

Cat-Back[™] Exhaust Installation 140261, 140262

Thank you for purchasing a Borla Performance Cat-Back[™] Exhaust System.

Borla Performance Cat-Back[™] Exhaust System (Part number 140261, 140262) is designed for the Mini Cooper-S & Mini Coupe-S equipped with a 1.6L Turbocharged 4-cylinder engine, front-wheel drive and automatic or manual transmissions.

Borla Performance Industries recommends that an exhaust shop or professional after market parts installer perform the installation of this system. However, if you decide to perform the installation on your own it is recommended that two people are used. This installation should not be performed by one person due to the risk of injury. Ensure the installers use all under car safety precautions including eye protection.

Please take time to read and understand the following...

By installing your Borla Performance Exhaust System, you indicate that you have read this document and you agree with the terms stated below.

It is the responsibility of the purchaser to follow all installation instruction guidelines and safety procedures supplied with your Borla Performance Exhaust System

Borla Performance Industries assumes no responsibility for damages occurring from misuse, abuse, improper installation, improper operation, lack of responsible care, or all previously stated reasons resulting from incompatibility with other manufacturer's products and/or systems.

Minimum Required Tool List:

TOOLS:

1. 3/8" Drive Ratchet
2. 3/8" Drive Extension 3"
3. 15mm Socket
4. Pry Bar
5. Chain style pipe cutter or reciprocating saw

SHOP SUPPLIES:

- 1 Spray Lubricant

Borla Performance Cat-Back™ Bill of Materials

Caution!!! *Never work on a hot exhaust system. Serious injury in the form of burns can result* If the vehicle has been in use and the exhaust system is hot, allow vehicle to cool for at least 1 hour. Always wear eye protection when working under any vehicle.

Note: It is our recommendation that you use a hoist or hydraulic lift to facilitate the installation of your new Borla Performance Cat-Back™ Exhaust System.

Taking all under car safety precautions, lift the vehicle using a hoist or hydraulic lift. Once this has been done, you may begin the removal of your old exhaust system from your vehicle.

Note: Before removing the original exhaust system from your vehicle, please compare the parts you have received with the bill of materials provided on the previous page to assure that you have all the parts necessary for the installation of your new Borla Performance Cat-Back™ Exhaust System.

Original Exhaust System Removal

Note: With a used vehicle, we suggest a penetrating spray lubricant to be applied liberally to all exhaust fasteners and allowing a significant period of time for the chemical to lubricate the threads before attempting to disassemble.

1. Measure and mark 4 inches ahead of the front muffler. (See Fig. 1)
2. Using a reciprocating saw or a chain style pipe cutter, cut the exhaust at the mark. (See Fig.2)
3. Unbolt and remove the center support. (See Fig. 3) Place the hardware to the side for use during the installation of your new exhaust system.
4. Lubricate all the hangers and rubber isolators .
5. Using a muffler stand or an additional person to hold the exhaust in position, remove the hangers from the rubber isolators and remove the exhaust from the vehicle. (See Fig. 4)

Warning: Use extreme caution during installation. Torque all fasteners according to manufacturer's torque values and tightening sequence. DO NOT use air impact tools to tighten fasteners on Borla Performance Exhaust Systems. Use of such tools may result in bent flanges or gasket contact areas leading to exhaust leaks.

Figure 3

Borla Performance Cat-Back Exhaust System Installation

1. Place a clamp over the expanded end of the front muffler assembly and set it into position Do Not tighten the clamp.
2. Using the original hardware, install the center support. (See Fig.5)
3. Place a clamp over the expanded end of the rear muffler assembly and set it into position making sure to install the hangers into the rubber isolators. Do Not tighten the clamp. (See Fig. 6)
4. Check your exhaust system for proper clearance under the vehicle and also for tip alignment.
5. Once position has been determined to be correct, tighten the Accuseal clamps to 32-35 ft. lbs. **IMPORTANT: Make sure the clamp bolt is positioned between the pipe notches NOT over the pipe notches.** (See inset)
6. Before starting your vehicle, make sure to check all wires, hoses, brake lines, body parts and tires for safe clearance from the exhaust system.
7. Start vehicle and check for any leaks. If any leaks are found, determine cause (such as loose or incorrectly positioned clamp) and repair as necessary.

Note: When you first start your vehicle after the installation of your new Borla Performance Exhaust System, there may be some smoke and fumes coming from the system. This is a protective oil based coating used in the manufacturing of mandrel bent performance exhaust tubing. This is not a problem and will disappear within a very short period of time after the exhaust has reached normal operating tem-

Congratulations!!! You have completed the installation of the world famous Borla Performance Stainless Steel Exhaust System.
