

Application Instructions

Clean application area.

- For vehicles, we recommend cleaning the surface with soap and water rather than window cleaning products. Ensure the window is completely dry before application. Do not apply in extreme heat or cold, ideal temperature should be between 50F and 85F.
- For electronic devices, clean the surface with a damp lint-free cloth using isopropyl alcohol.

Peel and stick!

- With clean hands, carefully peel the decal up from the paper backing. Hover the decal over the application area and lightly press the decal to the surface. Slowly apply pressure to the decal from the center to the edges.
