

**Read complete instructions
before installation!
Improper installation may
void warranty**

Tools needed:
Phillips screwdriver

Locate the two phillips screw
and remove them

Remove the tail light from the
vehicle.

Twist off the tail light socket and
remove the stop light bulb.

Take out the new led tail light
from the box.

Place the resistor into the hole
of the tail light housing.

Connect the socket from the
new led tail light in place of
the bulb. Make sure that the
black wire on the new led tail
light matches up with the
black wire on the stock wire
harness.

Twist in the reverse light at the
bottom.

Test all functions for proper
installation before driving.
