# MIDMOUNT PLATE INSTRUCTIONS

Applies to

Part #'s: 3699, 3704, 3706, 3707, 3709

## INSTALLATION:

- 1... Make a cardboard template of the mid mount plate (you can use the box it is packed in), and fasten template to rear of engine.
- 2...Place engine in chassis in whatever location is necessary, taking care to preserve proper engine alignment with the rear.
- 3...Carefully mark and trim the cardboard to fit the chassis.
- 4...Using the cardboard as a template, trim the plate accordingly.
- 5... Mount the midmount plate on the engine and recheck fit.
- 6...Clamp the mounting brackets to the rear of the plate and tack weld to the chassis. (Mounting kit #3705 which includes brackets and hardware is highly recommended).
- 7... Remove the plate and finish welding the brackets in place.
- 8...While the engine is out of car, mount the starter with midmount plate in place to be sure that it clears. Grind clearance if necessary.

## RELATED COMPONENTS:

1. Mounting Kit (#3705) is necessary for correct installation.
2. Front motor plate is highly recommended for correctly mounting the front of the engine.
