Your Detailing Prescription

Instructions

1. Shake well.
2. Rinse wheel before spraying directly onto the surface, from the bottom up, to prevent drip marks.
3. Agitate with brush if dealing with tough contaminants. Let sit for a few minutes, then wipe down with a microfiber cloth.
4. Rinse wheels again, then dry with a clean microfiber cloth.
5. Repeat if necessary.

Additional Tips

For maximum results, combine with Intensive Brake Dust Remover for tough buildup. After cleaning, use Exterior pH Neutralizer followed by Wheel Seal for protection.

Before applying, test a small amount in an inconspicuous place to check compatibility with surface.
