IGNITION COILS

Since Direct Ignition Coil Systems are found on the majority of the V10 (Vehicles in Operation) population, it only makes sense that your coil sales are increasing. Many modern engines are now equipped with "coil on plug" technology, (each spark plug has its own separate ignition coil). This coil is connected directly to the spark plug by a rubber boot. This allows the coil a longer time to accumulate a charge between sparks, and therefore a higher energy spark.

COIL ON PLUG TECHNOLOGY

FEATURES

- Meets or exceeds OE specifications for durability and performance.
- 100% Tested to meet OE specifications
- If OE has Resistor in the coil, Beck Arnley Coils will also have the resistor.
- Quality and performance matched to OE Long Life and high performance.
- All coils are mold type coils.
- Instruction Sheets included where applicable for ease of installation.

BENEFITS

- Reasons to buy Beck Arnley Coils – Quality, Reliability and Peace of mind.
- Each coil is wrapped in protective sheeting for shipping purposes.
