Preparation Before Painting / Installation

- A trial fit is recommended to ensure proper positioning and fit.
- Check fit of parts before painting as we will not accept the return of modified or painted parts.
- Wash and dry your vehicle to remove any debris and/or dirt from the installation area.

Installation Steps

NOTE: Actual application may vary slightly from illustrations.

Raise hood and clean the leading edge thoroughly, and allow to dry.

1

Test fit hood shield by centering it on the hood edge. Note where the mounting holes in the hood shield flange will be and mark with a grease pencil.

2

Installation Steps **NOTE:** Actual application may vary slightly from illustrations.

Remove the corresponding fasteners from the rubber trim piece. This is necessary in order for the hood shield flanges to slide **under** the rubber trim piece. **NOTE:** It may be necessary to remove additional fasteners in order to accommodate the flange, depending on size.

3

Position the hood shield with the flanges sliding **between** the hood and rubber seal. Align holes.

4

Insert (6) receptacles **UNDER** rubber trim and through hood shield, and then into hood.

5

Insert (6) screws through rubber trim and into receptacles and apply pressure while tightening screw to secure to hood.

6

Lower hood, adjust hood bumper stops to ensure hood shield clears grille and headlights. Install bump ons at pre-cleaned locations on the painted hood/fender surface.

7

Care and Cleaning

- Wash only with mild soap & dry with a clean cloth.
