- 1) Remove spare tire and heat shield. The heat shield under the bed floor needs to be removed or a section cut out for the hitch assembly to be installed. If cut, trim the heat shield from in front of the bed support over the axle to the back of the bed support near the front of the wheel well.

****NOTE: Before installing crossarms, run a 1/2"-13 bolt or 1/2"-13 tap through crossarm holes to remove any powder or debris.****

- 2) Install the rear crossarm by sliding it between the frame and truck bed floor above the passenger side rear tire. After spanning the frames, rotate the cross arm vertically with the holes towards the bottom. **On 1 ton applications**, slide the crossarm through toward the front of the third truck bed rail.

FIGURE B

- 3) Install the front crossarm by sliding it between the truck frame and truck bed above the passenger side rear tire. With the crossarm spanning the truck frame, rotate it vertically with the holes towards the bottom. Notch the bed flange as required if needed.
- 4) Install the center section by carefully raising it above the fuel tank from beneath the truck. **OPTIONAL:** Two pushnut bolt retainers (11) are included to give a "helping hand" to the installation process. If desired, put two 1/2" x 1 1/2" carriage bolts (3) in through the centermost slots on the front side of the center section. Be sure the serrations in the bolt retainers are angled away from the center section and push a bolt retainer onto the two carriage bolts. Use one of the included spacers as a tool to push the bolt retainers into position, see **FIGURE C**. Install the fasteners as shown above in **Figure B**, noting that the hole above the driver side front hole over the fuel tank uses a carriage bolt, spacer and nut. A 1/2" fishwire has been included to aid in the placement of the carriage bolt and spacer. Thread them only finger tight into the crossarms.
- 5) Install the sideplates, aligning the large holes with the existing slot in the frame. **For '07 and up 2500 & 3500 new body styles:** Remove the electrical box on the inside of the driver side frame and attach it using the supplied electrical box bracket. Attach the bracket to the frame with the 3/4" bolt used to attach the sideplate, using the obround spacers provided to fill the slot in the frame.
- 6) Attach the sideplate flanges to the cross arms using a 1/2" x 1 1/2" hex bolt with 1/2" conical tooth washer and 5/8" x 1 3/4" carriage bolt, CM-SP9, and 5/8" flange nut. Thread them through the inside of the sideplate flanges into the crossarms. **(Finger tight only!)**

- 7) Attach the sideplates to the frame of the truck using a U-bolt and 3/4" hex bolt. **For 3/4 and 1 ton applications**, use the large U-bolt in order to span the truck frame. The smaller U-bolt is used for **1/2 ton and 3/4 ton light duty trucks**. Position the U-bolt from the inside of the truck frame, make sure not to damage or pinch the wiring harness or brake lines. Attach to the sideplate using two 1/2" flange nuts. **(Finger tight only)** Attach the rear section of the sideplate to the frame using a 3/4" hex bolt and 3/4" washer through the sideplate and frame. Finger tighten a 3/4" flange nut to the bolt on the inside of the frame. **For 3/4 and 1 ton heavy duty trucks**, use the bottom hole on the sideplate. **For 1/2 ton and 3/4 ton light duty trucks**, use the top hole on the sideplate. These are called out on **Figure A**.
- 8) Torque all 1/2" fasteners to 110 lb-ft, 5/8" fasteners to 210 lb-ft, and all 3/4" fasteners to 380 lb-ft in the following order:
- First:** Torque the center section to the front and rear crossarms.
- Second:** Torque the sideplates to the truck frame on both sides. **(When torquing the U-bolts, make sure to tighten them slowly alternating between the top and bottom of the U-bolt until equally tightened to a maximum of 40 ft-lbs.)**
- Third:** Torque the sideplate flanges to the front and rear crossarms.
- 9) If desired, trim the sideplate u-bolts to provide additional handle rod clearance upon installation completion.

****WARNING REFERENCE CLEARANCE CALCULATOR BEFORE TOWING****

CLEARANCE CALCULATION

$$\begin{matrix} \text{(CAB TO BALL CENTER)} & - & 1/2 \text{ (TRAILER WIDTH)} & = & \text{(MINIMUM CLEARANCE)} \\ \text{(X)} & & \text{(Y)} & & \text{(Z)} \end{matrix}$$

IF THERE IS AN OVERHANG FROM THE COUPLER THEN THE EQUATION IS:

$$\begin{matrix} \text{[(X) - (W)]} & - & \text{(Y)} & = & \text{(Z)} \end{matrix}$$

*****IF (Z) IS POSITIVE, TRAILER WILL NOT INTERFERE WITH CAB OF TRUCK.***
IF (Z) IS NEGATIVE, TRAILER WILL INTERFERE WITH CAB OF TRUCK!!!**

EXAMPLE:

STANDARD TRAILER

$$X - Y = Z$$

$$35 - 36 = -1$$

(TRAILER **WILL INTERFERE** WITH CAB)

TRAILER WITH OVERHANG

$$\text{[(X) - (W)]} - Y = Z$$

$$[35 - 4] - 36 = -5$$

(TRAILER **WILL INTERFERE** WITH CAB)

YOUR CALCULATION:

(CAB TO BALL CENTER) _____

(COUPLER OVERHANG) _____

1/2 (TRAILER WIDTH) _____

(MINIMUM CLEARANCE) _____
