INTAKES AND COMPONENTS

DREAM. BUILD. DRIVE.[™]

THROTTLE BODY SPACERS

- Designed to increase mid-range torque with the added benefits of faster acceleration and quicker throttle response
- Engineered with a slight peak on the leading edge of the entry point into the intake manifold, increasing the speed of the air entering the intake manifold which increases the internal pressure, creating additional torque and horsepower at lower RPM.
- Also acts as a throttle body spacer which increases the volume of air inside the manifold adding even more power.
- Includes all necessary gaskets and hardware to bolt directly to the factory components
- Can usually be installed in less than an hour using common hand tools with no drilling or cutting required
- Manufactured from quality machine finished aluminum
- Application specific - bolts directly to factory components
- 50 state legal - CARB exempt E.O.# D-629-5

MODULAR AIR INTAKE SYSTEMS (M.A.I.S.)

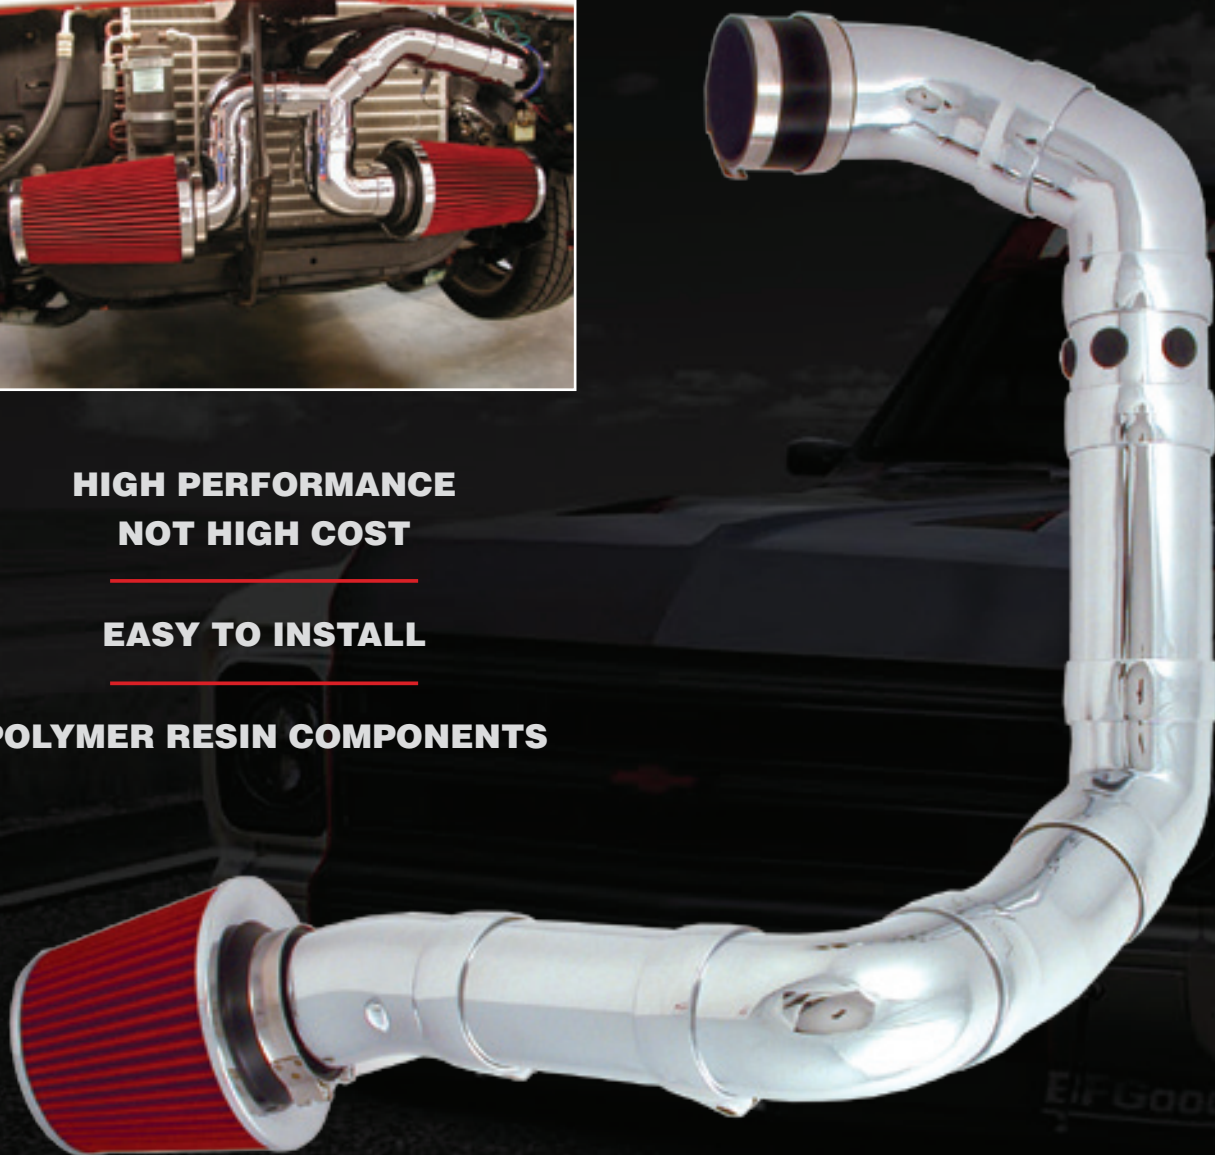

- The Modular Air Intake System (MAIS) is an innovative clamp together system that allows you to add a cold air or short ram air intake system to practically any car
- Since the system is modular, the tubes can be combined in nearly infinite combinations and arrangements to bring cold air to hundreds of vehicles that would otherwise require a custom system
- To capitalize on the benefits of a cold air intake, we use a base material of an engineering grade co-polymer ABS with the low heat absorption characteristics and triple chrome plate the surface to help deflect heat.
- The finished chrome surface also allows for easy cleaning for a great looking appearance

To determine correct replacement hose size, remove existing hose and measure each end for inside diameter. Next lay the hose as flat as possible and measure length. Hoses can be cut up to 1-1/2" on each end for exact sizing. If the old hose is not available, measure the outside diameter of your radiator, thermostat and water pump outlets. Then, using some old heater hose or similar material, mock-up the hose shape using smooth curves as needed. Allow hose to overlap outlets by 1-1/2" to 2" on each end and trim. With the mock-up flat, measure the overall length. Order the closest size hose from one of the charts on this page.

EMISSIONS STANDARDS AND SMOG TESTING

Some intake systems are not legal for use on certain vehicles in California or other states adopting CA emission standards. See the application section of this catalog for information on a particular vehicle. For an intake system to be legally used on the street in California or states adopting California emission standards, the intake must receive an EO number from The California Air Resources Board (CARB) that is specific to a particular part on a specific vehicle. This means a specific part number can be CARB exempt for some vehicles and not others. Intake system/vehicle combinations that do not have a CARB EO are not legal for highway use in California and several other states. They will not pass a state regulated visual inspection test if they do not have a valid CARB EO decal clearly displayed on the vehicle. You can check with your local motor vehicle or emissions agency to determine if your state requires CARB exemption. If you have questions about the legality of an Spectre intake system on your vehicle, please visit SpectrePerformance.com or contact us at 800-992-3000.

INTAKE HORSEPOWER ESTIMATES AND DYNO TESTING

Spectre performs tests to measure vehicle power on a dynamometer before and after an air intake is installed. Our air intake horsepower estimates are based on the results of specific or similar vehicle testing. Sometimes an air intake will fit several vehicles or different years of the same model. In these cases it is not practical to test every application so our horsepower estimates are based on similar vehicles where we believe the horsepower estimates are reliable.

Horsepower measurements can vary some from day to day due to environmental conditions, the dynamometer used, and the vehicle's on-board computer adjusting to changing airflow or environmental conditions.
