

INSTRUCTIONS *for* 5' BUNKBOARD GUIDE-ONS

- Bunkboard Guide-Ons are most helpful when fitted close to the boat and mounted as far to the rear of the trailer as possible.

- Height can be adjusted by mounting the uprights on top or underneath the frame.

- Swivel brackets and holes in the uprights provide adjustment to best fit the bunkboards to the shape of the boat.

- Uprights may be mounted with both uprights behind the fender, or they may be mounted straddling the fender as shown.

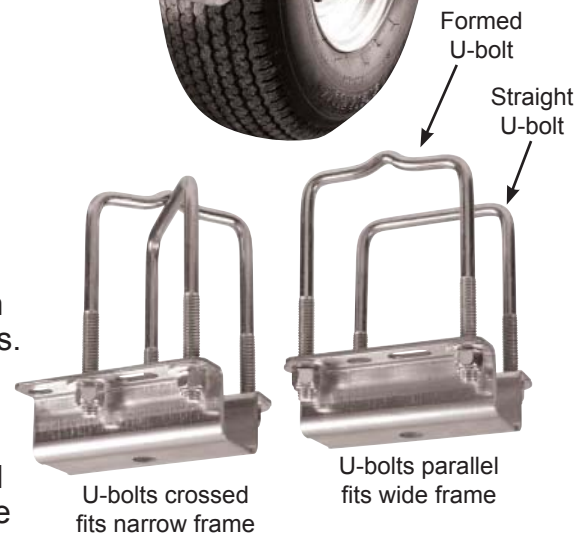

Tools Required:

- 2 9/16" wrenches
- 1 #3 Phillips Screwdriver

INSTRUCTIONS:

1. Select the best four upright mounting locations with no interference issues by resting an upright against the frame and moving it close to the side of the boat at all possible mounting locations.
2. Loosely assemble a bracket at each selected mounting location using one straight U-bolt and one formed U-bolt, washers and nuts.
3. Slide all four uprights into brackets, the end with holes up.
4. Continue tightening U-bolts until the uprights are loosely seated and level on the frame with the uprights standing about 4" from the boat.
5. Hold a bunkboard between the upright and the boat. Choose where the swivel brackets will be screwed to the bunkboard. Hold one in place, lay the bunkboard on the floor and screw the bracket to the bunkboard.
6. Return that bunkboard to the uprights. Position and hold the second swivel bracket. Then lay the bunkboard on the floor and screw it in.
7. Return the bunkboard to the uprights and bolt the swivel brackets to the uprights.
8. Adjust the fit and straighten the alignment, then fully tighten everything and pound the end plugs into the top of the uprights.
9. Repeat for the other side.

Fits frames up to 3" wide x 4-1/4" tall.

REPLACEMENT PARTS:

p/n	Desc	Qty
27609PG	Upright	4
27821	Bunkboard	2
10201PG	Swivel Bracket	4
