

How to Use:

1. Make sure wheel or surface is at temperatures between 70-80F.
2. When wheel is mounted on vehicle, start spraying from bottom to top to avoid product running down wheel and possibly streaking the surface.
3. Typically scrubbing is not required, but for stubborn brake dust and grime stains scrubbing may be needed
4. Hose product in approximately 2 minutes, rinsing thoroughly to avoid streaking.
5. Dilute with water at 50/50 ratio for milder cleaning action on highly polished surfaces or clear coated wheels.

Benefits:

- Removes oxidation, brake dust, and grime
- Clean surface quicken polishing process-shine comes up much faster with oxidation removed
- Removes water spots
- Leaves uniform surface finish-"clean luster"
- Excellent on mill finish and diamond plate non- polished surface or use on highly polished surfaces or OEM clear coated wheel (at 70-80F) to remove brake dust and road grime.

When it comes to quality auto detailing & care, Busch is the brand you can depend on.
