

## How It Works

There's nothing as smooth, soft, and silky as fine leather car seats. The only problem is it seems like leather upholstery never feels or smells like it did brand new, and it only gets worse as the years tick on. Keep your leather seats, upholstery, and accessories clean with Chemical Guys Leather Cleaner. The gentle cleaner removes dirt, grease, body oils, sweat, food residues, and light stains from all types of fine natural leather, durable sealed leather, and synthetic leather materials. Brand new leather does not look shiny or feel slippery: it's the buildup of body oils, grease, grime, and filth that gives leather a glossy appearance. Chemical Guys Leather Cleaner lifts and separates grease and dirt from deep within the pores of the material, ensuring a thorough cleaning job. The clear formula is non-caustic and contains no petroleum products that could dry out or stain leather upholstery and accessories. Follow every leather cleaning with Chemical Guys Leather Conditioner to nourish, moisturize, and protect leather so that it may look and feel its very best for years to come. Chemical Guys Leather Cleaner is the professional's secret for cleaning car seats, steering wheels, shift knobs, and even accessories and apparel like boots, shoes, handbags, purses, stick bags, wallets, and office chairs. Breathe new life into your leather and restore the natural look and feel of soft leather by starting every leather detail with Chemical Guys Leather Cleaner.

## Clean, Then Condition

People who shower daily and keep clean are great! Here at Chemical Guys, we encourage our employees to shower daily. We recommend that you wash yourself at least once a week, and maybe more if you're feeling frisky. If you enjoy clean skin, why not clean leather? Leather was once the skin of an animal, so leather care is much like skin care. To properly nourish and protect leather, you must first clean away any oils and impurities with Chemical Guys Leather Cleaner. Follow up with Leather Conditioner or Leather Serum to restore a soft, supple feel, protect against the harsh UV sunlight, and help prevent cracking and fading. Chemical Guys Leather Conditioner nourishes natural tanned leather hides and synthetic materials to prevent them from drying out, cracking, and fading from regular use. Leather Serum replenishes essential nutrients like Vitamin E that are regularly depleted by the elements, and helps protect against harsh UV sunlight. Start it all by first cleaning any impurities and filth from the surface with Chemical Guys Leather Cleaner.

### How Is Leather Made And How Do You Care For It?

Leather is a durable and flexible material created by tanning animal rawhide and skin. Proper leather cleaning and conditioning keeps well-used leather smooth, supple, and vital for decades. Inexperienced detailers typically use products formulated for cleaning exterior car parts or petroleum-based solvents that dry leather surfaces, which leaves them vulnerable to cracking and fading. Proper leather care regimens consist of regular leather cleanings and routine conditionings with gentle products formulated just for leather. Chemical Guys Leather Cleaner is a gentle water-based cleanser that removes filth stuck to the surface of leather without harming the material itself. The natural fibers of leather will break down with the passage of time, harsh elements like UV rays, sulfurous and nitrous pollutants in the air. When you take care of leather, it is important to clean the leather first before you condition it. After all, you don't put lotion on your skin before taking a shower! Chemical Guys Colorless & Odorless Leather Cleaner penetrates deep into the pores to lift up the dirt and dust for easy clean-up. Cleaning the dirt and grime is the key to protecting leather. Natural dirt buildup combined with the friction of getting in and out of the vehicle creates wear and tear and irreversible damage. For best results, follow up with [Chemical Guys Leather Conditioner](#).

### Versatile Formulas Work Just About Anywhere

Chemical Guys leather care products aren't just for the leather in your car. Water-based products like Chemical Guys Leather Cleaner and Leather Conditioner work throughout any car, home, office, and anywhere fine leather needs attention. Use Leather Cleaner and Leather Conditioner on fine natural leather, durable sealed leather, versatile synthetic leather upholstery, leather clothing and apparel, leather accessories, bags and saddles, shoes and boots, jackets and pants, couches and chairs... the possibilities are endless! Clean, maintain, and protect any type of natural or synthetic leather material with the full Chemical Guys Leather Care product lineup.

**Dilution Ratio**

## Leather Cleaner

Ready to use at full strength for exceptionally dirty surfaces.  
Dilute up to 6:1 for lighter cleaning jobs.

### How To Use:

Start by cleaning dirt, grease, and body oils from leather surfaces.

- Always test new leather care products on an inconspicuous spot to check for colorfastness and desired results.
- Pair Chemical Guys Leather Cleaner with the Horsehair Leather Cleaning Brush.
- Spray Leather Cleaner directly into brush bristles and scrub dirt and filth from the affected area.
- Wipe up excess cleaner and loosened filth with a premium microfiber towel.

Follow by conditioning leather parts to keep them looking and feeling supple and new.

- Spread 1 - 3 lines of Chemical Guys Leather Conditioner on a premium microfiber applicator pad.
- Spread the Leather Conditioner cream evenly over the workpiece, then massage deep into the hide like rubbing lotion into the skin.
- Buff off any excess product to restore a soft, smooth, and silky feel.
