

DR_x Beasley's™

Your Detailing Prescription

Application Instructions

- 1.** Shake well.
- 2.** Using a microfiber applicator, apply a thin coat to the desired surface.
- 3.** Massage into leather. Allow Leather Cream to sit for 15 minutes to ensure penetration.
- 4.** Remove excess product with a clean microfiber towel.

Additional Tips

If Leather Cream fully absorbs after 10-15 minutes, a second application is recommended.

For maximum results, clean leather with Dr. Beasley's Fine Leather Cleanser followed by pH Neutralizer, before using Leather Cream.

Before applying, test a small amount in an inconspicuous place to check compatibility with surface.
