## DIFFERENCES BETWEEN IDLAS AND DLAS

### *Integrated Door Lock Actuators (IDLA)*

IDLAs contain complex electronics that integrate a complete door latch assembly, including the lock and unlock mechanism, into the actuator.

### *Door Lock Actuators (DLA)*

DLAs are mechanical components connected by a series of rods and cables to the door lock mechanism to lock or unlock the vehicle door.

## HOW THEY WORK

Door lock actuators (DLAs) and integrated door lock actuators (IDLAs) are linked to your vehicle's electronic control module (ECM) or body control module (BCM).

The control module monitors all possible sources of "unlock" or "lock" signals that come from radio transmitters, such as a key fob or door entry keypads, and provides power on a timed interval to the actuator to lock or unlock the door.

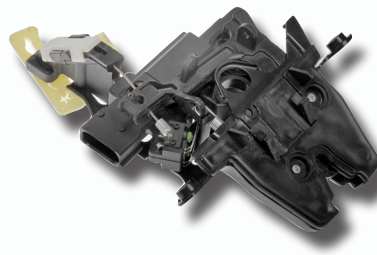

## COMMON FAILURE MODES

Electrical motor burn out or excessive wear to internal mechanical components.
