DRIVER SIDE UNDER BODY PANEL TRIM DIAGRAM

DRIVE SIDE TRIM NOTES:

- LONG THIN CUT IS 7.50" FROM EDGE OF LARGE HOLE AND 2.50".
- TRIM CORNER OF PANEL ALONG SEAMS IN THE PANEL AS SHOWN.

PASSENGER SIDE UNDER BODY PANEL TRIM DIAGRAM

PASSENGER SIDE TRIM NOTES:

- ALIGN HORIZONTAL CUT WITH TOP OF RIB.

INSTALLATION STEPS

- Using the flat head screw driver, remove all push fasteners in underbody panels. Use a phillips head screw driver to remove remaining screws. Use the 14mm socket and ratchet to remove the bolt holding the passenger side panel. Return underbody panels to owner or trim and reinstall in STEP 6.
- 2. Using the 14mm socket, remove both tow loops and return to owner. Remove (3) rubber plugs from passenger side and (1) from driver side.
- 3. Carefully raise hitch over exhaust towards muffler and pull back to bumper over the plastic flange on the bumper. Position the hitch so the holes line up with existing holes in the frame rail.
- 4. Install supplied 10M -1.25 x 30 hex head bolts and 3/8" conical tooth washers as shown above.
- 5. Using a torque wrench, torque all 10M 1.25 bolts to 37 lb-ft.
- 6. Trim underbody panels and reinstall with the hardware removed in STEP 1. (See trim diagrams above.)
