Part No. TTA-312

LED is the newest lighting technology offered by Auer Automotive. LED Fog Lights cast a much whiter, brighter light pattern on the road which further improves a driver's vision when compared to the Halogen light. For 2014, several Toyota and Scion models are factory equipped with LED headlights so the best choice for those vehicles would be our LED fog light kit. For many of your customers, energy efficiency will be worth considering as well. Our LED fog lights use less than 1 amp of power and they live much longer than halogen bulbs. The best light, the best vision and the best efficiency make for another easy choice.

OEM Switches

A great feature of our In-Dash Switches is the Fog Light or DRL emblem will illuminate at night to allow for easy identification of the switch. In addition, the light indicator within the In-Dash Switch will illuminate when the Fog Lights or DRL's have been turned on.
