WATER PUMPS

What makes a Beck/Arnley water pump different? Our water pumps include everything you need for the job, including seals and/or gaskets depending on OE specification. The majority of our water pumps come with a metal impeller, which are more durable and don't breakdown like the standard resin impellers. We also offer water pumps with the complete housing. This saves you installation time, and allows for peace of mind knowing you have a new housing unit.

BECK/ARNLEY

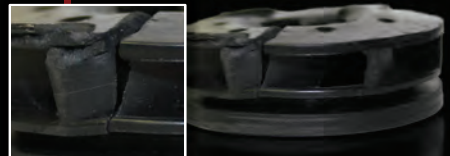

BMW Water Pump (w/ Metal Impeller)

Beck/Arnley offers metal impellers on water pumps versus a typical resin impeller which has a much higher deterioration rate. The deterioration of a resin impeller can damage the vehicle's cooling system.

Original Equipment

BMW Resin Impeller (Deteriorated)

This OE resin impeller cracked and disconnected from a BMW water pump over time causing severe damage to cooling system.

Highlights

- Beck/Arnley offers 97% Coverage on water pumps up to and including 2013.
- Majority of Beck/Arnley water pumps come with metal impellers, not resin. Resin impellers can be susceptible to deterioration over time.
- Beck/Arnley water pumps also include seals and/or gaskets depending on OE specification.
- All Beck/Arnley water pumps are OE Quality.

DID YOU KNOW?

When you change your water pump, it's a good time to check the timing belt and tensioner. The antifreeze should also be changed. We recommend replacing the fan clutch to prevent heating problems. **Approximately 50% of engine problems** are a result of cooling system failures that can be avoided with proper maintenance, proper coolant and replacement of critical components.
