ORGANIZATION RIGHT WHERE YOU NEED IT, IN THE BAY!

The Branick 2400 Tool Station is the perfect way to keep your tire service tools organized and in easy reach. Designed for one or two bay use, there is a slotted tool rack on both sides. The 2400 has a 1/4" airline connection to supply the two built in swiveling coiled hoses that stay off the floor and out of the way. Each station is also equipped with two universal impact gun cradles. The upper and lower trays are perfect for additional storage or holding small parts. To make sure it stays put, the solid steel 2400 can be bolted to the floor through the pre-drilled base plate holes. As with all our products, the 2400 is manufactured at Branick's facility in Fargo, ND to give you American made quality and toughness.
