

MIRROR GLASS ASSEMBLY INSTALLATION INSTRUCTIONS

Mirror Glass Assembly replacement is possible without removing the mirror housing from the vehicle.

REQUIRED TOOLS

- Masking Tape
- Small Slotted Screwdriver or Small Pry Tool
- Sturdy Gloves
- Safety Glasses

CAUTION: Always wear Safety Glasses and Sturdy Gloves when working with any mirror glass.

NOTE: It is important to review your Plastic-Backed Mirror Glass Assembly prior to beginning any installation ~ Specific tab or mount locations can vary by product.

Fig. 1. Removing the broken mirror glass assembly from the current housing.

- A. Apply masking tape across old glass surface to protect from breaking glass during removal process.
- B. Push on the top edge of the old mirror to manually pivot the bottom fully outward.
- C. Insert a small pry bar or flat screwdriver in between the mirror mount and the back plate.
- D. Carefully pry until the top of the old mirror is dislodged from the mirror housing.
- E. If applicable, disconnect all wire connections behind old mirror and remove it from mirror housing.

Fig. 2. Reconnecting the mirror glass assembly.
A. If vehicle has a heated mirror, connect the wires to the heater terminals.

Fig. 3 A-B. Installing your new mirror glass assembly.

- A. Tuck all wiring harnesses behind motor actuator.
- B. Place and align the mirror motor mount tabs in the upper slots of the motor mount. (Image A)
- C. While wearing a glove and with upper tabs aligned, close up the mirror glass assembly and press firmly until you hear the lower snaps engage onto the motor mount. (Image B)

Note: Mirror should be pivoted through its full range of travel to ensure it is properly seated on the motor mount.

CAUTION:

- The pressure should be applied in the location of the motor behind the glass
- Do not press using your fingers as this will cause mirror distortion
- All pressure should be uniformly distributed over the glass and away from the mirror perimeter to avoid damaging/breaking the new mirror
