

**Read complete instructions
before installation!
Improper installation may
void warranty**

Tools needed: Phillips
screwdriver

Step 1: Under the vehicle bed
unplug the wire harness for the
tail light.

Step 2: unclip the wire from the
plastic clips.

Step 3: Use the phillips
screwdriver to remove the two
screws holding in the tail light.

Step 4: Remove the tail light.

Step 5: Pull the wire out from
under the bed.

Step 6: Peel off the protective
cover from the resistors and
place in the two holes onto the
frame of the body.

Step 7: Plug the resistors in and
the wire harness into the circuit
board under the bed.

Step 8: Test all functions making
sure all functions work before
driving.
