INSTALLATION WALKTHROUGH:

Parts List					
ITEM	QTY	PART NUMBER	DESCRIPTION		
1	6	7_16 - 14 x 1 1_4 CARRIAGE (GRADE 8)	CARRIAGE BOLT		
2	6	7_16 FISHWIRE	7/16" FISHWIRE		
3	6	CM-SP2	.250 x .88 x 2.25" SQUARE HOLE SPACER		
4	6	7/16-14	HEX FLANGE NUT		
5	4	M12-1.25 x 30mm	HEX BOLT		
6	4	1/2 CONICAL TOOTHED WASHER	WASHER,CONICAL,TOOTHED,1/2"		
7	4	M12-1.75 x 30mm	HEX BOLT		

 Lower rear exhaust hangers from one location on each side of the vehicle. For ease of installation, the exhaust can also be lowered in one location at the front center of the vehicle. This location will need to be lowered slowly and supported from underneath during install. Caulking may need to be trimmed around side mounting holes if present.

2) On some model years the wheel well plastic on each side of the vehicle near the frame rails will need to be trimmed to provide a flush fit for the hitch side plates. Be sure to avoid the vehicle brake lines when cutting the plastic away.

INSTALLATION WALKTHROUGH:

3) Enlarge the access holes in the vehicle frame in order to fit the SP2 spacers provided in the hardware kit. Be sure to avoid the vehicle brake lines when cutting the frame material away.

4) Fishwire spacers and 7/16" bolts through access holes and into the bottom mounting holes in the vehicle frame. Raise hitch into position and loosely secure in place with the 7/16" nuts provided.

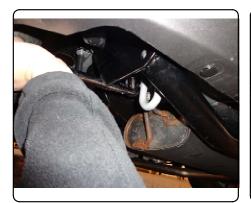

5a) If no weldnuts exist in frame, fishwire the hardware for the vertical mounting points through the framerail and the hitch side plates. Secure all 7/16" hardware.b) If weldnuts exist in frame, then secure hitch with M12 bolts and 1/2" conical washers in the side mounting plates

6) Torque all 7/16" hardware to 70 lb-ft. Torque all M12 hardware to 86 lb-ft. Raise exhaust hangers back into position.

TOWING SAFETY INFORMATION

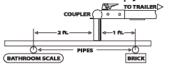

Gross Trailer Weight / GTW

The Gross Trailer Weight is the weight of the trailer & cargo. Measure this by putting the fully loaded trailer on a vehicle scale.

Tongue Weight / TW

The downward force that is exerted on the hitch ball by the coupler. The tongue weight will vary depending on where the load is positioned in relationship to the trailer axle(s). To measure the tongue weight, use either a commercial scale or a bathroom scale with the coupler at towing height. When using a bathroom scale with heavier tongue weights, use the method shown and multiply the scale reading by 3.

Weight Carrying / WC

The total weight of both the trailer and the cargo inside. Never exceed the weight capacity of your trailer hitch.

Weight Distribution / WD

Used to balance the weight of the cargo between the front and rear wheels throughout the trailer, allowing for better steering, braking, and level riding.

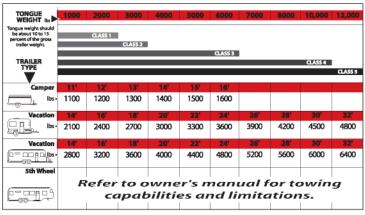

Sway Control

A device used to reduce the lateral movements of the trailer that are caused by the wind. This works in conjunction with a weight distribution hitch. Do not use this on a class 1 or 2 hitch, or with surge brakes.

How Much Can You Safely Tow?

Ball Mount

The ball mount is placed inside the opening of the receiver hitch which is mounted to the vehicle. Make sure a hitch pin and clip is properly securing the ball mount to the receiver hitch before you begin towing.

A: Rise. B: Drop. C: Hole Size. D: Length.

Trailer Ball

The connection from the hitch to the trailer. There are many factors that determine the correct hitch ball:

- Number one is the hitch ball's gross trailer weightrating.
- The mounting platform must be at least 3/8" thick.
- The hole diameter must not be more than 1/16" larger than the threaded shank.
- · Every time you tow, check the nut and lock washer to make sure they are fastened securely.

 • A: Ball Dia. B: Shank Dia. C: Shank Length. D: Shank Rise.

Coupler

The component that is placed over the trailer ball to connect the vehicle to the trailer. Be sure that the coupler size matches the size of the hitch ball and that the coupler handle is securely fastened. To determine what size hitch ball you need for your application you will need to know the size of coupler that is on the trailer. Be sure your coupler is properly adjusted to the ball you are using.

NOTE: For added security the use of safety devices such as Coupler Safety Pins and Locks is strongly recommended.

Safety Chains

Safety chains are a requirement and should be crossed under the tongue of the trailer so that the tongue will not drop to the road if it becomes separated from the hitch. Always leave enough slack so you can turn. Never allow the safety chains to drag on the ground and never attach the chains to the bumper.

Trailer Classification: Safety Chain Breaking Force - Minimum

Class 1: 2,000 lbs. (8.9 kN) Class 2: 3,500 lbs. (15.6 kN) Class 3: 5,000 lbs. (22.2 kN)

The strength rating of each length of safety chain or its equivalent and its attachments shall be equal to or exceed in minimum breaking force the GVWR (Gross Vehicle Weight Rating) of the trailer.

Electrical

Trailer lights, Electric Brakes, Break-away systems - Every time you tow, be sure to check that all components are working properly.

Wiring identification by color:

BUICK ENCORE/CHEVROLET TRAX

GROSS LOAD CAPACITY WHEN USED AS A WEIGHT CARRYING HITCH: 2,000 LBS. TRAILER WEIGHT & 200 LBS. TONGUE WEIGHT.

WARNING: ALL NON-TRAILER (WHEEL-LESS) LOADS APPLIED TO THIS PRODUCT MUST BE SUPPORTED BY 18050 STABILIZING STRAPS.

WARNING: ** FAILURE TO PROPERLY SUPPORT NON-TRAILER LOADS WILL VOID PRODUCT WARRANTY **

WARNING: *** DO NOT EXCEED VEHICLE MANUFACTURER'S RECOMMENDED TOWING CAPACITY **

RUBBER ISOLATOR REMOVAL DIAGRAM This technique can be used if an Exhaust Hanger Removal Pilers is not available. Using a 5/8" open end wrench, slide the wrench up to the rubber isolator, cradling the hanger rod as shown. Next place the flat edge of a pry bar between the wrench and the hanger stop or hanger rod. Then simply rotate the pry bar toward the wrench to remove the rubber isolator. Note: Using a spray lubricant or soapy water on the hanger rod and the rubber isolator helps removal.
