void warranty**

Tools needed: T20 torque screw

Step 1: Unscrew the two torque screws located at the top of the tail light.

Step 2: Remove the tail light from the bumper.

Step 3: Twist off the light bulb socket.

Step 4: Pull off the tail light from the tail light socket.

Step 5: Unclip the resistor from the light and remove the plastic cover and stick on the inside tail light housing.

Step 6: Plug in the new tail light into the light bulb socket making sure the black wire lines up with the black wire on the harness.

Step 7: Connect the resistor plug into the tail light.

Step 8: Test all functions making sure they work properly before driving.

Side by side comparison of led vs bulbs.
