

PRODUCT FEATURES:

- Replaces factory license plate light.
- Maintains the OEM look.
- With parking guide lines (can be turned on or off)

NOTE:

- Replace the license plate light closest to the middle of the van for a better viewing angle.

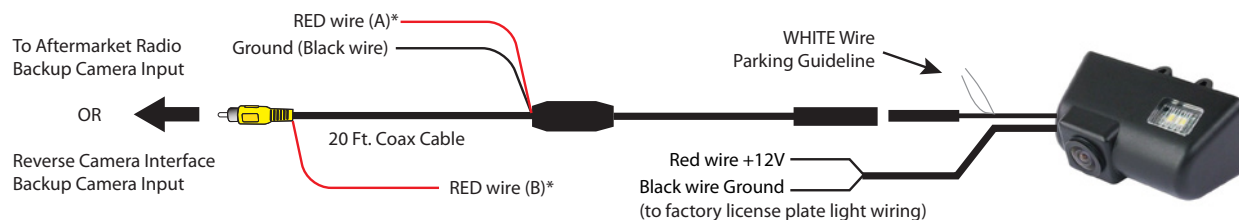

PARTS INCLUDED:

1. License plate light camera
2. 20" extension cable

INSTALLATION INSTRUCTIONS:

1. Carefully remove the factory license plate light. You may need to push on the locking tabs from inside the rear door.
2. Mount the CFD-04T with the LED light facing down.
3. Run the cable to the inside of the cabin towards the radio.
4. Connect the power and ground wires of the LED to the factory license plate light wires.
4. Make the power and video connections to the RVC interface (i.e. Crux part# RVCFD-79A, sold separately) or the aftermarket radio.

***NOTE:** To power the camera, use RED Wire A or B. If tapping power from the radio or RVC Interface, make sure to insulate RED Wire A to avoid it from shorting. If you will be tapping power from the reverse light +12V, insulate RED Wire B to avoid it from shorting. With either connection the Black GROUND wire needs to be connected to a solid chassis ground. For vehicles with manual transmission, we recommend tapping +12V power from the reverse light.

WHITE Wire: Connect to show parking guide line. Disconnect to remove. Insulate with tape to avoid from shorting.

Note: Cycle the camera power after connecting or disconnecting the control wire.

VEHICLE APPLICATIONS:

2010 - 2016 Ford Transit Connect
