

## About This Applicator

If you like shining your tires but hate getting grease and dressing all over your fingers, then the Contour EZ-Form Applicator is the right pad for you! Only this unique applicator pad mounts a soft durafoam applicator pad on a sculpted no-mess handle. This plastic handle features finger grooves to prevent slippage, and blocks dirt, grease, and grime from getting into your fingertips, underneath your nails, and protects your knuckles from scraping on sharp car parts. The Contour EZ-Form Applicator is easy to grip, which helps anyone with arthritis or weaker grip strength detail their car and get the job done. Keep one Contour EZ-Form Applicator for tires and trim, one for exterior paintwork, and one for interior seats and upholstery. Spread your favorite dressing on tires, bumper trim, window moldings, side-view mirrors, and engine parts without getting your fingers dirty. Spread a coat of wax over paintwork, glass, and shiny metal parts without wasting a single drop. Work leather conditioners into fine leather upholstery and seats to keep interior pieces supple, soft, and free from cracks and breaks. Make detailing EZ again with the Contour EZ-Form Applicator Pad, and protect your car inside and out without any greasy messes.

## Good Applicators Save Dressing And Product

Contour EZ-Form Applicator Pads conform to the surface and spread a perfect thin coat of your favorite tire shine, wax, or leather conditioner. The most common detailing mistake is using too much product. A thicker coat of wax doesn't "work better" because anything that is not directly touching the paint is wasted. Once you buff off the residue, it all comes off without bonding to the surface. You need an applicator pad that spreads a thin, even coat in just one pass for maximum efficiency. The Contour EZ-Form Applicator spreads a thin, even coat of your favorite product thanks to the dense Durafoam formula. The plush soft foam conforms over every surface to spread the perfect amount of product in just one try. With the right applicator pad, one bottle of tire shine dressing can last for dozens of detail jobs! Save product and save money by using the right tools for the job like the Contour EZ-Form Applicator Pad.

## Get A Grip And Make No Mess

Grab a firm grip onto the Contour EZ-Form Applicator, then guide it over any thin body line, curve, and edge with total precision. Coloring in the lines is a valuable skill when detailing! Spreading a coat of wax or sealant can turn into an expensive mistake when sloppy technique puts the creams on porous plastics where they don't belong. Only dressing should go on textured plastic trim on bumpers, doors, and windows. Wax, glaze, sealant, and polish can permanently stain and discolor these rubber and plastic pieces, and ruin the clean look of any automobile. Control the applicator and rub the perfect amount of wax into paintwork without touching any trim on accident. Maintain clean lines when detailing, and do the job right the first time without undoing any messy work with the Contour EZ-Form Applicator Pad.

## Wash And Reuse Again And Again

Cheap applicator pads are hard to clean, and break down quickly. The durable premium Durafoam of the Contour EZ-Form Applicator Pad lasts through dozens of full car waxings, and hundreds of tire shine applications. The trick is proper maintenance between extended uses for a clean spread on every swipe. Once the EZ-Form Applicator Pad fills up with spent product or oily residues from tires and engine bays, soak them in Chemical Guys Polishing Pad Cleaner, then rinse thoroughly and let air dry. The gentle citrus cleaners will break down and release any creams and oil dressing gels from deep within the porous foam, and finish clean with the same soft feel from new. Avoid cross contamination between different areas of the vehicle, and keep a Contour EZ-Form pad for each region: paint, interiors, and tires. Clean and maintain EZ-Form Applicator Pads for the best spread of any product over any part of the vehicle.

## How To Use:

- Prepare the surface with the appropriate cleaning/detailing/polishing steps first.
- Prime the Contour EZ-Form Applicator Pad with 2 - 4 lines of preferred product.
- Spread over the surface and work into a uniform, thin, and even coat over a large area.
- Add 3 - 5 dots of product as needed and continue until the entire piece is coated as desired.
