Part# 60242/61242/62242/63242

Part # 60242/61242/62242/63242: Jeep Wrangler Radiator

When installed in a 1987-1997 Jeep Wrangler, this radiator is a direct replacement with no modifications necessary. When installed in 1998-2003 Jeep Wrangler the OEM Clutch fan assembly must be replaced with an electric fan upgrade. At this point a Be Cool Radiator Module or Electric Fan is a good option as you will get matched components for ease of installation and optimum performance as radiator is thicker than stock or aftermarket radiators and clutch of fan will come into contact with the radiator core. When using electric fan on 1997-2003 it will require you to also delete stock fan shroud which will require a relocation of coolant recovery tank or upgrade to a Be Cool Aluminum tank.
