

Premium and volume solutions by Automotive Lighting

We want to make nighttime driving equally safe as daytime driving.

We develop innovative solutions for the technological requirements of our premium and volume customers and their markets.

We make attractive design visible and set standards with intelligent lighting technologies based on Halogen, Xenon, LED and Laser systems as well as adaptive lighting systems in headlamps and rear lamps.

Frontlighting for premium and volume vehicles

Rearlighting for premium and volume vehicles

Leading technology and profound know-how

As a leader in the external vehicle lighting technology we develop innovative processes and system solutions.

From the conception – in close coordination with all carmakers – through product design, the planning process, the manufacturing up to worldwide logistics we offer optimal business strategies.

Our sales engineers are organized in dedicated customer teams. This way, we adjust to the dynamic, diverse requirements of our customers – market oriented with the highest quality.
