

DR_x Beasley's™

Your Detailing Prescription

- 1.** The beginning of a deep wheel and tire clean begins with rinsing, applying Dr. Beasley's Wheel Cleanser, and scrubbing each wheel and tire with the Wheel Brush provided one at a time.
- 2.** For the tires, the Tire Scrub Brush provided is used for getting the tire covered in soap and loosening dirt, rocks, etc with its shorter and stiffer bristles. The Wheel Sponge provided is perfect for lathering the rims of your car to break down large debris such as brake dust and dirt.
- 3.** If you find during this process there are some areas of your wheels that are keeping brake dust even after scrubbing, spray Dr. Beasley's Intensive Brake Dust Remover and scrub with the Dual Purpose Brush for added strength.
- 4.** Once the wheels and tires of your vehicle are rid of scum, rinse and dry the tires with a cotton towel and the wheels with the Microfiber towel provided.
- 5.** Next, apply Dr. Beasley's Wheel Seal by spraying the entire wheel evenly. Using the Microfiber Towel provided spread Wheel Seal to ensure that every area of the wheel is covered.
- 6.** Your wheels now have a nice shine and will be protected from brake dust building up so quickly in the future.
- 7.** Once that step is complete, evenly apply Dr. Beasley's Tire Conditioner to all tires with one of the applicators provided. Wipe off the excess with a clean towel.
