

# **13171 INSTALLATION INSTRUCTIONS**

Safety glasses should be worn at all times while installing this product.

YEARS: 2014-PRESENT

**MAKE: JEEP** 

**MODEL: CHEROKEE** 

STYLE: ALL (INCLUDES TRAILHAWK

WARNING: NEVER EXCEED YOUR VEHICLE MANUFACTURER'S RECOMMENDED TOWING CAPACITY

**WEIGHT CARRYING:** 

TRAILER WEIGHT: 5000 LBS. **TONGUE WEIGHT:** 750 LBS.

**WEIGHT DISTRIBUTION:** 

TRAILER WEIGHT: 6000 LBS.

**TONGUE WEIGHT:** 750 LBS.

PRO INSTALL TIME: **30 MIN. NOVICE INSTALL TIME:** 60 MIN.

IF YOU ARE HESITANT TO UNDERTAKE THIS TASK ON YOUR OWN, CONTACT AN AUTHORIZED CURT INSTALLER FOR ADDITIONAL ASSISTANCE.

### **INSTALLATION TIPS:**

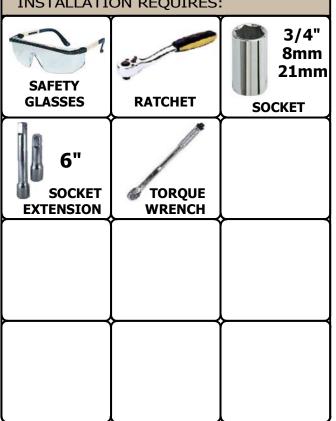

- 1. BEFORE YOU BEGIN INSTALLATION, READ ALL INSTRUCTIONS THOROUGHLY.
- 2. TO EASE INSTALLATION, 2 PEOPLE MAY BE REQUIRED.
- 3. USING PROPER TOOLS WILL GREATLY IMPROVE THE OUALITY OF THE INSTALL AND REDUCE THE TIME REQUIRED.

# **VEHICLE PHOTO:**

REPRESENTATIVE PHOTO

# **INSTALLATION REQUIRES:**

#### LEVEL OF DIFFICULTY: **EASY**

**EASY** MODERATE CHALLENGING

NO DRILLING REQUIRED

FISHWIRE HARDWARE

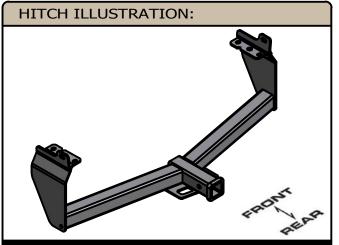

REVERSE FISHWIRE **HARDWARE** 

TRAILHAWK MODELS: **CLEAN WELDNUTS** IF NEEDED

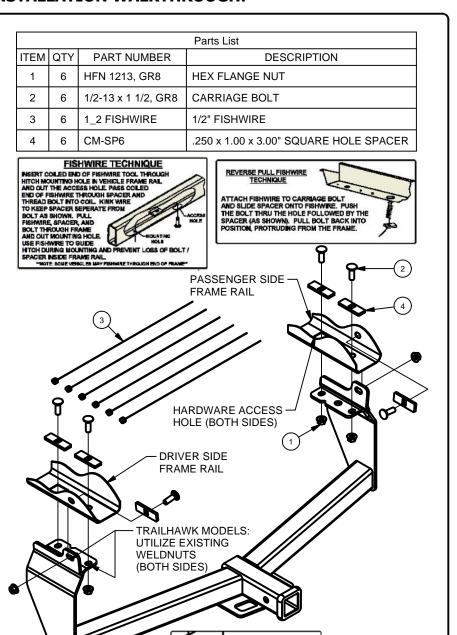

TRAILHAWK MODELS: **TEMPORARILY REMOVE** PLASTIC FASCIA

MAKE SURE YOUR HITCH MATCHES

#### **INSTALLATION WALKTHROUGH:**

To remove debris from weldnuts in frame, spray lubricant or compressed air into hole. For heavy debris, use a small wire brush. (Be careful not to damage threads 1. Trailhawk models: Temporary plastic fascia removal is required for install. Remove (4) screws with a 10mm socket from the bottom of the panel, and push on tabs to unclip. Set aside for reassembly.

2. Examine vehicle frame rails - If wire is present on either side frame rail, unfasten by pulling retainer out of the frame and temporary let hang loose below frame rail.

Remove square rubber plug on each side of the frame rail to expose hardware access holes. Return plugs to owner.

#### **INSTALLATION WALKTHROUGH:**

3. Fishwire rear and side mounting hole hardware through the access hole in the vehicle frame. Reverse fishwire remaining hardware through the access hole (both sides). Trailhawk models: Only use "reverse fishwire hardware" and the vehicle M14 bolts previously removed.

4. Raise hitch up from in front of the exhaust and into position, using care not to push hardware back inside frame. Be sure to loosely secure hitch with the mounting hardware to align all holes before tightening.

Note: Seam foam may need to be trimmed for proper mounting plate fit.

5. As needed, resecure wire to vehicle frame rail.

Torque all 1/2" hardware to 110 lb-ft. Trailhawk: Torque all M14 hardware to 139 lb-ft.

6. Trailhawk models: Clip plastic fascia panels into place and secure with (4) screws.

Installation Complete

#### TOWING SAFETY INFORMATION

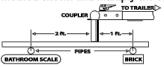

#### Gross Trailer Weight / GTW

The Gross Trailer Weight is the weight of the trailer & cargo. Measure this by putting the fully loaded trailer on a vehicle scale.

# Tongue Weight / TW

The downward force that is exerted on the hitch ball by the coupler. The tongue weight will vary depending on where the load is positioned in relationship to the trailer axle(s). To measure the tongue weight, use either a commercial scale or a bathroom scale with the coupler at towing height. When using a bathroom scale with heavier tongue weights, use the method shown and multiply the scale reading by 3.

#### Weight Carrying / WC

The total weight of both the trailer and the cargo inside. Never exceed the weight capacity of your trailer hitch.

#### Weight Distribution / WD

Used to balance the weight of the cargo between the front and rear wheels throughout the trailer, allowing for better steering, braking, and level riding.

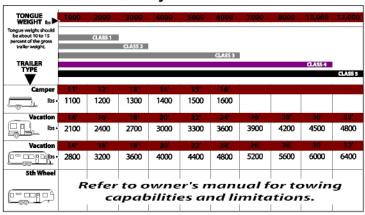

#### Sway Control

A device used to reduce the lateral movements of the trailer that are caused by the wind. This works in conjunction with a weight distribution hitch. Do not use this on a class 1 or 2 hitch, or with surge brakes.

# How Much Can You Safely Tow?

#### Ball Mount

The ball mount is placed inside the opening of the receiver hitch which is mounted to the vehicle. Make sure a hitch pin and clip is properly securing the ball mount to the receiver hitch before you begin towing.

A: Rise. B: Drop. C: Hole Size. D: Length.

#### Trailer Ball

The connection from the hitch to the trailer. There are many factors that determine the correct hitch ball:

- Number one is the hitch ball's gross trailer weight rating.
- The mounting platform must be at least 3/8" thick.
- The hole diameter must not be more than 1/16" larger than the threaded shank.
- · Every time you tow, check the nut and lock washer to make sure they are fastened securely.

  • A: Ball Dia. B: Shank Length. C: Shank Dia. D: Shank Rise.

#### Coupler

The component that is placed over the trailer ball to connect the vehicle to the trailer. Be sure that the coupler size matches the size of the hitch ball and that the coupler handle is securely fastened. To determine what size hitch ball you need for your application you will need to know the size of coupler that is on the trailer. Be sure your coupler is properly adjusted to the ball you are using.

NOTE: For added security the use of safety devices such as Coupler Safety Pins and Locks is strongly recommended.

#### Safety Chains

Safety chains are a requirement and should be crossed under the tongue of the trailer so that the tongue will not drop to the road if it becomes separated from the hitch. Always leave enough slack so you can turn. Never allow the safety chains to drag on the ground and never attach the chains to the bumper.

Trailer Classification: Safety Chain Breaking Force - Minimum

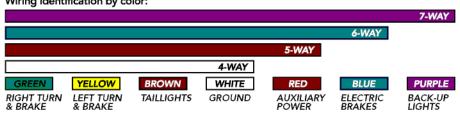

Class 1: 2,000 lbs. (8.9 kN) Class 2: 3,500 lbs. (15.6 kN) Class 3: 5,000 lbs. (22.2 kN)

The strength rating of each length of safety chain or its equivalent and its attachments shall be equal to or exceed in minimum breaking force the GVWR (Gross Vehicle Weight Rating) of the trailer.

#### Electrical

Trailer lights, Electric Brakes, Break-away systems - Every time you tow, be sure to check that all components are working properly.

Wiring identification by color:

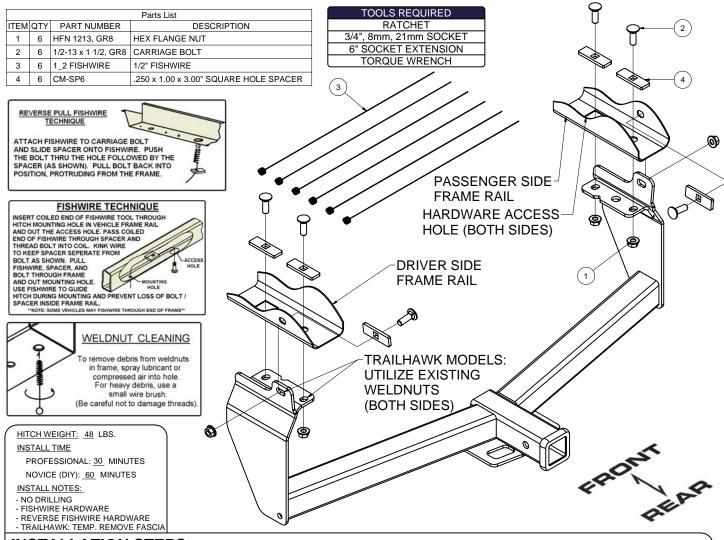

CURT DISCLAIMER: WIRING COLOR SHOWN WORK IN CONJUNCTION WITH CURT MANUFACTURING PRODUCTS.

# 13171 JEEP CHEROKEE (ALL MODELS INCLUDING TRAILHAWK)

GROSS LOAD CAPACITY WHEN USED AS A WEIGHT CARRYING HITCH: 5,000 LBS. TRAILER WEIGHT & 750 LBS. TONGUE WEIGHT. GROSS LOAD CAPACITY WHEN USED AS A WEIGHT DISTRIBUTION HITCH: 6,000 LBS. TRAILER WEIGHT & 750 LBS. TONGUE WEIGHT

\*\*\*DO NOT EXCEED VEHICLE MANUFACTURER'S RECOMMENDED TOWING CAPACITY.\*\*\*

## **INSTALLATION STEPS**

- 1. Trailhawk models: Temporary plastic fascia removal is required for install. Remove (4) screws with a 10mm socket from the bottom of the panel, and puch on tabs to unclip. Set aside for reassembly.
- 2. Examine vehicle frame rails If wire is present on either side frame rail, unfasten by pulling retainer out of the frame and temporarily let hang loose below frame rail.
  - Remove square rubber plug on each side of the frame rails to expose access holes. Return plugs to owner.
- 3. Fishwire rear and side mounting hole hardware throught the access hole in the vehicle frame. Reverse fishwire remaining hardware through the access hole (both sides). Trailhawk models: Only use "reverse fishwire hardware" and the vehicle M14 bolts previously removed.
- 4. Raise hitch up from in front of the exhaust and into position, using care not to push hardware back inside frame. Be sure to loosely secure hitch with the mounting hardware to align all holes before tightening. Note: Seam foam may need to be trimmed for proper mounting plate fit.
- 5. As needed, resecure wire to vehicle frame rail.
  - Torque all 1/2" hardware to 110 lb-ft. Trailhawk models: Torque all M14 hardware to 139 lb-ft.
- 6. Trailhawk models: Clip plastic fascia panel into place and secure with (4) screws.

PERIODICALLY CHECK THIS RECEIVER HITCH TO ENSURE THAT ALL FASTENERS ARE TIGHT AND THAT ALL STRUCTURAL COMPONENTS ARE SOUND.
