

ecological  
MANUFACTURING

## MAKE YOUR IDEA A REALITY

Creating new innovative products is what we do and we can help bring your great ideas to reality too! By doing the vast majority of our manufacturing in house, we have become experts in many aspects of the product creation process. We build our own molds from scratch, mold our own plastic parts, and trim products to fit specifications. With our knowledge and experience, we can help perform every manufacturing process to turn your idea into a successful product. We specialize in getting new ideas to market at the lowest investment and economical part cost.

## THERMO-FORMING

Our equipment can accommodate large molds and can combine thermo-forming and pressure-forming for excellent definition. Our methods have been tuned to help combat many common thermo-forming issues such as chill marks, and other visual defects.

## MOLD BUILDING

We are very experienced in the field of creating molds and tools for vacuum forming machines. Through "educated" trial and error, aka R&D, we have developed techniques that create long-lasting, high quality molds that form the best possible end product.

## FABRICATION AND DESIGN

Our team can provide basic manufacturing processes such as cutting, trimming to specifications, finishing, and boxing. We can also provide insight into product design as needed.
