

The 2005-09 Mustang GT is most distinguishable from the Mustang V6 model because of its more intimidating front fascia. Although the factory front end does an excellent job of grabbing the attention of its onlookers, the lower fascia does a better job of flowing into the rest of the car rather than making itself pronounced as the classic Mustangs of the past have done. Give your late model Mustang a heritage touch while enhancing the appearance of the front fascia with the Mustang GT Classic Chin Spoiler.

- To ensure OEM quality, fit and finish, CDC uses the same injection molded TPO material Ford uses for the front and rear fascias.

- Similar to the appearance of the stock black mirror housings, the chin is molded in textured black and is designed to be installed right out of the box. The light texture can also be smoothed and painted to match the color of the vehicle.

- The chin installs easily using all factory mounting locations with supplied hardware and 3M Acrylic Bonding Tape.

* Don't be fooled by imitations, give your vehicle the quality it deserves, ask for Classic Design Concepts products by name! *

NEW CHIN SPLITTER OPTION!!!
