange to better withstand heavy vibrations and a built-in velocity stack to increase airflow. There are even built-in provisions to mount an IAT (Intake Air Temperature) sensor on the filter assembly, which is commonly needed on LS applications.

The filters are sized to provide excellent air flow to the engine while maintaining a compact footprint to work with tight engine compartment applications where space is at a premium. Due to the location of the filter on the front of the engine, AIRAID® also offers an optional shield to help protect the filter from dirt and debris while further reinforcing the filter mount.

Like AIRAID®'s universal filters, the new LS specialty filters are available with traditional oiled filter media in red or SyntaMax® dry media in red, blue, or black.

# PERFORMANCE SPECIALTY FILTERS

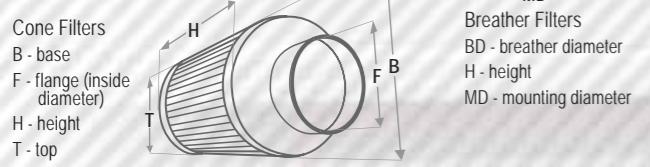

Whether you have a custom application or simply want to upgrade another brand intake system with AIRAID®'s filter technology, you are sure to find a universal AIRAID® premium filter for your needs. AIRAID® filters and breathers come in a variety of shapes and styles; simply take some measurements and use the diagrams at the bottom of this page to identify the correct filter for your application.

## PERFORMANCE OFF ROAD FILTERS

AIRAID® now offers a line of massive 16" round universal filters to address the unique needs of racers that are operating in extreme environments. These new filters are capable of keeping up with the high-flow demands of racing engines while filtering out dirt and debris. Available with a variety of heights, screens, and filter media, these new filters offer coverage for a wide range of applications. The 16" diameter filters are available with three types of filter media: – oiled, – SynthaMax® dry, – oiled cotton-only (no synthetic layer). All of the filters are available in red or blue and are offered in 3", 4", and 5" heights. Further, 4" and 5" filters are available with or without an external honeycomb-style wire screen, which adds an extra layer of protection for the filter media from rocks and debris.

Each filter is available with or without an external honeycomb style screen!

# SPECIALTY RACE DAY • TRACK DAY

High-performance engines have enormous airflow needs, and racers are always looking for a little something extra that will give them an edge over the competition. AIRAID®'s new track day and race day filters were built with racers in mind. Track day filters are designed to provide excellent airflow while maintaining particulate protection. Race day filters are for those where airflow is the main priority, but still want protection from large debris.

Track day filters feature the same quality construction as our regular air filters, including sturdy polyurethane casings, wire mesh construction, and layers of high flow cotton gauze. They are designed to provide low restriction airflow while still maintaining adequate filtration. Track day filters are shipped dry but can be oiled by the end user if desired.

SPECIALTY FILTERS

AIRAID® offers a modern approach to the standard 14" performance air cleaner. The concept II is a universal air filter assembly that is available in 3", 4" and 5" elements and is completely customizable.

Concept II is constructed of hand poured urethane that won't crack or shrink due to under hood heat. The filter is designed with extra deep pleats for more dirt holding capacity, which extends service intervals, and comes with SynthaMax® dry a 100% synthetic, non-oiled, color fast, iconic performance red media.

The most unique feature of the concept II is the beautiful lightweight aluminum lid which can be completely customized. The curved top enhances air flow and provides additional clearance for the carburetor float bowl vents, which is ideal for applications with minimal hood clearance. Along with the re-designed lid, the concept II also features a new base that enhances air flow and includes a billet tool & key fob! The concept II is "Conceptually" the perfect finishing touch to your custom ride!

## CONCEPT II

Product #	Product Description	Installed Height
801-451	Universal 3" Assembly	3.2" - .5" drop base
801-455	Universal 4" Assembly	4.2" - .5" drop base
801-461	Universal 5" Assembly	5.2" - .5" drop base

## ADDED PROTECTION

AIRAID® pre-filters are highly recommended for applications that are used in extremely dirty environments. The AIRAID® pre-filters are manufactured from a durable water resistant polyester material. With uniform micro openings that help filter out debris, dyno & flowbench testing has proven no significant loss in power or airflow using this product.

# SIDE X SIDE PERFORMANCE PRODUCTS

UTVs have taken the off-road market by storm, with performance attributes that rival those of Jeeps and other compact 4x4s. UTVs are also popular with the go-fast crowd, as their independent suspension and excellent power-to-weight ratios make them well suited to bombing down fire roads. The common denominator for side x sides is dirt, which means good filtration is critical to keeping contaminants from entering the engine and transmission. AIRAID® has developed a line of performance intake systems that improve horsepower and torque while providing excellent side x side protection to vulnerable engine components.

AIRAID® intake systems start with an AIRAID® premium filter to increase airflow and provide better filtration in dusty environments. The filter also increases service intervals for more ride time with less maintenance. AIRAID® addresses restrictions in the factory air box by replacing it with a new one-piece roto-molded air box on many applications. These air boxes help increase the amount of cold fresh air available for significant power gains. AIRAID® side x side intake kits have been dyno-tested to provide estimated increases of up to 4 horsepower!

- Bolt-On Horsepower
- High Flow Filters
- Made In The USA
- No-Hassle Warranty

**CAN-AM COMMANDER 1000**

The AIRAID® intake system for the 1000cc Can-Am Commander improves power and performance while offering superior filtration over the factory intake. The AIRAID® system utilizes a completely new air box that features a reversed hood scoop lid with a foam pre-filter. The hood scoop protrudes through the hood and provides cold air a larger, more direct route to the engine than the restrictive factory system.

Inside the air box is an oversized AIRAID® premium oiled filter, which extends service intervals while capturing contaminants that the stock filter could allow to pass through. The filter is washable and reusable, and it's backed by AIRAID®'s exclusive "no hassle" lifetime warranty!

Kit Replacement Filter

**KAWASAKI TERYX 750**

The AIRAID® Kawasaki Teryx 750 intake system dramatically increases airflow over the stock system while improving overall power and performance. In fact, dyno tests show estimated increases of up to 4 HP over the stock system!

The Teryx 750 system comes with an AIRAID® premium oiled filter as well as a pre-filter for extreme conditions. The filter is sealed safely inside a roto-molded air box with a strategically located inlet that improves airflow. No additional tuning is required, and detailed step-by-step instructions are included for installation.

**BOLT-ON  
PERFORMANCE  
INTAKES, FILTERS &  
PRE-FILTERS**

**POLARIS RANGER RZR XP 900**

The Polaris Ranger RZR 900XP AIRAID® intake system delivers more horsepower with the added benefit of less required maintenance. The system starts with an AIRAID® oiled power curve air filter, which has a concave shape to unshroud the factory velocity stacks for improved airflow.

The unique AIRAID® snorkel system allows the engine and CVT transmission to draw air from up high, away from water and trail dust. The specially molded snorkels attach to the air box and CVT transmission via large 3" diameter tubes and silicone couplers secured with stainless steel clamps. The AIRAID® intake system is completely bolt-on and comes with all of the hardware needed for installation along with detailed instructions. No additional tuning is needed; just bolt it on and ride!

## CAN-AM MAVERICK 1000

AIRAI<sup>D</sup> once again created a winning combination with the new performance intake system for the 1000cc Can Am Maverick. This new intake system improves power and performance while offering superior filtration over the factory intake. The AIRAI<sup>D</sup> system utilizes a completely new air box that features a reversed hood scoop lid with a foam pre-filter. The hood scoop protrudes through the hood and gives the Maverick a bold aggressive look while providing cold air a larger, more direct route to the engine than the restrictive factory system.

Inside the air box is an oversized AIRAI<sup>D</sup> premium oiled filter, which extends service intervals while capturing contaminants that the stock filter would allow to pass through. The filter is washable and reusable, and it's backed by AIRAI<sup>D</sup>'s "no hassle" lifetime warranty!

## TERYX 750

AIRAI<sup>D</sup> has developed a cold air intake system with a snorkel option for the Kawasaki Teryx4-750 that improves both power and filtration.

This AIRAI<sup>D</sup> Intake System starts with a new Cold Air Dam intake box that attaches to the factory intake tube. The box features a reverse-facing scoop, which enables the engine to draw plenty of cool air through a large 800cfm air filter.

This system also has a unique snorkel option that attaches to the air box via a silicone hose secured and stainless steel clamps. The snorkel places the air inlet up high, away from water and dust, and is an exact-fit for the Teryx4-750. No additional tuning is needed; just bolt it on and ride!

P/N 883-315

## POLARIS RZR 800

The AIRAI<sup>D</sup> Polaris RZR 800 intake system dramatically increases airflow over the factory intake system while improving overall power and performance. Dyno tests show estimated increases of up to 4 HP over the stock system!

The kit comes with an AIRAI<sup>D</sup> premium oiled filter to extend service intervals. The filter is sealed safely inside a new roto-molded airbox to help minimize dirt exposure. An optional snorkel attachment enables the RZR to charge aggressively through water and mud. As with all AIRAI<sup>D</sup> products, these kits simply bolt-on without any additional tuning required. UTV kits come complete with all the necessary hardware, detailed instructions and everything needed for a complete installation.

P/N 800-029

P/N 883-305

## POLARIS RANGER XP 700 &amp; 800

AIRAI<sup>D</sup> has developed a snorkel system for the popular Polaris Ranger 700XP and 800XP EFI that delivers more power while providing an easy way to keep the engine's air intake high and dry.

The roto-molded snorkel relocates the engine's air intake to the top of the rollcage, which offers protection and provides the engine with a steady supply of cold air. The snorkel assembly nests against the rollcage and attaches to the factory airbox via a specially molded coupler with a 3" diameter silicone hose.

The AIRAI<sup>D</sup> system includes a massive cylindrical air filter that is a direct replacement for the stock paper filter element. Constructed with AIRAI<sup>D</sup>'s oiled composite media, the filter extends service intervals to offer increased ride time. The filter is available with the snorkel system, or as a stand-alone item. Like the rest of AIRAI<sup>D</sup>'s product line, the Ranger systems are Made in the USA.

**THE HELIX BORE IS THE SECRET!**

Developed to enhance off-idle torque from 800 rpm to approximately 3,000 rpm, PowerAid®'s unique, patented helix bore design spins the incoming air charge as it passes through the throttle body spacer. This spinning action boosts the velocity of the incoming air and contributes to better atomization of the air/fuel mixture as the air charge enters the combustion chamber. The end result is more part-throttle torque, improved mid-range power, and overall combustion efficiency.

## POWERAID® TECHNOLOGY FOR CARBURETORS

The Poweraid® throttle body spacer works awesome on carbureted engines with its patented helix bore design, which creates a spinning action of the incoming air. By

amplifying the flow of the incoming air charge, a more efficient fuel-air mixture is achieved which boosts off-idle and mid-range torque.

4 BBL HOLLEY 4150/4160 Series Edelbrock  
Square Flange & OE Square Flange  
100-701 • CARB #D-609

Motorcraft OE  
100-702 • CARB #D-609

Holley Spread Bore, Edelbrock  
Quadrajet, OE Spread Bore  
100-705 • CARB #D-609

# Drop-In Replacement Filters

AIRAI<sup>D</sup><sup>®</sup> drop-in replacement filters fit in the factory air box and are drop-in replacements for stock paper filter elements. Constructed using the same premium materials used in our cold air intake kits, these filters offer significant improvements in air flow and filtration while being washable and reusable. Why throw money away on a paper filter each time the old one gets dirty when you can upgrade to a serviceable AIRAI<sup>D</sup><sup>®</sup> premium filter often for less than the cost of two stock replacements?

AIRAI<sup>D</sup><sup>®</sup> drop-in replacement filters require no modifications and installation is as simple as replacing a stock filter.

Part Number 800-323

## VIN Code Locations:

*Vehicles manufactured by Chrysler, Ford, and GM:*

1972-80 – Use the fifth VIN character  
1X11#XXXXXXXX

1981-04 – Use the eighth VIN character  
XX1XX11#1CC000000

*Vehicles manufactured by AMC/Eagle (except Jeep):*

1972-80 – Use the seventh VIN character  
X1X111#000000

1981-88 – Use the fourth VIN character  
1XX#X111XX000000

1989-98 – Use the eighth VIN character  
1X1XX11#1XX000000

*Vehicles manufactured by Jeep:*

1972-74 – (up to SN #100000)  
Use the eighth VIN character  
X1X11X#00000

1974-80 – (from SN #100001) –  
Use the seventh VIN character  
X1X11#100001

1981-88 – Use the fourth VIN character  
XX#X111X000000

1989-04 – Use the eighth VIN character  
X1XX11#1XX000000

P/N 790-551

**1. Clean**

**INTRODUCING  
OUR NEW DRY FILTER  
CLEANER**

**SPECIALLY FORMULATED  
TO CLEAN DRY FILTERS  
IN TWO SIMPLE STEPS!**

**2. Dry**

2. Dry - Allow filter to air dry. A fan may be used to speed up the process. DO NOT use heated air blowers, compressed air or open flame.

**3. Apply Oil**

3. Apply Oil\* - Make one careful application of AIRAID® Performance oil to each filter pleat on the outside of the filter only. Allow oil to seep into the filter for 20 minutes. Lightly re-oil any areas that still appear dry.

\*Not necessary with the SynthaMax® filters

P/N 790-558

790-550	12oz Cleaner, 8oz Squeeze Oil
790-551	12oz Cleaner, 6.25oz Aerosol Oil
790-554	12oz Cleaner
790-555	8oz Squeeze Oil
790-556	6.25oz Aerosol Oil
790-560	12oz Cleaner, 8oz BLUE Squeeze Oil
790-565	8oz BLUE Squeeze Oil
790-558	24oz Dry Filter Cleaning Solution

AIRAID® cleaning solution is uniquely formulated to clean without damaging the gauze filter media. AIRAID® performance oil forms an additional line of defense against dirt and improved capacity. Clean your AIRAID® filter every 30,000 to 50,000 miles for normal driving, or more often for off-road and heavy dust conditions.

**Check Yearly**

If your annual mileage is low, be sure to check the filter once a year to see if oiling is needed.

**Use Only AIRAID® Cleaning Solution:**

Use only AIRAID® cleaning solution to clean your AIRAID® filter. Never use gasoline, detergents, steam cleaning or parts solvent.

**Oil After Cleaning:** \*Not necessary with SynthaMax® filter

Your AIRAID® premium filter is pre-oiled and ready to use right out of the package. Always oil your AIRAID® premium filter after each cleaning.

Use only AIRAID® filter performance oil. Never use transmission fluid, motor oil, diesel fuel, or light weight oils.

**NO HASSLE LIFETIME WARRANTY**

Most AIRAID® products are backed by our "NO-HASSLE!" Warranty. Simply stated, if an applicable AIRAID® product fails for whatever reason, AIRAID® will replace it for a period of one year from the date of purchase. Further, most AIRAID filters are covered by our "No Hassle!" Warranty for the life of the vehicle. Filters that are intended for competition use (such as our Race Day and Track Day product lines) and any products that are used in racing or competition are excluded.

**CUSTOMER SERVICE**

**Product Sales:** AIRAID® products are sold through a large nationwide network of distributors as well as mail order and internet dealers. If you are not familiar with a distributor in your area, you can click the WHERE TO BUY heading on our web site or simply call one of our customer service representatives.

**Shipping:** AIRAID® ships via UPS, Fed-Ex, Priority Mail and common carrier. We make every effort to ship all orders received by 2:30pm MST the same day. All AIRAID® products are carefully packed before shipping, and any shipping damage claims must be filed with the carrier.

**Returns:** All returns require an RMA number. Call or fax your request. Not responsible for typographic errors. We reserve the right, without notice, to change any material, specification, part numbers or labeling without incurring any obligation to the buyer for past or future merchandise products.

Please note: All products and filter(s) must have the AIRAID® name on it to be eligible for warranty. AIRAID® is not responsible for subsequent damage, labor costs, freight damage, loss of time or return shipping costs. Please visit our website for detailed warranty information on each product line.

**EMISSIONS INFORMATION**

AIRAID products may not be legal for street use in the following states:

Arizona, California, Connecticut, District of Columbia, Maine, Maryland, Massachusetts, New Jersey, New Mexico, New York, Oregon, Pennsylvania, Rhode Island, Vermont, and Washington.

AIRAID products are legal for street use in most states. Intake systems are subject to governmental regulation in California and certain other states adopting the emission standards of the California Air Resources Board. In order for an intake system to be legal on a specific vehicle in California and the other adopting states, the part number must receive a CARB Executive Order (EO) number. This number makes the part legal for use only on specific years, makes and models of vehicles. A decal with CARB EO number for these parts must be displayed in the engine bay to satisfy smog inspection requirements. Products that do not have an EO number are not legal for street use in California and the above states that have adopted California Emissions Standards under Section 177 of the Federal Clean Air Act of 1970.
