

About The TORQ Foam Cannon Snow Foamer

The TORQ Foam Cannon Snow Foamer cleans any vehicle with concentrated foam power. The TORQ Foam Cannon Snow Foamer is specially-tuned to spray thick foam with enthusiast-grade pressure washers. Now home users with power washer models that produce as low as 500 PSI can keep up with professional car detailers with thick car wash foam. Thick snow foam helps remove dirt from even the smallest cracks and crevices, and is the perfect way to reduce swirl marks and maintain a flawless finish at every car wash. The TORQ Foam Cannon Snow Foamer is built with the highest quality materials for heavy duty use with any pressure washer. Solid brass components resist corrosion and rusting that ruins cheap imitation parts, and high quality plastics reject harmful UV rays that cause cheaper units to crack and break. TORQ engineers fitted every Foam Cannon with a large 32 oz. fluid tank and fully-adjustable sprayer nozzle to ensure full foam coverage on any vehicle, large or small. Poorly designed cheaper foam cannons have bare brass threads that tear up soap bottles over time. The TORQ Foam Cannon Snow Foamer features the patented TORQ Threadlock System on the threads, which saves bottles from early wear and tear. The unique air-injection system combines the perfect amount of car wash shampoo, water, and oxygen to create thick soapy foam that clings to any vehicle's paintwork. Snap the new TORQ Foam Cannon Snow Foamer onto any pressure washer, and turn a normal car wash into a fun foam bubble bath!

How It Works

Professional detailers and hardcore enthusiasts wash dirt from cars as gently as possible. The wrong touch pushes dirt around and grinds ugly scratches and swirls into the shiny finish. The TORQ Professional Foam Cannon Snow Foamer adds a blanket of super-slick and slippery car wash suds to lubricate any abrasive dirt particles. Prepare the TORQ Foam Cannon by filling the soap solution tank with water, then add 1 - 3 ounces of your favorite Chemical Guys car wash soap. Gently rinse down the car with water to remove any loose debris and grime, then attach the TORQ Foam Cannon Snow Foamer and cover the car with soapy suds. Fine tune the soap mixture knob to the desired foam thickness, and adjust the front fan nozzle to the perfect spread to quickly cover any vehicle. The bubbly soap begins to break down and lift stuck-on dirt and grime from the surface of the vehicle, surrounding it in slick car wash soap lubricants. As the foam slides down, it gently pulls the dirt to the ground before the detailer even touches the surface with a wash mitt. Add the TORQ Professional Foam Cannon Snow Foamer to any two-bucket car wash, and drastically reduce the chances of installing any swirls or scratches during any car wash or full detail.

Precision Technology And Quality Build Materials

The refined air-injection system of the TORQ Professional Foam Cannon Snow Foamer produces thicker car wash foam for a scratch-free washing experience. Precision-machined components blend high pressure water, air, and car wash soap into a slick foamy solution. Upgraded internals help produce thick soapy foam even with lower-end pressure washers that pump out only 500 PSI. The pressurized foam is channeled through a fanning nozzle to spray a vertical beam of foaming suds over the side of any vehicle. TORQ engineers designed the Professional Foam Cannon with corrosion-resistant brass and stainless steel components that will not rust, tarnish, or break with repeated use. Chemical-resistant seals and O-rings stand up to any Chemical Guys car wash soap and ensure leak-free operation during any detailing job. High-grade high-density plastics stand up to car washing chemicals and exposure to sunlight while out on any job. The exposed brass threads of the foam cannon lance are insulated with a softer plastic liner, protecting the threads of the soap solution bottle to ensure years of reliable use. Universal fittings ensure the TORQ Foam Cannon is compatible with any gas or electric pressure washer. Detailing professionals and hardcore enthusiasts all choose the TORQ Professional Foam Cannon Snow Foamer for its build quality, dependability, and ease of use in any car washing system.

TORQ Threadlock System Design Innovation

The TORQ Foam Cannon Snow Foamer is engineered and refined with TORQ patent-pending Threadlock System, a foam cannon industry first! The unique injection-molded sleeve insulates the delicate plastic bottle threads from the machined brass components. This innovative feature ensures a perfect seal, maintains internal pressure inside the bottle, delivers the thickest car washing foam, and prevents the bottle threads from stripping. The TORQ Threadlock Sleeve helps contain the high pressure within the foam cannon system to create the thickest car wash foam with minimal product usage, and lower operating pressures. Click the new TORQ Snow Foamer Professional Foam Cannon onto any pressure washer, and turn a normal car wash into a professional foam detail.

The Best Wash Results

Turn any mundane car wash into an exciting foam party! The TORQ Professional Foam Cannon Snow Foamer adds extra lubrication where it needs to be: directly on paintwork, dirt, and debris. The thicker the foam, the better it sticks to dirt, breaks it down, and slides off the car before even being touched with a wash mitt. Pre-saturating vehicles with thick wash foam during a wash drastically reduces the chances of installing swirls and scratches caused by improper washing. TORQ Professional Foam Cannon Snow Foamer will transform the way you wash your car forever.

Universal Pressure Washer Fit

The TORQ Foam Cannon Snow Foamer works with any pressure washer design. It uses a standard universal thread that easily accepts any universal pressure washer attachment fitting. If the included fittings does not fit your pressure washer wand, consult the pressure washer manufacturer for the correct fitting attachment.

- Pressure Washer Attachment
 - The TORQ Snow Foamer Foam Cannon ships with a standard 1/4" Quick-Connect Plug
 - Quick release connects Foam Cannon to pressure washer wand
 - Screws directly into foam cannon unit (add some teflon tape for watertight seal)
 - The TORQ Foam Cannon accepts any 1/4" male attachment fittings

More Reasons To Love The TORQ Foam Cannon

The TORQ Professional Foam Cannon Snow Foamer is the perfect solution to wash any size vehicle using snow foam technology. The advanced air-injection system is efficient and safer for painted finishes. Combining the foam cannon with a pressure washer uses less water than a traditional garden hose and bucket wash. The TORQ Foam Cannon conserves water and helps prevent unnecessary wastewater runoff. Snow Foam Technology clings cleaning soap to vertical panels for the ultimate wash lubrication. The TORQ Foam Cannon can be used as a 'touch-free' wash on dusty or lightly dirty vehicles. Fully adjustable vertical jet nozzle allows precision control to create the perfect wash foam spread for any vehicle, large or small. Precision air-injector controller knob gives fine-tunable adjustment over the foam mixture thickness. Snow Foam Technology will transform the way you wash your car forever.

Tech Specs

Consult your pressure washer manufacturer for any replacement parts or attachment fitting changes.

- Required Electric or Gas Pressure Washer
 - Minimum 500 PSI; Maximum 3,500 PSI; Never Exceed 4,200 PSI
 - Minimum 1.4 GPM; 2.0 GPM recommended; Never Exceed 5.3 GPM
 - Soap Solution Bottle Capacity: 32 US oz.

How To Use:

- Unscrew fluid tank from foam cannon unit.
- Fill fluid tank with water (for best results, use warm water.)
- Add 1-3 ounces of your favorite Chemical Guys car wash shampoo to the fluid tank.
- Attach fluid tank to foam cannon unit.
- Rinse car with water to remove loose debris and grime
- Reattach bottle and attach TORQ Foam Cannon to pressure washer wand
- Cover car with thick car wash foam to lift and lubricate stuck-on dirt from the surface
- If needed, Proceed with 2-bucket car wash method to gently remove any dirt without installing any swirls or scratches
- Rinse car clean, then dry with premium microfiber towels

Maintaining The TORQ Professional Foam Cannon Snow Foamer

- Rinse soap solution bottle clean with fresh water
- Run plain water through the foam cannon under pressure to purge detergent and soap from the internal components
- Cycle with warm or hot water to break down thick soap residues
- Unscrew soap solution bottle and allow to air dry, then reattach before storing
- Store the TORQ Foam Cannon in a cool dry place out of direct sunlight

**Note: Some pressure washers require an additional adapter to be used with this foam cannon.
