COLD AIR INTAKE ON MCS

This is the first and original test we did on our stock 02 Mini Cooper S, where we did back to back dyno runs proving the intake makes 10WHP.

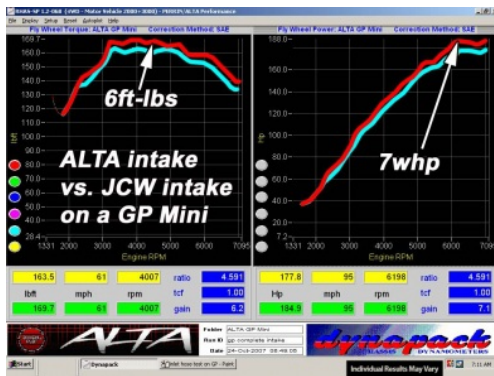

## COLD AIR INTAKE W/ 15% PULLEY ON MCS

Here is a test done on our shop MCS which had a 15% Supercharger pulley installed. You can see that the increases are even greater if you have a smaller supercharger pulley.

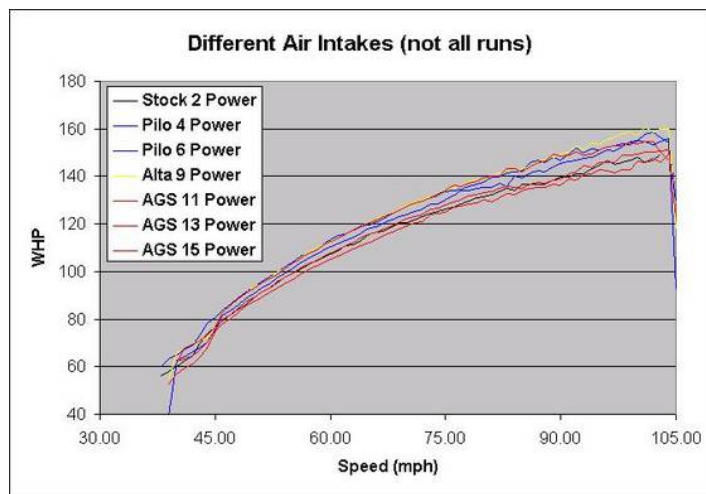

## COLD AIR INTAKE ON EURO MCS

Here is another test given to us by customer of ours. This is also from a stock MCS where nothing was done between runs but changing out the stock intake to an ALTA complete cold air intake.

## ALTA CAI VS. GP/JCW INTAKE

Most customers feel the JCW intake is just as good and makes the same power as the ALTA Cold Air Intake, but here is proof the ALTA makes more power. The 6 Wheel HP more and 6ft-lbs really shows that the more expensive JCW intake isn't worth upgrading to. Plus you get all the cool sounds of the Supercharger with our intake.

## ALTA CAI VS. THE COMPETITION

This is an independent test done in a public forum online. This test compared all the popular intakes at the time and you will see that the ALTA was the one who came out on top.
