

The S197 Mustang became a very popular design upon its release in 2005 because in comparison to the previous models, it featured more aggressive and muscular styling cues. In contrast to the Mustang GT's aggressive front fascia, the V6 model is lacking a few of those hard body lines that make the front end so intimidating.

Give your V6 Mustang's fascia the intimidation factor you've always wanted with CDC's V6 Chin Spoiler. This component perfectly compliments the stock lines of the vehicle with an OE quality fit and finish that will be sure to give your Mustang's front end a strong appearance.

Don't be disappointed, ask for Quality CDC parts by name.

- The *V6 Chin Spoiler* is manufactured using OE quality TPO material.
- Molded in Textured Black
- Simply installs by drilling (10) 1/4" holes and using the supplied push pin fasteners.

When it comes to quality body kits & ground effects, Classic Design Concepts is the brand you can depend on.
