

## Restore Deep Black Shine

Chemical Guys Blue Guard restores faded plastic and rubber trim pieces to a dark high gloss shine. Blue Guard penetrates deep to enhance, restore, and protect exterior trim. Nobody likes nasty faded trim! Chalky, white, and grey trim bring down the look of any car, and make it appear old and neglected. Use Blue Guard on faded bumpers, fender flares, door trim, weatherstripping, mirrors, window moldings, rocker panels, tires, louvers, and more. Blue Guard features UV solar protection that helps prevent fading and discoloration. Solar rays can also degrade these materials at a molecular level, making them brittle and crack. Blue Guard moisturizes and nourishes chalky white and grey plastic and rubber trim with essential oils to help them last longer. Advanced waterproofing agents lock in the product to protect against future fading and discoloration. Blue Guard finishes dry-to-the-touch and will not attract dirt or dust. Protect trim pieces with Chemical Guys Blue Guard to keep them looking great in all weather conditions.

## What's New?

**Improved Looks** - The new Blue Guard comes boosted with refined oils and UV blocking agents for darker, wetter, and glossier shine to exterior trim and tires. Blue Guard will take black trim pieces back to a factory fresh shine with the deepest wet black look imaginable.

**Improved Durability** - New waterproofing agents help lock in the essential oils and plastic conditioners, keeping them deep inside plastic and rubber trim for longer. Blue Guard always finishes dry-to-the-touch, and will never feel greasy or attract dust or dirt.

**Easier To Use** - Simply spray Blue Guard on the surface. ...That's it! Give the essential oils and UV blockers time to penetrate into the plastic or rubber trim, then wipe away any excess. For neater results, spray Blue Guard into the foam or microfiber applicator pad, then rub directly onto the surface to avoid overspray on paint or other areas.

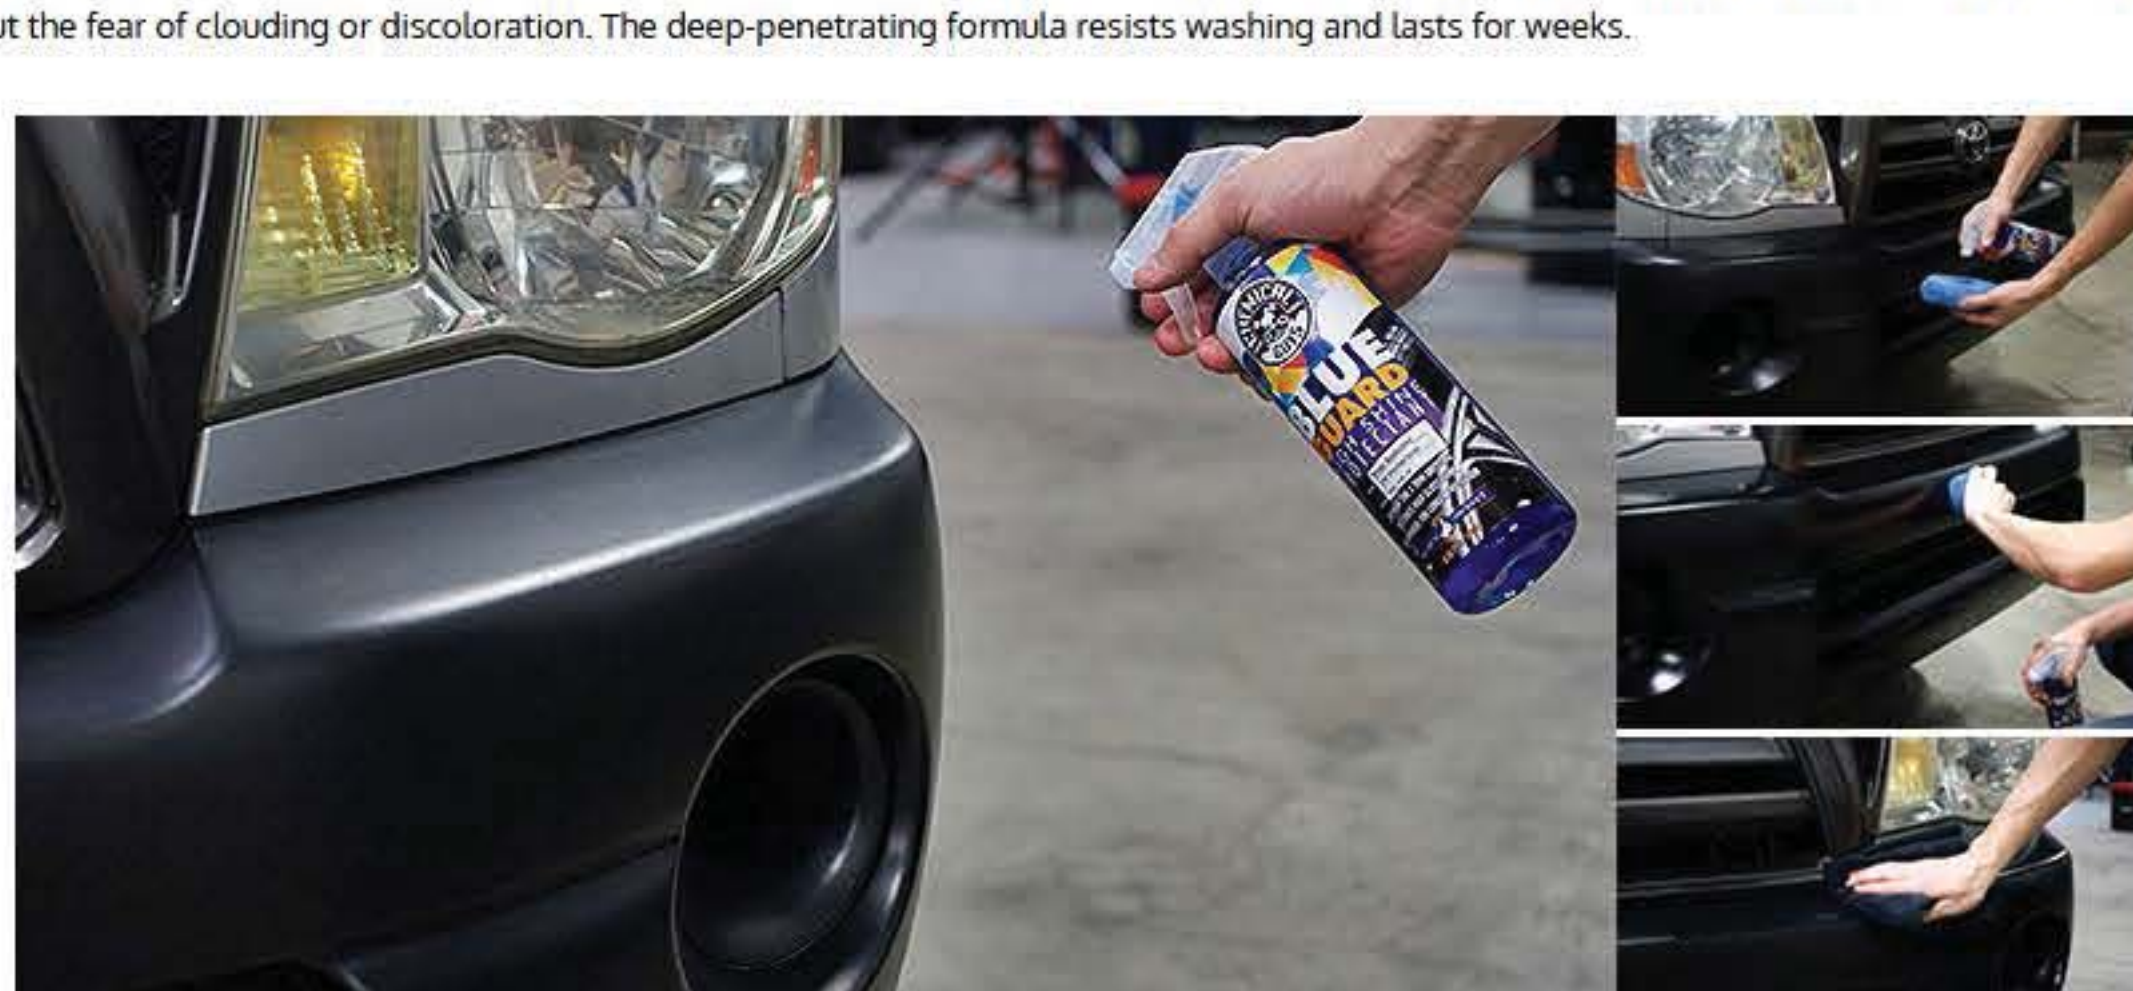

## How It Works

Chemical Guys Blue Guard is a premium trim dressing and conditioner that produces a deep-dark high gloss shine. The versatile oil-infused formula penetrates deep to nourish and restore plastic and rubber trim with a darker, richer, wetter shine with long lasting durability. Blue Guard is also infused with improved UV blockers to shield vehicle trim against solar degradation, helping them last longer. Use Blue Guard for removing white, yellow, and brown residue to restore that crisp factory-fresh high gloss shine.

To use Blue Guard, apply it to a foam or microfiber applicator, work into the surface, and let dry for 5 minutes. Buff off excess with a microfiber towel. Neglected areas may need multiple treatments, so apply as often as desired. Blue Guard is waterproof and will last through multiple washes for long term deep-black plastic shine.

Blue Guard conditions, protects, and finishes 100% dry-to-the-touch. Never greasy or oily. The rejuvenating formula enhances the natural shine and texture of plastic, rubber, and tires. Use it on rubber and plastic bumpers, emblems, weatherstripping, fender flares, louvers, side-mirrors, window trim, tires, and more. Apply as often as desired without the fear of clouding or discoloration. The deep-penetrating formula resists washing and lasts for weeks.

## How It Looks

Car manufacturers often use flat black trim to accentuate body lines and protect sensitive areas from impact damage. Plastic material is very strong and rugged, but the porous surface is easily stained by fluids and chemicals. This plastic is constantly exposed to harsh UV sunlight, which causes it to oxidize, feel brittle, and turn white and brown. Car waxes and sealants are good for paint, but stain plastic and rubber. Only special dressings like Blue Guard are formulated to penetrate deeply to restore the high gloss shine and protect plastic and rubber pieces. Use Blue Guard to restore trim to factory-fresh high gloss shine!

## UV Protection

Blue Guard is infused with patented UV blockers to shield plastic and rubber parts against the harmful solar rays that cause cracking, fading and discoloration. Paint has sealant and wax, so plastics and rubber get Blue Guard dressing: it's like sunscreen for exterior plastic and rubber trim. The UV protection in Blue Guard protects surfaces from fading, dulling, and cracking getting a high gloss shine. Dressings like Blue Guard help restore back to sun-bleached car parts, but the added UV protection can actually help prevent that damage from occurring in the first place. Restore, protect, and enhance exterior rubber and plastic trim against the effects of the sun with Chemical Guys Blue Guard dressing.

## Other Sizes Available

Blue Guard II Wet Look Premium Dressing is available in [4 ounce](#), [16 ounce](#), and [1 gallon](#) sizes.

How To Use:

- Spray Blue Guard onto a foam or microfiber applicator.
- Work into surface evenly, neglected areas may require additional coats
- Let dry for 5 minutes, wipe off excess with microfiber towel.
- Use as often as desired.
- Formulated for exterior plastic and rubber, do not use on interior surfaces.
