

GRIP RITE

NO-DRILL TRUCK TOOL BOX MOUNTS

Don't drill holes in your truck!

MOUNTING INSTRUCTIONS

1. Attach the included adhesive foam pads to the upper part of each Grip Rite® half (Fig. 1).
2. Holding the two Grip Rite® halves together, partially thread the 5/16" bolt through the center hole, then set aside (Fig. 2). Repeat for second pair of Grip Rite® halves.
3. Using a tape measure to place each Grip Rite® in a location approximately 20" (26" for wider boxes) from the front of the truck bed, that will align under the tool box "wings". Loosely attach the Grip Rites® to the truck bed rails. Do not tighten.
4. Set tool box in position over the Grip Rites® on the truck bed rails. Make certain that the open lid will not strike the cab. Align the box to be square with the truck bed.
5. For toolboxes without pre-punched mounting slots, see steps 6 and 7. For most Better Built® brand toolboxes, skip to step 8. (Excludes Side Mount and Top Mount boxes)
6. Mark Grip Rite® mounting hole locations on the bottom of the tool box with a felt tip pen (Fig. 3). By adjusting the Grip Rite® location on the truck bed rail, it can be aligned with the locations marked.
7. Remove the tool box and drill 3/8" holes in the marked positions through the box only.
8. Tighten the Grip Rites® to the truck bed rails. DO NOT OVERTIGHTEN. Place tool box in position and align drilled holes or mounting slots with Grip Rite® mounting holes.
9. Insert hex head screw through fender washer and tool box, into the Grip Rite® body (Fig. 4). Tighten with included hex wrench. Most tool boxes can utilize the Grip Rite® mounting system. You must measure the offset locations carefully and drill the 3/8" mounting holes 3 3/8" apart. Better Built® includes specific installation instructions with the different styles of truck boxes it manufactures.
10. The installation of truck bed accessory is now complete!

Note: Over the rail bed liners will require cutting a 4 1/2" x 3" hole to accommodate Grip Rite®

Part No. 29510402
