GENERAL INSTALLATION TIP

Always refer to the manufacturers service manual for precise torque specifications on all OEM fasteners.

Installation of the AWE Tuning 991 GT3 / RS exhaust system is the reverse of the OEM exhaust removal.

Supplied 2.5" Accu-Seal band clamps are used at **Arrows A** in **Figure 1** below; along with 2.0" Accu-Seal clamps at **Arrows B**. Tighten these clamps to 40ft/lbs.

If installing the SwitchPath™ Exhaust System, assemble the driver and passenger side onto the center section. Then reuse the OEM olive clamp to install the assembly onto the car.

The 102mm exhaust tips should be installed after the car has been reassembled to insure proper alignment with the exhaust pocket in the bumper. 3.12" T-Bolt clamps are used to secure the tips into place as shown by **Arrows C** in **Figure 1**; tighten securely into desired location.

ENJOY!

CARE

Once installed properly, your AWE Tuning high performance exhaust will provide a lifetime of trouble-free performance. Please note that the exhaust volume and sound will settle with usage. 800-1000 miles is typically required to fully break in a new exhaust system.

Periodic cleaning of exhaust tips is necessary to maintain proper finish, especially in areas prone to road salt and caustic deicing solutions.

Do NOT use metal polish on our Diamond Black or Chrome finish tips. Instead, use a mild soap and water solution or gentle car wax periodically to clean the finish.
