Important notes

- 1.** This catalogue replaces all previous issues.
- 2.** The catalogue is protected by copyright.
The duplication of it or any part of it is prohibited.
- 3.** The supply of dph components strictly adhere to our sales and delivery agreement and are subject to our conditions of payment.
- 4.** We reserve the right to modify our components as necessary.
- 5.** The original equipment part numbers, as well as SLP, Elring-No., etc. indicated in the catalogue only serve as a cross-reference comparison with dph numbers. They must not appear on any advice notes or invoices.
- 6.** All original part numbers of engine or vehicle manufacturers in this catalogue are mentioned for comparison reasons only and should not be used in contacts with vehicle owners.
- 7.** Every effort has been made to ensure that the information in this catalogue is correct at the time of printing, but dph cannot accept any responsibility for errors which may occur.

Qualität – made by dph Germany

High quality guarantees growing success

We have always supplied our customers with high quality seals for the following sectors: Automobile, hydraulic seals, mountings and other fields all at reasonable prices and quick delivery. We can count many well-known companies throughout the world as satisfied customers.

Four strategies guarantee our success:

- First rate products with top class quality assured
- Short delivery times due to our own stock levels
- Flexibility in the procurement of all parts
- Attractive pricing policy

Fully automated electronic quality checks and manufacturing to DIN standards guarantee continuous high quality products. To your advantage and always at very fair prices.

Perfect manufacturing and continuous quality assurance

Together we are strong – this is the maxim in our group. High quality is not achieved just as a result of monitoring but of production technique. Therefore, Dichtungspartner Hamburg receives the bulk of its products from OEM suppliers and from suppliers whose quality management is certified in accordance with DIN/ISO 9000/9001.

Despite this, we still think it is necessary to check the finished products thoroughly once more within our group according to DIN/ISO 9001. Our high-grade measuring instruments are checking the radial force of oil seals, the tensile strength of elastomers, the compression set and the surface quality by means of computer-based cameras and many more. The results of the checks are registered and filed. It is good to have confidence but qualification is better!

Contents

	OEM numbers, reference list	6 – 12
	Engine gaskets and gasket sets	13 – 31
	Cylinder head gaskets & sets, cylinder liner sealing rings & kits, cylinder liner sealing ring, complete gasket sets, valve cover gaskets, oil pan gaskets & kits, manifold gaskets, full sets, oil seals for engine	
	Engine parts, fuel, exhaust and cooling system parts	32 – 62
	Oil seals, washers, o-rings, gaskets, oil seals crankshaft	
	Clutch, gearbox	63 – 65
	Servo cylinders, o-rings, transmission oil seals	
	Brake parts	66
	Diaphragms	
	Front and rear axle parts, steering	67 – 70
	Servo cylinders, o-rings, transmission oil seals	
	Overview of most popular oil seal types	71
	Standard terms and conditions	72 – 73

Manifold gasket – EXHAUST

dph-no. OEM-no. application

97113 51 08901 0027

D0224 MF, 66kW, 4 cyl. 102 dia. from 1980,
4 pcs required

D0226 M/MF/MFA
100kW, 6 cyl. dia. 102 from 1980

D0824

4 cyl. dia. 108, 4 pcs required

D0824 GF 75kW, 4 cyl. 108 dia from 1987
4 pcs required

D0826 6 cyl. dia. 108 6 pcs required

D0826 6 cyl. dia. 108 with crank-case cover
6 pcs required

D0836 LFL01 6 cyl. dia. 108, 6 pcs required

61060 51 08901 0023

D2530 ME, oil filter reversible
exhaust not-cooled
10 cyl. dia. 125, 10 pcs required

D2530 ME with re-inforced bushing,
exhaust not-cooled 10 cyl. dia. 125
10 pcs required

D2540 MTF/MTH up to engine 4584607063
10 cyl. dia. 125
10 pcs required

D2542 E with re-inforced bushing,
from engine 4702001, 12 cyl. dia. 125
12 pcs required

D2530 MF/MXH/MXF/MXFR
235 kW, 10 cyl. dia. 125 from 1971
10 pcs required

D2530 MTE with re-inforced bushing, exhaust not-cooled
engine 4304585019
engine 4304590012
engine 4304614046
10 cyl. dia. 125

D2530 MTE with re-inforced bushing, exhaust
water-cooled
engine 4304585019
engine 4304590012
engine 4304614046
from engine 4304759011
10 cyl. dia. 125

D2530 ME with re-inforced bushing, exhaust
water-cooled 10 cyl. dia. 125

D2538 M/MF 189kW, 8 cyl. dia. 125
from 1972, 8 pcs required

D2538 ME with re-inforced bushing,
from engine 465507, 8 cyl. Dia 125

D2538 ME/MTE oil filter reversible
exhaust not-cooled, 8 cyl. dia. 125

D2538 MT, 237kW, 8 cyl. dia. 125
From 1973

D2538 MTE with re-inforced bushing,
from engine 4655076, 8 cyl. dia. 125

D2540 MLE with re-inforced bushing, exhaust water-
cooled from engine 4534610068
10 cyl. dia. 125

D2540 MTE with re-inforced bushing,
engine 4514598038
engine 4514598039
engine 4514598040
from engine 4514615058
10 cyl. dia. 125

D2540 MTF/MTH with re-inforced bushing, from engine
4584607064, 10 cyl. dia. 125

D2530MXF/MXFR with re-inforced bushing, exhaust not-
cooled, 10 cyl 125 dia

D2566 MUH from engine 3294091103

D2566 MUM from engine 3394097095
6 cyl. dia. 125

D2542 MT/ME with re-inforced bushing,
12 cyl. dia. 125

D2542 ME oil filter reversible, exhaust not cooled,
12 cyl. dia. 125

D2542 ME with re-inforced bushing, exhaust not-cooled,
from engine 4704650001
12 cyl. dia. 125

D2542 MLE exhaust not-cooled, without air-compressor,
from engine 4904675003
12 cyl. dia. 125

D2542 MLE with re-inforced bushing, exhaust water-cooled
from engine 4904675003
12 cyl. dia. 125

D2542 MLE 12 cyl. dia. 125

D2542 MTE with re-inforced bushing, exhaust water-cooled,
from engine 48046540006 12 cyl. dia. 125

D2542 MTE oil filter not reversible, exhaust not cooled
12 dia 125

D2555 M/MF/MX/MXF
5 cyl. dia. 125

D2555 MXE without air-compressor exhaust not-cooled,
fuel filter not reversible
5 cyl. dia. 125

D2555 MXUH/MXUL

D2565 MXUH/MXUL

up to engine 4135000, 5 cyl. dia. 125
D2565 M/MF/MFR/MH/MHO/MR
5 cyl. dia. 125

D2565 ME without air-compressor
exhaust not-cooled 5 cyl. dia. 125

D2556 MXUH/MXUM up to engine 4091102

D2566 MUM from engine 4095094

D2566 UH/UH-200/UM
6cyl. dia. 125

D2566 M/MR/MF/MFR up to engine 4091059
D2566MFG up to engine 4092000
D2566 MFO/FMOR up to engine 4093057
D2566 MH/MHO up to engine 4092102
6 cyl. dia. 125

Standard terms and conditions

Standard Terms and Conditions of Trade and Delivery, as established by Dichtungspartner Hamburg GmbH, Ferdinand-Harten-Str. 15, 22949 Ammersbek, Germany, hereafter referred to as "dph":

Application

The terms and conditions set out below form part of all contracts for services, supplies and quotations by dph. Sales shall be made solely on the basis of the terms and conditions below. Ancillary agreements and amendments shall only be deemed valid if in writing.

If our contracting partner has its own terms and conditions which differ from dph's terms and conditions, we shall only be bound by the aforementioned terms and conditions of the contracting partner if we specifically accepted them in writing on conclusion of the contract. We hereby specifically state that we shall not accept a counter-confirmation by the customer with reference to its own terms and conditions.

Quotations

All quotations are subject to change. We shall not be bound by any arrangements made orally, by telegraph or telephone until we have issued a written confirmation. Any details given in brochures, advertisements, etc., including prices, shall not be binding until specifically agreed in writing.

Prices

Our prices are given in euros (EUR) ex works and exclude German VAT. Prices exclude postage/delivery, packing and insurance.

Delivery

1. Prices are given ex works. Unless free delivery has been agreed, the purchaser shall bear the costs associated with dispatch/shipment. It shall also bear costs ex delivery destination. Freight refunds are not granted. The goods shall be insured only if the customer so requests in writing, and insurance shall be at the customer's expense.
2. Collection and dispatch of the goods ex works or distribution warehouse is in all cases at the customer's risk.
3. We reserve the right to charge a minimum-quantity flat rate or a minimum cost-contribution flat rate for small orders.
4. In the case of blanket/call orders, we are entitled to procure the material for the whole order and to manufacture the entire quantity ordered immediately. Any change requests by the customer cannot be accepted after the order has been placed, unless this was specifically agreed.

Payment

1. Our invoices are payable in euro (EUR).
2. Invoiced amounts are payable (free of dispatch costs and other expenses) within 14 days after invoice date less 2% discount, or within 30 days after invoice date without deduction. Default interest is payable at the rate of 8% above the base interest if payment is late.
3. Cheques shall be regarded as cash payments, provided they have been sent to us in sufficient time that they can be cashed within the above payment periods.
4. Only payments made at the place of performance have the effect of discharging obligations. Payments made to employees of our company shall only discharge obligations if such employees have the appropriate collecting power (Inkassovollmacht).
5. If it becomes apparent after conclusion of the contract that our claim to payment may be in jeopardy because the customer is not able to discharge its obligations, then any other debt claims we have shall become due and payable immediately. In this event, we are entitled to make any remaining deliveries subject to payment in cash or the provision of security. This will not affect any further legal claims.
6. The customer may only set off payments against counterclaims which we have accepted or which have the authority of a final court judgment. This also applies to the retention of payments.

Tools and equipment

Tools and equipment which we manufacture or engage a third party to manufacture shall be our property, even if our customer pays part of the manufacturing costs.

Packaging

Paper packaging shall be subject to the lowest-possible charge. Chests, crates, barrels, sacks and other types of packaging shall be invoiced and, if returned freight-paid and in good condition within 4 weeks after receipt of the delivery, a credit note will be issued for 2/3 of the amount charged. In the event that a rail company classifies a delivery as inadequately packed, this may not be used against us.

Periods of delivery

1. The periods of delivery shall begin when all details of the order have been explained, however, not before the purchaser has fulfilled any contractual obligations which must be performed beforehand. The delivery date is deemed to have been met if the goods have left the warehouse by the end of such date or, if the delivery is delayed for reasons not attributable to us, on notification that the goods are ready for dispatch within the agreed period of delivery.
2. The delivery obligation is subject to the condition that dph has been supplied correctly and in due time by its suppliers.
3. Partial deliveries within the agreed time and quantities are permissible and may be invoiced separately.
4. If any acts of force majeure, industrial disputes or their consequences or other events which are outside the scope of our control delay the performance of our delivery obligation, regardless of whether they affect us or our sub-contractors, the period of delivery shall be extended by the length of such delay. Both parties shall have the right to cancel the contract if the delivery later becomes impossible or unreasonable for one of the parties due to an event of the above nature.
5. The purchaser is entitled to terminate the contract, in accordance with the legal provisions, in the event of delay or if delivery is impossible for reasons attributable to us. If the delivery is delayed and if the purchaser thereby suffers loss, it is entitled to demand a lump-sum amount as compensation for the delay. Such compensation shall be, for each full week of delay, 0.5% of the value of that portion of the total delivery which, as a result of the delay, cannot be used on time or in accordance with the contract, up to a maximum of 5% of such value.
6. If delivery is delayed at the purchaser's request, the purchaser shall be charged the costs of storage, commencing 2 weeks after notification that delivery is ready, subject to a minimum charge of 1% of the invoice amount for each week.

Tolerances

Any recommendations we give as to the use of our products are made to the best of our knowledge. The purchaser is at all times under an obligation to satisfy itself by means of its own enquiries that the goods delivered are suitable for the intended purpose. Deviations from samples and earlier deliveries are permissible if they do not affect quality and use. We reserve the right to deviations in quantity of $\pm 10\%$.

Complaints and liability for defects

1. Immediately after receipt, the purchaser must inspect the goods and give written notification promptly, or no later than within 10 days after receipt, of any obvious visible defects, incorrect quantities or incorrect deliveries, specifying the defect. In the case of latent defects, it must do this within 10 days after discovery of the defect.
2. If there are defects, we guarantee as follows: We shall, at our discretion, replace free of charge or repair all parts which prove to be unusable or whose use is not inconsiderably affected as a result of circumstances existing before risk was transferred.

- The purchaser is entitled to rescission of the contract or to a reduction in price if we allow a reasonable extension of time for post-performance or repairs to elapse without resolving the defect, or if more than one attempt at post-performance or repair does not resolve the defect. If we deliver a defect-free item for the purpose of supplementary performance, or if the purchaser rescinds the contract, then it must pay value-related compensation for the benefit derived. The value of the benefit derived shall be determined by pro rata temporis straight-line depreciation in the ratio between the actual period of use and the estimated useful life.
- The statutory limitation period of 2 years shall apply to notification of defects under Section 437 BGB (Bürgerliches Gesetzbuch – German Civil Code).
- The provisions below under "General Liability" shall apply to liability to pay compensatory damages for liability for defects.

General liability

- Without prejudice to the provisions under point 5 of "Periods for delivery", claims for damages of any kind in connection with and apart from liability for defects are excluded – for delay or impossibility, for breach of other contractual obligations, for mistakes on conclusion of the contract, for tort or for any other legal reason, in particular also for damages which do not occur to the items delivered themselves. There shall only be liability where there is intentional conduct, gross negligence, culpable injury to life, limb or health, defects which we have fraudulently concealed, on assumption of a warranty made regarding the existence of any specific feature or for defects in the items delivered, to the extent that there is liability under product liability laws for material damage to privately used items and for personal injury.
- We shall also be liable for culpable breach of essential contractual obligations. However, provided there is no gross fault, such liability shall be limited to damage which is deemed typical as regards this type of contract and reasonably foreseeable.

Returns

Returns which are not based on a legal claim shall only be accepted, carriage paid, with our express written consent. As compensation for the costs incurred on any return, we shall retain from the credit note a corresponding reduction in the net invoiced value of the goods, subject to a minimum of 20% of the net invoiced value of the goods.

Reservation of title

- The goods delivered shall remain our property until all outstanding amounts owed to us in connection with the business relationship, including incidental expenses, have been paid. If operating an open account, the property subject to the reservation of title shall be deemed to be security for our current account.
- If our goods are combined or mixed with other goods which do not belong to us, we shall have joint ownership in the new object or the mixed item in proportion to the invoice value of the goods subject to the reservation of title compared with the value of the other combined or mixed goods at the time they were combined or mixed. If, as a result of combination, the purchaser acquires sole ownership in the new item, it hereby assigns to us joint ownership in the new item in proportion to the invoice value of our goods subject to the reservation of title compared with the value of the other combined goods remaining at the time they were combined, and shall keep such item in custody for us using the care of a prudent merchant.
- Resale of the goods delivered, even if combined or mixed, is only permitted to resellers in the usual course of business and subject to the reservation of title and only if the debt claim arising from the resale is assigned to us. The purchaser may not pledge the goods as collateral nor transfer ownership therein by way of security, nor may it agree on a non-assignment clause. The purchaser must notify us immediately if there is any pledge or any other third-party action which may affect our rights.
- The purchaser hereby assigns to us in advance any outstanding debts owed to it from the resale or for any other legal reason in respect of the goods we have supplied, both existing and arising in future as soon as they come into being. We accept such assignment. The value of the goods subject to the

reservation of title shall be our invoice amount plus a security premium of 10% which shall however not apply if third-party rights present an obstacle to this. If our goods are resold after they have been combined or mixed with other goods, or if the new item which arises through combination is resold, the claim against the purchaser's customer will be assigned in the amount of the invoice value of our processed, combined or mixed item, or up to the amount which corresponds to our share in the joint property, if this is lower.

- The purchaser is entitled to collect the debt claims assigned provided that it duly fulfils its payment obligations to us.
- If the value of the security assigned to us exceeds our debt claims by more than 10% in total, we are under an obligation to release the securities of our choice upon request by the purchaser. Ownership in the goods subject to the reservation of title and the assigned debt claims shall pass to the customer on payment of all our debt claims in connection with the business relationship.

Property rights

If we have made our supplies in accordance with drawings, models, samples or other documents provided by the purchaser, the purchaser guarantees that third-party property rights are not breached. If a third party claims in such a case that we are breaching a property right, e.g. through the manufacture or supply of the goods, then we shall be entitled, without further inspection, to discontinue our activity subject to our other rights. The purchaser undertakes to notify us immediately if there are any risks of breach or alleged cases of breach as soon as they become known.

Place of performance, jurisdiction, applicable law, general

- The place of performance for deliveries and payments is Ammersbek. The courts of Ahrensburg will have jurisdiction for any disputes with traders or with people who do not have a legal domicile within Germany – even in the cases involving bills of exchange and cheques. We are also entitled, at our discretion, to bring an action against the purchaser before the courts which have jurisdiction in the place where the purchaser has its head office.
- German law will apply to the contractual relationship. The provisions of UN sales of goods law will not apply.
- The latest version of Incoterms 2000 will apply if clauses defined in the Incoterms are agreed.

Data storage

As required by Section 28 of the Bundesdatenschutzgesetz (Federal Data Protection Act - BDSG), we draw attention to the fact that the data necessary for the purposes of our business will be processed and stored using data processing equipment in accordance with Section 33 of the BDSG. The purchaser agrees that we may use the data obtained from our business relationship with it, in accordance with data privacy provisions, only for our own business purposes.

Severability and concluding provision

If any individual provisions of these Terms and Conditions should be void, this shall not affect the validity of the remaining provisions. Any provision which is void will be replaced by a valid provision which comes as close as possible to the purpose sought by the void provision. This is an English translation of the original Standard Terms and Conditions. In the event of any conflict or inconsistency between the English translation and the German original, the German original shall prevail. Neither the Company nor the Language Professional can accept liability for any direct, indirect, special, consequential or other losses or damages arising out of erroneous translations. Only the German version shall be deemed authoritative.

Important notes

- 1.** This catalogue replaces all previous issues.
- 2.** The catalogue is protected by copyright.
The duplication of it or any part of it is prohibited.
- 3.** The supply of dph components strictly adhere to our sales and delivery agreement and are subject to our conditions of payment.
- 4.** We reserve the right to modify our components as necessary.
- 5.** The original equipment part numbers, as well as SLP, Elring-No., etc. indicated in the catalogue only serve as a cross-reference comparison with dph numbers. They must not appear on any advice notes or invoices.
- 6.** All original part numbers of engine or vehicle manufacturers in this catalogue are mentioned for comparison reasons only and should not be used in contacts with vehicle owners.
- 7.** Every effort has been made to ensure that the information in this catalogue is correct at the time of printing, but dph cannot accept any responsibility for errors which may occur.

Qualität – made by dph Germany

High quality guarantees growing success

We have always supplied our customers with high quality seals for the following sectors: Automobile, hydraulic seals, mountings and other fields all at reasonable prices and quick delivery. We can count many well-known companies throughout the world as satisfied customers.

Four strategies guarantee our success:

- First rate products with top class quality assured
- Short delivery times due to our own stock levels
- Flexibility in the procurement of all parts
- Attractive pricing policy

Fully automated electronic quality checks and manufacturing to DIN standards guarantee continuous high quality products. To your advantage and always at very fair prices.

Perfect manufacturing and continuous quality assurance

Together we are strong – this is the maxim in our group. High quality is not achieved just as a result of monitoring but of production technique. Therefore, Dichtungspartner Hamburg receives the bulk of its products from OEM suppliers and from suppliers whose quality management is certified in accordance with DIN/ISO 9000/9001.

Despite this, we still think it is necessary to check the finished products thoroughly once more within our group according to DIN/ISO 9001. Our high-grade measuring instruments are checking the radial force of oil seals, the tensile strength of elastomers, the compression set and the surface quality by means of computer-based cameras and many more. The results of the checks are registered and filed. It is good to have confidence but qualification is better!

CU Copper
FE Iron
FZ Felt

Standard terms and conditions

Standard Terms and Conditions of Trade and Delivery, as established by Dichtungspartner Hamburg GmbH, Ferdinand-Harten-Str. 15, 22949 Ammersbek, Germany, hereafter referred to as "dph":

Application

The terms and conditions set out below form part of all contracts for services, supplies and quotations by dph. Sales shall be made solely on the basis of the terms and conditions below. Ancillary agreements and amendments shall only be deemed valid if in writing.

If our contracting partner has its own terms and conditions which differ from dph's terms and conditions, we shall only be bound by the aforementioned terms and conditions of the contracting partner if we specifically accepted them in writing on conclusion of the contract. We hereby specifically state that we shall not accept a counter-confirmation by the customer with reference to its own terms and conditions.

Quotations

All quotations are subject to change. We shall not be bound by any arrangements made orally, by telegraph or telephone until we have issued a written confirmation. Any details given in brochures, advertisements, etc., including prices, shall not be binding until specifically agreed in writing.

Prices

Our prices are given in euros (EUR) ex works and exclude German VAT. Prices exclude postage/delivery, packing and insurance.

Delivery

1. Prices are given ex works. Unless free delivery has been agreed, the purchaser shall bear the costs associated with dispatch/shipment. It shall also bear costs ex delivery destination. Freight refunds are not granted. The goods shall be insured only if the customer so requests in writing, and insurance shall be at the customer's expense.
2. Collection and dispatch of the goods ex works or distribution warehouse is in all cases at the customer's risk.
3. We reserve the right to charge a minimum-quantity flat rate or a minimum cost-contribution flat rate for small orders.
4. In the case of blanket/call orders, we are entitled to procure the material for the whole order and to manufacture the entire quantity ordered immediately. Any change requests by the customer cannot be accepted after the order has been placed, unless this was specifically agreed.

Payment

1. Our invoices are payable in euro (EUR).
2. Invoiced amounts are payable (free of dispatch costs and other expenses) within 14 days after invoice date less 2% discount, or within 30 days after invoice date without deduction. Default interest is payable at the rate of 8% above the base interest if payment is late.
3. Cheques shall be regarded as cash payments, provided they have been sent to us in sufficient time that they can be cashed within the above payment periods.
4. Only payments made at the place of performance have the effect of discharging obligations. Payments made to employees of our company shall only discharge obligations if such employees have the appropriate collecting power (Inkassovollmacht).
5. If it becomes apparent after conclusion of the contract that our claim to payment may be in jeopardy because the customer is not able to discharge its obligations, then any other debt claims we have shall become due and payable immediately. In this event, we are entitled to make any remaining deliveries subject to payment in cash or the provision of security. This will not affect any further legal claims.
6. The customer may only set off payments against counterclaims which we have accepted or which have the authority of a final court judgment. This also applies to the retention of payments.

Tools and equipment

Tools and equipment which we manufacture or engage a third party to manufacture shall be our property, even if our customer pays part of the manufacturing costs.

Packaging

Paper packaging shall be subject to the lowest-possible charge. Chests, crates, barrels, sacks and other types of packaging shall be invoiced and, if returned freight-paid and in good condition within 4 weeks after receipt of the delivery, a credit note will be issued for 2/3 of the amount charged. In the event that a rail company classifies a delivery as inadequately packed, this may not be used against us.

Periods of delivery

1. The periods of delivery shall begin when all details of the order have been explained, however, not before the purchaser has fulfilled any contractual obligations which must be performed beforehand. The delivery date is deemed to have been met if the goods have left the warehouse by the end of such date or, if the delivery is delayed for reasons not attributable to us, on notification that the goods are ready for dispatch within the agreed period of delivery.
2. The delivery obligation is subject to the condition that dph has been supplied correctly and in due time by its suppliers.
3. Partial deliveries within the agreed time and quantities are permissible and may be invoiced separately.
4. If any acts of force majeure, industrial disputes or their consequences or other events which are outside the scope of our control delay the performance of our delivery obligation, regardless of whether they affect us or our sub-contractors, the period of delivery shall be extended by the length of such delay. Both parties shall have the right to cancel the contract if the delivery later becomes impossible or unreasonable for one of the parties due to an event of the above nature.
5. The purchaser is entitled to terminate the contract, in accordance with the legal provisions, in the event of delay or if delivery is impossible for reasons attributable to us. If the delivery is delayed and if the purchaser thereby suffers loss, it is entitled to demand a lump-sum amount as compensation for the delay. Such compensation shall be, for each full week of delay, 0.5% of the value of that portion of the total delivery which, as a result of the delay, cannot be used on time or in accordance with the contract, up to a maximum of 5% of such value.
6. If delivery is delayed at the purchaser's request, the purchaser shall be charged the costs of storage, commencing 2 weeks after notification that delivery is ready, subject to a minimum charge of 1% of the invoice amount for each week.

Tolerances

Any recommendations we give as to the use of our products are made to the best of our knowledge. The purchaser is at all times under an obligation to satisfy itself by means of its own enquiries that the goods delivered are suitable for the intended purpose. Deviations from samples and earlier deliveries are permissible if they do not affect quality and use. We reserve the right to deviations in quantity of $\pm 10\%$.

Complaints and liability for defects

1. Immediately after receipt, the purchaser must inspect the goods and give written notification promptly, or no later than within 10 days after receipt, of any obvious visible defects, incorrect quantities or incorrect deliveries, specifying the defect. In the case of latent defects, it must do this within 10 days after discovery of the defect.
2. If there are defects, we guarantee as follows: We shall, at our discretion, replace free of charge or repair all parts which prove to be unusable or whose use is not inconsiderably affected as a result of circumstances existing before risk was transferred.

3. The purchaser is entitled to rescission of the contract or to a reduction in price if we allow a reasonable extension of time for post-performance or repairs to elapse without resolving the defect, or if more than one attempt at post-performance or repair does not resolve the defect. If we deliver a defect-free item for the purpose of supplementary performance, or if the purchaser rescinds the contract, then it must pay value-related compensation for the benefit derived. The value of the benefit derived shall be determined by pro rata temporis straight-line depreciation in the ratio between the actual period of use and the estimated useful life.
4. The statutory limitation period of 2 years shall apply to notification of defects under Section 437 BGB (Bürgerliches Gesetzbuch – German Civil Code).
5. The provisions below under "General Liability" shall apply to liability to pay compensatory damages for liability for defects.

General liability

1. Without prejudice to the provisions under point 5 of "Periods for delivery", claims for damages of any kind in connection with and apart from liability for defects are excluded – for delay or impossibility, for breach of other contractual obligations, for mistakes on conclusion of the contract, for tort or for any other legal reason, in particular also for damages which do not occur to the items delivered themselves. There shall only be liability where there is intentional conduct, gross negligence, culpable injury to life, limb or health, defects which we have fraudulently concealed, on assumption of a warranty made regarding the existence of any specific feature or for defects in the items delivered, to the extent that there is liability under product liability laws for material damage to privately used items and for personal injury.
2. We shall also be liable for culpable breach of essential contractual obligations. However, provided there is no gross fault, such liability shall be limited to damage which is deemed typical as regards this type of contract and reasonably foreseeable.

Returns

Returns which are not based on a legal claim shall only be accepted, carriage paid, with our express written consent. As compensation for the costs incurred on any return, we shall retain from the credit note a corresponding reduction in the net invoiced value of the goods, subject to a minimum of 20% of the net invoiced value of the goods.

Reservation of title

1. The goods delivered shall remain our property until all outstanding amounts owed to us in connection with the business relationship, including incidental expenses, have been paid. If operating an open account, the property subject to the reservation of title shall be deemed to be security for our current account.
2. If our goods are combined or mixed with other goods which do not belong to us, we shall have joint ownership in the new object or the mixed item in proportion to the invoice value of the goods subject to the reservation of title compared with the value of the other combined or mixed goods at the time they were combined or mixed. If, as a result of combination, the purchaser acquires sole ownership in the new item, it hereby assigns to us joint ownership in the new item in proportion to the invoice value of our goods subject to the reservation of title compared with the value of the other combined goods remaining at the time they were combined, and shall keep such item in custody for us using the care of a prudent merchant.
3. Resale of the goods delivered, even if combined or mixed, is only permitted to resellers in the usual course of business and subject to the reservation of title and only if the debt claim arising from the resale is assigned to us. The purchaser may not pledge the goods as collateral nor transfer ownership therein by way of security, nor may it agree on a non-assignment clause. The purchaser must notify us immediately if there is any pledge or any other third-party action which may affect our rights.
4. The purchaser hereby assigns to us in advance any outstanding debts owed to it from the resale or for any other legal reason in respect of the goods we have supplied, both existing and arising in future as soon as they come into being. We accept such assignment. The value of the goods subject to the

reservation of title shall be our invoice amount plus a security premium of 10% which shall however not apply if third-party rights present an obstacle to this. If our goods are resold after they have been combined or mixed with other goods, or if the new item which arises through combination is resold, the claim against the purchaser's customer will be assigned in the amount of the invoice value of our processed, combined or mixed item, or up to the amount which corresponds to our share in the joint property, if this is lower.

5. The purchaser is entitled to collect the debt claims assigned provided that it duly fulfils its payment obligations to us.
6. If the value of the security assigned to us exceeds our debt claims by more than 10% in total, we are under an obligation to release the securities of our choice upon request by the purchaser. Ownership in the goods subject to the reservation of title and the assigned debt claims shall pass to the customer on payment of all our debt claims in connection with the business relationship.

Property rights

If we have made our supplies in accordance with drawings, models, samples or other documents provided by the purchaser, the purchaser guarantees that third-party property rights are not breached. If a third party claims in such a case that we are breaching a property right, e.g. through the manufacture or supply of the goods, then we shall be entitled, without further inspection, to discontinue our activity subject to our other rights. The purchaser undertakes to notify us immediately if there are any risks of breach or alleged cases of breach as soon as they become known.

Place of performance, jurisdiction, applicable law, general

1. The place of performance for deliveries and payments is Ammersbek. The courts of Ahrensburg will have jurisdiction for any disputes with traders or with people who do not have a legal domicile within Germany – even in the cases involving bills of exchange and cheques. We are also entitled, at our discretion, to bring an action against the purchaser before the courts which have jurisdiction in the place where the purchaser has its head office.
2. German law will apply to the contractual relationship. The provisions of UN sales of goods law will not apply.
3. The latest version of Incoterms 2000 will apply if clauses defined in the Incoterms are agreed.

Data storage

As required by Section 28 of the Bundesdatenschutzgesetz (Federal Data Protection Act - BDSG), we draw attention to the fact that the data necessary for the purposes of our business will be processed and stored using data processing equipment in accordance with Section 33 of the BDSG. The purchaser agrees that we may use the data obtained from our business relationship with it, in accordance with data privacy provisions, only for our own business purposes.

Severability and concluding provision

If any individual provisions of these Terms and Conditions should be void, this shall not affect the validity of the remaining provisions. Any provision which is void will be replaced by a valid provision which comes as close as possible to the purpose sought by the void provision. This is an English translation of the original Standard Terms and Conditions. In the event of any conflict or inconsistency between the English translation and the German original, the German original shall prevail. Neither the Company nor the Language Professional can accept liability for any direct, indirect, special, consequential or other losses or damages arising out of erroneous translations. Only the German version shall be deemed authoritative.

Important notes

- 1.** This catalogue replaces all previous issues.
- 2.** The catalogue is protected by copyright.
The duplication of it or any part of it is prohibited.
- 3.** The supply of dph components strictly adhere to our sales and delivery agreement and are subject to our conditions of payment.
- 4.** We reserve the right to modify our components as necessary.
- 5.** The original equipment part numbers, as well as SLP, Elring-No., etc. indicated in the catalogue only serve as a cross-reference comparison with dph numbers. They must not appear on any advice notes or invoices.
- 6.** All original part numbers of engine or vehicle manufacturers in this catalogue are mentioned for comparison reasons only and should not be used in contacts with vehicle owners.
- 7.** Every effort has been made to ensure that the information in this catalogue is correct at the time of printing, but dph cannot accept any responsibility for errors which may occur.

Qualität – made by dph Germany

Dichtungspartner Hamburg

High quality guarantees growing success

We have always supplied our customers with high quality seals for the following sectors: Automobile, hydraulic seals, mountings and other fields all at reasonable prices and quick delivery. We can count many well-known companies throughout the world as satisfied customers.

Four strategies guarantee our success:

- First rate products with top class quality assured
- Short delivery times due to our own stock levels
- Flexibility in the procurement of all parts
- Attractive pricing policy

Fully automated electronic quality checks and manufacturing to DIN standards guarantee continuous high quality products. To your advantage and always at very fair prices.

Perfect manufacturing and continuous quality assurance

Together we are strong – this is the maxim in our group. High quality is not achieved just as a result of monitoring but of production technique. Therefore, Dichtungspartner Hamburg receives the bulk of its products from OEM suppliers and from suppliers whose quality management is certified in accordance with DIN/ISO 9000/9001.

Despite this, we still think it is necessary to check the finished products thoroughly once more within our group according to DIN/ISO 9001. Our high-grade measuring instruments are checking the radial force of oil seals, the tensile strength of elastomers, the compression set and the surface quality by means of computer-based cameras and many more. The results of the checks are registered and filed. It is good to have confidence but qualification is better!

Important notes

- 1.** This catalogue replaces all previous issues.
- 2.** The catalogue is protected by copyright.
The duplication of it or any part of it is prohibited.
- 3.** The supply of dph components strictly adhere to our sales and delivery agreement and are subject to our conditions of payment.
- 4.** We reserve the right to modify our components as necessary.
- 5.** The original equipment part numbers, as well as SLP, Elring-No., etc. indicated in the catalogue only serve as a cross-reference comparison with dph numbers. They must not appear on any advice notes or invoices.
- 6.** All original part numbers of engine or vehicle manufacturers in this catalogue are mentioned for comparison reasons only and should not be used in contacts with vehicle owners.
- 7.** Every effort has been made to ensure that the information in this catalogue is correct at the time of printing, but dph cannot accept any responsibility for errors which may occur.

Qualität – made by dph Germany

Dichtungspartner Hamburg

High quality guarantees growing success

We have always supplied our customers with high quality seals for the following sectors: Automobile, hydraulic seals, mountings and other fields all at reasonable prices and quick delivery. We can count many well-known companies throughout the world as satisfied customers.

Four strategies guarantee our success:

- First rate products with top class quality assured
- Short delivery times due to our own stock levels
- Flexibility in the procurement of all parts
- Attractive pricing policy

Fully automated electronic quality checks and manufacturing to DIN standards guarantee continuous high quality products. To your advantage and always at very fair prices.

Perfect manufacturing and continuous quality assurance

Together we are strong – this is the maxim in our group. High quality is not achieved just as a result of monitoring but of production technique. Therefore, Dichtungspartner Hamburg receives the bulk of its products from OEM suppliers and from suppliers whose quality management is certified in accordance with DIN/ISO 9000/9001.

Despite this, we still think it is necessary to check the finished products thoroughly once more within our group according to DIN/ISO 9001. Our high-grade measuring instruments are checking the radial force of oil seals, the tensile strength of elastomers, the compression set and the surface quality by means of computer-based cameras and many more. The results of the checks are registered and filed. It is good to have confidence but qualification is better!

King pin kit

dph-no.	OEM-no.	application
46794	3 090 267-0	F86, FB86, F87, F88, FB88, F89, G89, N86, NB86, N7, N10, N12, B57, BB57, B58, B59 late production F6S, FE6, FL616-617, F7, FE7, FL7, FS7, F10, FL10, F12, F16, N10BR MK2, NL10Australia, NL10BR, N12BR MK2, NL12Australia, NL12BR, B58BR, B6, B7 ch.20000-, B7F, B7FA, B9M, B10M, B10MBR, B10R king pin upper: diam. 48 mm
46795	3 090 266-2	FL618-19, F7, FE7, FL7, FS7, F10, FL10, F12, F16, FH16, N7, N10, N10BR MK2, NL10BR, NL10S, N12, N12BR MK2, NL12 BR, NL12S, B9M ch.20001-, B10B, B10L, B10M ch.20001-, C10, B12, B12BR Olympian MK2 king pin upper: diam. 50 mm

Expansion pin for anchor pin

dph-no.	OEM-no.	application
46791	951 982-8	For anchor pin 1 584 671-0
46792	951 983-6	For anchor pin 1 584 673-6, 1 586 716-1

Pinion Z-cam

dph-no.	OEM-no.	application
81008	1 696 924-8	FL616-619*, FL7, F10, FL10, F12, FH12, FL12, F16, FH16, N10, NL10 Australia, NL10S, N12, NL12 Australia, NL12S, B7 ch. 20000-29999, B10B, B10BLE, B10L, B12, B12BR *for trailing wheel brake 6x2 special S-60657, S-60917 left
81009	1 696 925-5	FL616-619*, FL7, F10, FL10, F12, FH12, FL12, F16, FH16, N10, NL10 Australia, NL10S, N12, NL12 Australia, NL12S, B7 ch. 20000-29999, B10B, B10BLE, B10L, B12, B12BR *for trailing wheel brake 6x2 special S-60657, S-60917 right

Front and rear axel parts

Oil seal

dph-no.	OEM-no.		application
80493	1 522 373-8		Rear axle Size: 50x65x80 B WD FPM dph
69293	1 522 894-3		Rear axle Size: 80x150x12/20 SP RD LA FPM dph
80047	338 425		Size: 25x35x8 NBR AD Steering
69289	943 250-1		63,5x110x12 BS LD FPM dph rear axle
80881	944 665-9		148x168/170x32 B WD NBR dph rear axle
94316	944 671-7		126x173x15 C Spezial NBR front and rear

Oil seal

dph-no.	OEM-no.	application
80013	946 026-2	Size: 152,4x120,65x13/12 NBR dph front and rear
108798	947 270-5	Size: 85x110x13 A NBR front axle
69291	948 642-8	Size: 90x125,25x10 BS RD LA FPM dph rear axle

Oil seal steering gear

dph-no.	OEM-no.	application
36627	341 050-3	F84-85, F88, FB88, G88, F89, G89, F6, FE6, FL608-615, FL616-19, F7, FE7, FL7, F10, FL10, FS10, F12, F16, N84, N86, NB86, N88, NB88, N7, N10, N10BR MK2, NL10Australia, NL10BR, NL10S, N12, N12BR MK2, NL12Australia, NL12BR, NL12S, B57, BB57, B58, B58BR, B59, B6 ch.5000-, B7, B7F, B7FA, B9M, B10B, B10M, B10MBR, B10R, B12, B12BR for ZF-steering gear

Oil seal pinion differential carrier

dph-no.	OEM-no.	application
36626	1 522 895-0	F86, FB86, F87-88, FB88, F89, G89, F6S, FE6, FL616-619, F7, FE7, FL7, F10, FL10, F12, FH12, F16, FH16, N86, NB86, N88, NB88, N7, N10, N10BR MK2, NL10Australia, NL10BR, N12, N12BR MK2, NL12Australia, NL12BR MK2, B57, BB57, B58, B58BR, B59, B7, B7F, FA, B9M, B10B, M, MBR, R, C10M for rear axle types: DR80, EV71, EV80, 80B, EV8181B+C, EV82, 82B also for transfer gearbox: F88, FB88, G88, F89, G89, F10, F12, N10, NL10S, N12

Oil seal companion flange differential carrier

dph-no.	OEM-no.	application
59232	948 448-6	F86GB, F7, FL7, F10, FL10, F12FH12, F16, FH16, N10, N10BR MK2, NL10Australia, NL10BR, NL10S, N12, N12BR MK2, NL12Australia, NL12BR, NL12S for tandem rear axle for rear axle types: CT EV, RT EV, RT N

Oil seal front wheel hub

dph-no.	OEM-no.	application
70269	191 160-1	F86, FB86, F87, N86, NB86, N88, NB88 early production, front axle pressure 5 t also for rear axle hub to F83S
36375	944 667-5	F86, FB86, F88, FB88, G88, F89G89, F6S ch.3146-6499, F7*ch.-27087, F10*ch.-26821, F12*ch.-36736 N7*ch.-12099, N10*ch.-52439, N10BR MK2*, N12BR MK2*, N12*ch.-15169, B57, BB57, B58, B58BR B7F, B7FA ch.-10521, B9M**, B10M**, B10MBR**, B10R ch.-3906 *with front axle pressure 6,5 t ** with grease lubricated hubs

Oil seal front wheel hub, trailing wheel hub

dph-no.	OEM-no.	application
46716	1 089 552-2	
46810	1 587 792-1	
		FE615, FL616-619, FE7, FL7, FS7, FL10, FS10, FH12, F16, FH16, NL10S excl.6x4, NL12S excl.6x4, F7 ch.27088*, F10 ch.26822*, F12 ch.36764, N7 ch.12001*, N10 ch.52440*, N12 ch.15170*, B6 ch.865-4999, B7F, B7FA ch.10522-, B10R ch.3907-, B7, B9M, B10B, B10L, B10M, B10MBR, C10M, B12 *with front axle pressure 6,5 tons and all with 7,5/8 tons For trailing wheel hub to: F7, FL7, F10, FL10, F12, F16, B9M, B10M, B12 Size: 110x140x12/21 NBR *S-ride, air suspension

Oil seal inner, rear wheel hub

dph-no.	OEM-no.	application
98342	1 610 765-8 FPM	
		F86, FB86, F87, F88/FB88/G88 ch.36634, F89, G89, F7, FL7, F10, FL10, F12, FH12, F16, FH16, N86/NB86 late production N7, N10, N10BR MK2, NL10Austral., NL10BR, NL10S, N12, N12BR MK2, NL12Austral., NL12BR, NL12S, B57, BB57 ch.3405-7980, B58BR, B7 ch.30000-, B7F, B7FA, B9M, B10B, B10BLE, B10L, B10BR, B10R, C10M, B12, B58AUS, Olympian MK2 Size: 168x188/192,5x30 FPM B WD SP

Sealing kit outer, rear wheel hub

dph-no.	OEM-no.	application
80969	3 090 331-4	
		F84-86, FB86, F87-88, FB88, G88, F89, G89, F6S ch.-6871, FL618-619 chid. Oil seals

Company

Since our establishment in 1986 we have concentrated entirely on quality products which provide our discerning customers with the high value and quality that they have come to expect.

Our company headquarters including the production plant and main warehouse is located in the lovely rural suburbs of Hamburg. Here, on an area covering more than 7,500 m², we have the hub of our operations, from which we distribute worldwide. We also have multiple branches in South Africa and Turkey, as well as in China and Dubai. In addition, our close-knit network of representatives and distributors ensures that we are close to our customers all over the world.

We see quality, flexibility and reliability as being inseparably linked. Our large product range is growing constantly and is subject to comprehensive quality management and orientated to the specific needs of the individual markets into which we supply.

Our slogan is "Seal it with a smile".

Because what counts most for us is that you are satisfied with our products and services.

Manufacturing

Only state-of-the-art manufacturing allows the production of rubber and special seals corresponding to the unique requirements of the world's markets and ensures their sales and distribution.

When we talk about being market driven, we mean

- **top quality**
- **short delivery times**
- **fair pricing**

Our production facility is outfitted with the latest technical equipment and upgraded continually. The experience and expertise of our production staff are further features of our high manufacturing quality.

The know-how of our design engineers guarantees short production times for the necessary tools and makes us independent of upstream suppliers. We maintain a comprehensive raw materials warehouse and have a production area which is ideal for the size of our business. Our wide range of machinery enables us to perform the tasks placed before us in terms of size and feeding.

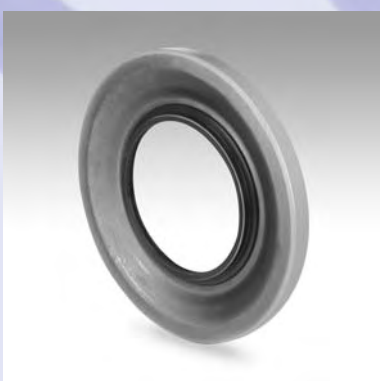

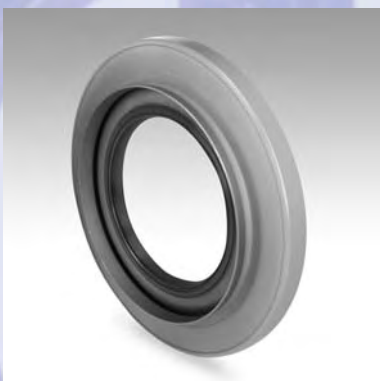

Besides having our own tool shop, our extensive stock of standard dimensions ensures short delivery times. Our product range encompasses well over 150,000 articles. More than 20,000 different products are continuously available from stock.

Radial oil seals

Dear Customers,

There is a lot to be said about radial oil seals. Much is technical, much scientific and much quite complex. If we were to present all of this here, we would end up with a breadth and depth extending far beyond what is really essential.

The essential is and remains: **the best products and the maximum processing reliability for your own individual applications.**

Accordingly, at this point we will be concentrating on the essential. We will be bringing you fully up to date with developments and presenting you with brief details of our radial oil seals in concentrated form.

However, it goes without saying that if you require any further details or should have any related questions, please do contact us and we will be happy to support you.

Your Dichtungspartner Hamburg team.

What are radial oil seals?

Radial oil seals are used to seal machine housings to prevent them being impaired in their function due to contained elements escaping. These include rotating machine elements (internal impairment) and dirt contamination (external impairment).

The choice of proper seal depends on the predominant operating parameters. Apart from the operating medium, operating temperature, rotational speed of the shaft and the pressure involved, these parameters also include the environmental conditions on the atmospheric side.

The radial oil seal consists of an elastomer component, a reinforcing ring and a spring. Specifically:

- The external surface guarantees reliable static sealing. It secures the radial oil seal in place in the casing.
- The external cover consists either of an elastomer or metal material.
- The reinforcing ring provides the radial oil seal with the required stability. The sealing lip is also pre-tensioned by a spring. This guarantees that the sealing lip makes secure radial contact right around the shaft. A protective lip is also available as an option, preventing the penetration of dirt and dust from the outside.

The other special advantage of the radial oil seal is that with its simple construction it is easy to install or remove.

What is the purpose of the oil seal?

The function of radial oil seals is to guarantee functional tightness, and therefore guarantee the reliability of the process as a whole. The aim is to keep secondary mechanical influences on the shaft to a minimum, so as to reduce the generation of heat and loss of performance within the sealed environment to the lowest possible level.

Where do we find oil seals in use?

Radial oil seals are used to seal rotating machine elements such as axles, hubs and shafts. They are used in a large number of sectors, including:

- transmission technology
- the agricultural and construction machinery industry
- domestic and industrial washing machines
- the wind power industry
- shipbuilding
- the pump industry
- rolling mills.

What standards are applicable?

Dichtungspartner Hamburg's radial oil seals comply with the DIN 3760 standard.

What construction types are there?

We differentiate between three basic types:

1. Construction type A features an elastomer external cover guaranteeing outstanding static sealing properties.
2. Construction type B is characterised by a metallic external surface which guarantees that the seal is seated firmly and precisely within the casing.
3. Construction type C - used in conjunction with construction type B - provides the degree of enhanced rigidity necessary for more demanding installation conditions and the more severe operating conditions, through the use of a reinforcing ring.

Surfaces and materials

What external surface finishes are available?

For the most part, our radial oil seals are available with an elastomer external cover or an AW external surface. We also produce combinations of these in the form of special designs for special requirements.

Rubber-enclosed external surface, construction types A and AS

Radial oil seals of construction type A often feature a smooth external cover in an elastomer material. This guarantees static tightness in the casing bore, even in critical situations. Also available with an AS protective lip.

Properties and applications:

- Excellent static sealing.
- Can be used with split casings, with any edge break or offset ends.
- With light metal casings susceptible to a high degree of heat expansion (casings with a greater expansion coefficient than steel).
- With thin-flowing or gaseous media.
- For pressurised applications within the limiting operating parameters.
- Sealing for greater degrees of surface roughness.
- Avoids the creation of frictional corrosion.
- Avoids damage to the casing bore during assembly and dismantling.

Grooved, rubber-enclosed external surface: construction type AW

To reduce compression force and to improve static tightness, the elastomer external cover is peripherally grooved.

Properties and applications:

- Easier to install due to lesser compression force.
- Reliable static sealing, especially for casings generating greater amounts of heat.
- Avoids the radial oil seal being left in an offset position.

Metallic external surface, construction types B and BS

With radial oil seals of construction type B, the smooth metallic external surface of the reinforcing ring has been finely ground, drawn or turned, as opposed to covered. Also available with BS protective lip.

Properties and applications:

- Firm and precise seating in the bore.
- More cost-effective, due to reduced proportion of elastomer.
- External surface provided with a narrower press fit tolerance.
- Good surface quality required for casing bore.
- Not suitable for use in split casings (also with seal-lock coating, only suitable for use in split casings to a limited extent).
- Where the casing generates a lot of heat, rough bore surfaces, pressurised applications or thin-flowing creeping media, an additional sealing compound should be applied to the external surface.

In order to prevent corrosion, after final processing the metallic external surface is coated with anticorrosion oil or has a thin coating of wax applied to it.

Metallic external surface with reinforcing ring, construction types C and CS

Radial oil seals of construction type C feature the same smooth and metallic external surface as those of construction type B. They can be provided with the metallic reinforcing ring and are also available with a CS protective lip.

Properties and applications:

- In more demanding installation conditions, heavy-duty operating conditions and for larger dimensions.
- Radial oil seals of construction type C offer greater rigidity than radial oil seals of construction type B.
 - Construction type C is extremely sensitive to installation faults.

Partially rubber-enclosed external surface: construction type A/B

Special version of external surface of radial oil seal. This combines the advantages of construction types A and B. Construction type A/B can also be used with casings subject to greater degrees of heat expansion and split casings. Construction types A/BS and AW/BS are also possible.

What additional sealant materials are used?

For enhanced static sealing in the casing bore, radial oil seals with a metallic external surface are frequently coated with sealing lacquer or sealing compound. Waxes or sealing lacquers are applied to protect against corrosion.

The sealing lacquer smoothes out processing traces on the external surface of the radial oil seal as well as any unevenness in the casing bore, as well as dealing with greater degrees of heat expansion. It also protects against damage to the casing bore during installation or dismantling.

Sealing lacquers are available in a variety of colours.

What material is used for springs?

The material normally used for standard springs is unalloyed spring steel to DIN EN 10270-1.

What materials are used for the reinforcing ring casing?

The standard material used is unalloyed steel to DIN EN 10139. Stainless and acid-resistant steel is used as a special material.

What materials are used for radial oil seals?

Depending on construction type and area of application, there is a variety of standard and special materials available for radial oil seals.

Elastomer materials are designated in accordance with the relevant DIN ISO 1629 and ASTM D 1418 abbreviations. Chemically produced synthetic rubber is used as the basic material for elastomer materials for radial oil seals. The individual elastomers are differentiated by their basic polymer.

The finished material is produced by mixing the basic elastomer with the corresponding auxiliary processing materials, vulcanisation materials, fillers, accelerators, softening agents and other additives. With this as the basic procedure, it is possible to adjust the desired material properties to allow for the production of both standard materials and special mixtures.

The radial oil seal is shaped by means of a vulcanisation process. The reinforcing ring is bonded to the elastomer component and the plastic and rubber mixture develops into its rubber-elastic state. The radial oil seal now achieves its final mechanical properties.

The sealing edge has already been created in the moulding tool or is parted off at this point. The spring is then fitted.

Material properties

What properties do the standard materials display?

Radial oil seals are available in two standard elastomer materials and two PTFE materials. We can supply both either immediately from our stores or at short notice.

NBR Acryl Nitrile Butadiene Rubber

- The material most frequently used for radial oil seals. Good mechanical properties, a high degree of resistance to mineral-oil-based lubricating oils and lubricating greases. Good resistance to fuels can normally only be achieved from special mixtures.
- Properties are primarily determined by the proportion of ACN. A low proportion results in a high degree of flexibility at low temperatures, however restricted resistance to oils and fuels. As the proportion of ACN is increased, flexibility in cold conditions is reduced while resistance to oil and fuels rises.
- The standard NBR material for radial oil seals displays an average proportion of ACN, with these balanced properties covering a wide range of applications. Mechanical-technological values are high: a high degree of resistance to abrasion and good resistance to mineral-oil-based lubricating oils and greases, hydraulic pressure oils H, H-L, H-LP, non-flammable pressurised fluids HFA, HFB, HFC, aliphatic hydrocarbons, silicone oils and silicone greases, water temperature up to approx. +80°C.
- NBR provides no resistance in aromatic and chlorinated hydrocarbons, polar solvents, fuels with a high aromatic content, glycol-based brake fluids and non-flammable HFD pressurised fluids.
- While the degree of resistance to ozone, weathering and ageing is low, in most cases this does not have a disadvantageous effect, for example when the material is treated with a coating of oil.

FPM - Fluorine Rubber

- Outstanding resistance to temperature and chemicals, outstanding resistance to ageing and ozone and low level of gas permeability, self-extinguishing reaction to fire.
- Optimum resistance properties in mineral oils and mineral greases, synthetic oils and synthetic greases. Similar properties in aliphatic, aromatic and chlorinated hydrocarbons, fuels and non-flammable pressurised fluids HFD, and many organic solvents and chemicals.
- Provides no resistance in hot water and steam, polar solvents, glycol-based brake fluids and low-molecular organic acids.

PTFE - Polytetrafluoroethylene

- Fluorinated plastic, physiologically non-harmful. Provides an almost universal range of resistance to chemicals, a wide thermal range of application (-90°C to +250°C) and a very low abrasion coefficient. Very high resistance to ozone, weathering and ageing. For radial oil seals, use is normally made of PTFE compounds with filler materials such as carbon, graphite or glass fibre.
- PTFE is used for sealing lips, coatings on sealing lips and entire radial oil seals, as soon as specific demands are made in terms of media resistance, thermal resistance, low abrasion or greater pressure and rotational speed.

What properties do the special materials display?

The special materials are used for special peripheral conditions.

HNBR - Hydrated Acryl Nitrile Butadiene Rubber

- Improved resistance to heat, ozone and ageing.
- Good mechanical properties, for example resistance to wear.
- Media resistance properties comparable with NBR.

NBR High Nitrile

- Higher resistance to oil and fuels than standard NBR.

NBR High Temperature

- Wider temperature application range than standard NBR, can be used at constant temperatures of up to +120°C.

NBR Low Temperature

- Wider minus temperature application range, can be used at temperatures between -50°C and +90°C.

NBR Graphite / NBR MoS₂

- The addition of certain filler materials provides optimised-abrasion running properties.

MVQ - Silicone Rubber

- Wider range of thermal application, outstanding resistance to ozone, weathering and ageing.
- Restricted mechanical properties.
- Generally physiologically non-harmful.
- Can be used in temperature ranges from -50°C to +200°C.
- Resistant to aliphatic engine and transmission oils, animal and plant oils and fats.
- No resistance to fuels, aromatic mineral oils, steam, silicone oils and silicone greases, and to acids and alkalis.

ACM - Acrylate Rubber

- High resistance to engine, transmission and ATF oils.
- Range of application between NBR and FPM.
- Can be used at temperatures between -25°C and +150°C.

EPDM - Ethylene Propylene Diene Rubber

- Good resistance in hot water and steam, detergents, caustic potash solutions, silicone oils and silicone greases, many polar solvents and many diluted acids and chemicals.
- Wide range of thermal applications.
- Totally unsuitable for use with lubricants and fuels.

Sealing mechanism

The sealing mechanism: how does this behave in terms of static tightness at the external surface?

The primary function of the radial oil seal is to guarantee static tightness in the casing bore.

The other requirements imposed on the external surface:

- To guide and guarantee the secure seating of the radial oil seal in the bore.
- To facilitate assembly by means of chamfers and curvatures.
- To provide compensation for gaps by means of a variety of heat expansion coefficients.

In the final analysis, the selection of the correct external surface depends on the specific application and the predominating operating conditions.

What is the dynamic sealing mechanism?

The functional principle by which the radial oil seal operates is that the elastomer sealing edge floats on the rotating surface of the shaft. The sealing edge is pressed against the surface of the shaft in a radial direction, as the internal diameter of the sealing lip in its tension-free state is smaller than that of the shaft diameter.

The radial force generated on the contact area is supported by means of a metallic screw tension spring to counteract the gradual decrease in the radial force.

The sealing effect at the elastomer sealing edge is achieved for the functional statuses of the shaft at a standstill and for the rotating shaft, and depends on the following parameters:

- the geometry of the sealing lip
- the properties of the elastomer material
- the design of the spring
- the surface finish of the shaft
- the lubrication status.

What provides the sealing effect with the shaft at a standstill?

In this case, it is provided by the radial contact pressure of the sealing lip exerted on the twist-free milled surface of the shaft. A radial force exerted on the shaft. The contact pressure against the sealing lip is achieved by means of pre-tensioning and is supported by the screw tension spring. The release of the elastomer pre-tensioning effect during operation is dependent on the operating parameters.

What provides the sealing effect with the shaft turning?

The rotational movement of the shaft produces a hydrodynamic effect. This results in the sealing lip floating over the film of lubricant formed by the medium to be sealed. This protects the sealing lip from premature wear and thermal destruction.

What is the reaction to permitted speeds and rotational speeds?

In order to prevent excessively high temperatures at the sealing lip which might result in a hardening of the elastomer or the formation of oil carbon deposits the rotational speed must be limited. For shafts of greater diameter, higher rotational speeds are permitted than for shafts of lesser diameter. The reason for this is that the shaft cross-section increases in relation to the square of the diameter, and this gives rise to considerably more favourable possibilities for heat dispersal.

What role is played by the temperature?

As a result of the rotation of the shaft and the friction this creates at the sealing lip, the actual temperature at the sealing lip is higher than in the oil sump. This temperature differential represents the excess temperature. It is dependent on the following factors:

- rotational speed
- lubrication status / oil level
- heat dispersal
- pressure load
- surface finish of the shaft
- the material of the radial oil seal.

As the rotational speeds increase, the excess temperature at the sealing lip rises correspondingly. If the maximum permitted operating temperatures for the various elastomer materials are exceeded, this gives rise to premature hardening and increased wear.

What is the reaction to the media to be sealed?

The chemical resistance of the radial oil seal to the media in use has a crucial effect on the service life of the seal.

- To seal aggressive media, for many application cases construction types A/AS in the material FPM are more suitable than construction types in NBR.
- Radial oil seals in FPM withstand higher chemical and thermal loads.
- Construction types A/AS equipped as standard with stainless and acid-resistant steel springs, with the metallic reinforcing ring provided with an elastomer coating.
- For even greater requirements in terms of media resistance, we recommend the construction types CV 20 and EPTO.
- For mineral oil-based oils and fats, a good level of resistance is provided by the standard materials NBR and FPM. For synthetic oils and fats, resistance problems might possibly arise due to a variety of factors.

Installation parameters

Friction statuses and lubrication

In the interaction of the machine components of the shaft, radial oil seal and lubricant, we have three components or materials coming together. This gives rise to a tribological system. At any point of friction, the lubricant is of equal status with the solid components. It influences the operating reliability and service life of the tribological system to a great extent.

1. Dry running

Under no circumstances must the shaft be allowed to rotate against the radial oil seal without lubrication. Accordingly, on assembly the sealing lip of the radial oil seal must be lightly greased.

Dry-running applications call for special construction types and materials, such as radial oil seals with a PTFE sealing lip.

2. Greasing

Where lubrication is purely by greasing, the dispersal of friction heat is considerably less than in the case of oil lubrication. This type of greasing should only be used with slowly rotating shafts.

For sealing slowly rotating shafts, the space between the radial oil seal and the bearing should be almost completely filled with grease. If there is no suitable lubricating grease available, we recommend using a radial oil seal with a PTFE sealing lip.

3. Sealing media with poor lubricating properties

In this case, to achieve adequate lubrication of the sealing edge, a grease filling between the sealing and the protective lip (maximum two thirds of the space) must be provided. Even more effective is a pair of radial oil seals arranged one after the other with an intermediate grease filling (maximum two thirds) to make secondary lubrication possible.

4. Hydrodynamic sealing aids

Where the normal feed effect of the radial oil seal is inadequate, so-called "rifling" can be used as an additional hydrodynamic sealing aid. This takes the form of raised return feed ridges. The way in which the rifling works corresponds to that for a simple threaded shaft seal.

Pressure as an operating parameter

1. Non-pressurised operation

Radial oil seals are generally designed for non-pressurised operation.

2. Operation under pressure

The load combination of pressure and rotational speeds is crucial for the selection of the correct radial oil seal ring.

3. Pressure load for standard construction types

Standard radial oil seals are designed to still be adequate for very low pressures and seal spaces with slight pressure differentials, for containing fluids, greases and air.

What is achieved by construction type V as a pressure-bearing version?

We recommend construction type V for pressure differentials greater than 0.5 bar, pulsed pressures and vacuum applications.

This construction type is designed with a short reinforced sealing lip with a metal cage below it. As a result of the pressure, the increase in contact force is reduced, with the greater abrasive effect and premature wear being reduced.

What is the function of supporting rings?

Pressure differentials greater than 0.5 or can also be sealed using a standard radial oil seal and an additional steel supporting ring. This combination caters for pressures depending on speed of up to around 10 bar. Only construction types without a protective lip can be used.

Everything you need to know about the installation space

1. The shaft

The shaft is a crucial element in the rotation-sealing system. It must fulfil a number of technical requirements if it is to guarantee an effective sealing effect.

The exact design of the shaft in the running surface area of the radial oil seal's sealing edge is also crucial for the service life and sealing function of the rotation-sealing system.

2. Tolerances (DIN 3760)

ISO Tolerance Range h11 should be applied for the shaft diameter d1 in the running surface area of the radial oil seal's sealing edge. Tolerance Class IT 8 (DIN ISO 286) is required for the roundness of the shaft.

3. Surface finish of the shaft

The shaft must be processed so that it is round at its running surface area. If the surface of the shaft is too rough this will result in premature wear in the sealing edge.

4. Surface hardness of the shaft

Another factor crucial for the service life of the sealing point is the hardness of the running surface on the shaft. In terms of surface hardness, an effective hardening depth of at least 0.3 mm is required.

The decision on the suitability of individual shaft surfaces (chrome-plated, cadmium-plated, nitration-hardened, phosphatised) must be taken on the merits of each individual case.

5. The running surface area

The running surface area must be specified with reference to the width of the stipulated seal.

6. Processing the shaft surface

In the running surface area of the sealing edge, the shaft must be milled twist-free and completely circular if the sealing function is to be guaranteed.

The following processing techniques can be used:

- plunge-cut grinding
- hard turning

7. Twist-free shaft surface

It is essential that the shaft's running surface area has been produced completely twist-free. Twist-free means that the traces left by processing do not run off at any angle.

8. Shaft materials

The standard tempering steels are suitable as shaft materials, as long as the values for surface hardness are observed. Hard-chrome plated shafts and plastic shafts are of limited suitability. The following statement applies generally for all shaft surface materials: the stipulated values in terms of quality and hardness must be observed.

If the shaft is not provided with the required running surface properties, then use must be made of corresponding shaft protection sleeves.

Dichtungspartner Hamburg offers you a range of shaft protection sleeves in all dimensions and in a variety of materials.

9. Radial run-out

Any radial run-out or dynamic eccentricity in the shaft must be kept to an absolute minimum.

Accordingly, the radial oil seals should be fitted in the immediate vicinity of the bearing and bearing play minimised.

10. Shaft chamfer

The sealing lip must not be damaged on installation, to ensure that the sealing lip is not angled over.

11. Damage to the shaft

It is essential that no damage of any kind is caused to the running surface of the shaft. We recommend that shafts be carefully protected in transit between production and assembly. Transportation devices or specially cast or slide-over protective plastic sleeves are suitable for the purpose.

Mounting conditions

About the casing bore

The design and construction of the casing bore are crucial for static sealing. The following conditions must be fulfilled if a secure and tight seating in the casing bore is to be achieved:

- tolerances
- casing dimensions
- chamfer on the casing bore
- surface quality of the casing bore

The coaxiality of the casing bore results in uneven distribution of the contact force at the circumference. Numerous disadvantageous processes arise out of this situation. Accordingly, any discrepancy in coaxiality must be kept to a minimum.

In the selection of construction type for the radial oil seal and the material of the casing, consideration must be given to the heat expansion coefficient in all cases.

About heat expansion

The heat expansion properties of the material of the radial oil seal and of the casing are important for the static sealing process in the casing bore. From the thermal point of view, casings made of steel or cast iron offer the greatest advantages, used in combination with a radial oil seal with a rubberised external cover.

About an offset angled position

The installed radial oil seal must be centred as far as possible and installed perpendicular to the shaft.

About the degree of rigidity

Casings are frequently designed with thin walls. When fitting radial oil seals into thin-walled casing bores or seating recesses of lesser rigidity, the problem of the casing being severely expanded can arise. We recommend the use of radial oil seals with a rubberised external cover or using another casing bore tolerance.

Split casings

Thanks to the good elastic malleability of elastomer and of the mould filler, the required degree of static sealing can be achieved with construction type A. This means that even split casings featuring a variety of split levels and even an offset separation joint can be reliably sealed.

All about installation

Proper installation is crucial. Radial oil seals are installed in accordance with DIN 3760.

Prior to installation, both the installation space and the radial oil seal should be carefully cleaned.

Ideally, a hydraulic or mechanical pressing device should be used to push the radial oil seal into the casing bore. The pressing tool should be held in its final position for some time. Where the radial oil seal has to be guided over sharp-edged shoulders, the appropriate installation sleeves should be provided. The sleeve itself must not display any damage or rough surfaces. For the radial oil seal to be securely seated, the external cover must be located completely within the casing bore.

All about special applications

1. Under-pressure or vacuum sealing

To seal a shaft against under-pressure use is made of radial oil seals corresponding to the pressure gradient at the sealing lip on the atmospheric side. Where grease is used, the outer radial oil seal must also be installed with its sealing lip facing out to the atmospheric side.

2. Separating two media

To separate two spaces containing different media one from the other, use is made of two radial oil seals with their sealing lips facing in opposite directions.

A further option for separating two media at lower to medium rotational speeds is the use of our construction types AD and BD, which in their design combine two sealing lips arranged in opposite directions within a single seal.

3. Sealing in the presence of severe external dirt/contamination

The effects of external dirt and contamination result in premature wear to both seal and shaft surface. Depending on the type and quantity of the contamination arising, protection should be provided for the sealing lip. Under extreme conditions such as with agricultural and construction machinery cassette seals should be used.

4. Sealing with contaminated media

Contaminated media or media containing abrasive materials cause a high degree of wear in the area of the seal. This can be countered by installing a second seal before the first, or with the use of our VRM axial seal.

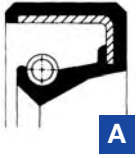

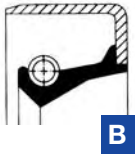

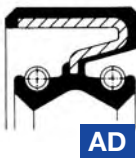

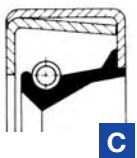

Correct storage of elastomer products

In their specific properties, elastomers remain practically unchanged for a period of years, as long as certain minimum requirements in terms of their storage conditions are observed (refer to DIN 7716 and ISO 2230).

- Seals should be stored free of tension.
- They should be protected from any pronounced change of air. We recommend storage in a polyethylene bag or in airtight containers.
- Storage conditions cool, dry, low-dust and only moderately ventilated.
- Storage temperature not below -10°C and not above $+20^{\circ}\text{C}$.
- Heat sources/radiators should be screened and kept at a distance of at least one metre.
- Relative humidity should not exceed 65%.
- Strong lighting (above all UV radiation and direct sunlight) should be avoided.
- No use should be made of electrical equipment generating ozone.

Seal types

Overview of most popular oil seal types acc to DIN 3760/3761

Application	Description	Application	Description
 A	rubber version with single lip	 B	metal cased open
 AS	rubber version with sealing and dust lip	 BS	metal cased open with dust lip
 AD	rubber version with 2 lips and 2 springs	 C	metal cased closed
 AW	rubber version with sealing lip and corrugated profile	 CS	metal cased closed with dust lip
 ASW	rubber version with sealing lip and dust lip and corrugated profile	 BD	metal cased open with lips
 A/B	seal with combined elastomer/metal outer cover	 A/BS	seal with combined elastomer/ metal outer cover with dust lip
