TOUGH, ADAPTABLE, JOB-READY

JUST LIKE YOU

The revolutionary Axios™ modular LED lightbar system takes safety and on-the-job performance to a new level. Choose from seven high-performance LED lighting options with exclusive DropLock™ technology that feature simple twist-lock placement virtually anywhere in the bar.

Backed by a 5-year warranty, it all adds up to a better lightbar without the wait.

NO TOOLS COUNTLESS OPTIONS

Unlimited build options. More operational flexibility. More opportunity. The Axios system enables you to design, build, and deploy the ultimate warning light solution. No-tools convenience makes building, reconfiguring, or upgrading your lightbar fast and easy.

OO-DAY LEAD TIME

Configure Axios on the spot to meet your exact needs and put your vehicle to work the same day. No more waiting on factory schedules and shipping times. Experience on-site, on-demand assembly today at your local ECCO certified Axios Partner.

Mission-specific LED warning and auxiliary lighting modules allow Axios operators to alert the public, direct traffic and illuminate the scene. Choose from three types of warning modules and a variety of options including scene lighting and stop-tail-indicators to suit your specific application. Featuring the most durable materials, advanced optical design, and the latest high-intensity LEDs, each Axios module is engineered to the highest performance standards.

DIRECTIONAL

EZ1401X | 12-24 VDC | 0.9 Amps Amber, Blue, Clear, Green, or Red

Six high-performance 3-watt LEDs and wideangle TIR optics coupled with the ability to adjust the output direction of these lights ensures full 360° SAE Class I, California Title 13, and ECE R65 compliance. Each module provides a uniform 120° horizontal beam and can be positioned anywhere along the power rail, in the front, rear, or corners (at 45°).

BEACON

EZ1402X | 12-24 VDC | 1.0 Amps Amber, Blue, Clear, Green, or Red

14 high-performance 3-watt LEDs combined with a reflective internal housing and lenticular optics deliver full 360° warning in a single unit. The beacon module can be programmed to flash in unison with directional warning modules and also includes a simulated rotating warning signal. SAE Class I, California Title 13, and ECE R65 compliant.

SAFETY DIRECTOR

EZ1414 | 12-24 VDC | 2.5 Amps Amber

The LED Safety Director module is a self-contained warning system designed to direct traffic approaching from the rear of a stationary vehicle. Featuring a total of thirty-six 3-watt LEDs and nine flash patterns, this compact light-stick is mounted outside the lightbar enclosure to maximize options within the bar and is operated via the keypad controller independently from the internal warning modules. SAE Class I.

WORKLAMP EZ1403WL | 12-24 VDC | 0.9 Amps

These flood beam modules feature four 3-watt LEDs that project 900 lumens of bright white light to illuminate your work scene after nightfall. Worklamp modules can be mounted either front or rear facing, anywhere along the length of the lightbar.

ALLEY LIGHT

EZ1403AL | 12-24 VDC | 0.9 Amps

Utilizing the same 900 lumen, flood beam design as the worklamp module, these lights are specifically intended to shine light to the sides of the vehicle, ideal for illuminating alleyways, finding pallet locations, or identifying building numbers in dark conditions.

STOP-TAIL-INDICATOR

EZ1404 | 12-24 VDC | 0.3 Amps

Stop-Tail-Indicator modules operate in conjunction with the vehicles tail, brake, and direction indicator lights to provide supplemental, high level warning of vehicle movements, especially useful for dangerous on-highway applications or where your application may obscure factory installed vehicle lighting. ECE R6 & R7 compliant.

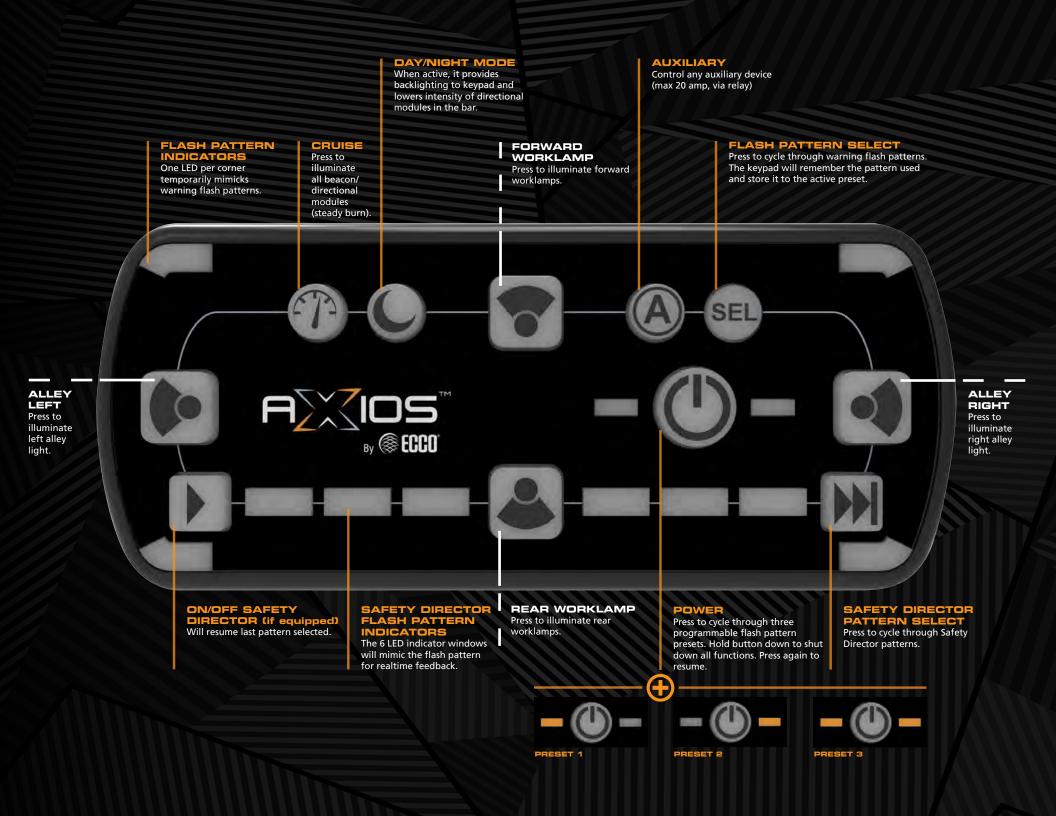

RECOVERY

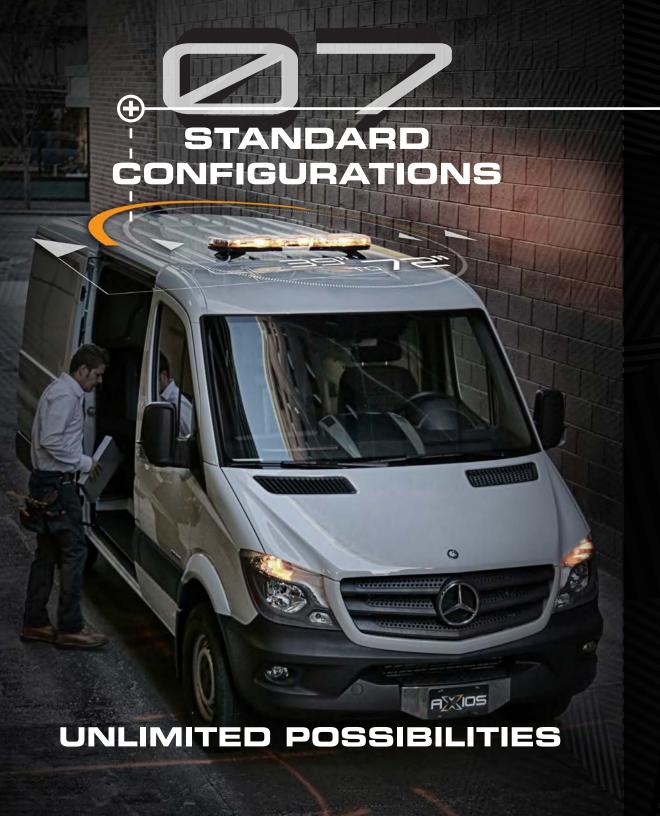

CENTER ILLUMINATION

EZ1411-48, 54, 60, 72 | 12-24 VDC | 0.3-1.4 Amps

Using an opal colored lens and LED strip lighting, the center illumination module provides a soft-glow cruise light option. No other modules are needed in the center section of the lightbar. Vinyl lettering can also be applied to provide backlit signage.

Suitable for any application where width of vehicle warning is desired, Axios is available in five chassis lengths to suit any specific need. Choose from seven standard configurations or design one yourself in no time!

Ideal for use on small vans and other light commercial vehicles. This compact general purpose warning solution is ideal for professionals from plumbers to pilot car operators.

The perfect length for mid-size vans and pick-ups with plenty of space for auxiliary options.

54" The optimum length for full-size vans, pick-ups and smaller tow trucks. This is our most popular bar length.

Ideal for large tow trucks, plows, sweepers, and other heavy road vehicles. The 30" mid-section provides ample room for supplemental warning and auxiliary lighting.

72" Designed for use on the largest commercial vehicles including plows, semi-tractors, and other Class 8 vocational trucks. This bar is so spacious the potential configurations of warning and productivity modules are virtually endless.

Need something a little different? Contact your local Axios dealer or ECCO for details on how to make your custom lightbar design a reality.

CERTIFIED **WORRY-FREE** SERENE ENERGE COMMON COMMON RANGE **CERTIFICATIONS** Beacons & Directionals: SAE J845 Class I, California Title 13, ECE Regulation 65 Safety Directors: SAE J595 Class I **Stop-Tail-Indicators:** ECE Regulation 6 & 7 **Lightbar:** ECE Reg 10 Compliance with SAE Class I, California Title 13 and ECE Regulation 65 is dependent on both the specific configuration of warning modules within the lightbar and the selected flash pattern.

EW0100 Series

Ideal for illuminating toolboxes, racking and small interior compartments, these convenient self-adhesive LED strips are available in various pre-configured lengths as well as 16'/5m rolls. Featuring 1-watt LEDs, each strip can be spliced every 3 LEDs and preconfigured lengths are supplied with wire leads at each end allowing multiple unit to be easily daisy-chained together.

Three 1-watt LEDs per 1.5"/38mm

Self-adhesive utilizing 3M high-bond tape

Wire leads at both ends allow multiple units to be connected (excludes EW0118 / 0128)

Spliceable every 3 LEDs

Available in 16'/5m rolls

CE, RoHS, IP65

ACCESSORIES

EZ0112
Cap & wire for spliced sections

EZO120
PIR Motion Sensor - 110° cone, adjustable sensitivity (automatically activates light when human movement is detected)

At ECCO, we appreciate just how dangerous the utility industry can be. And we're not just talking about installing and maintaining gas pipelines, underground sewer systems and overhead power lines. We are also talking about placing vehicles and technicians in harm's way at the side of busy roads while these tasks are carried out. Most utility vehicles operate at all hours of the day and night, through all kinds of weather. In fact, it is often the weather that necessitates utility crews to be out making repairs. Aside from the threat of inattentive drivers speeding by, the equipment installed on the vehicles including boom lifts, cranes, and cutting equipment also poses a significant risk to the operator. The likelihood of a reversing collision is also increased when large utility bodies limit rear visibility.

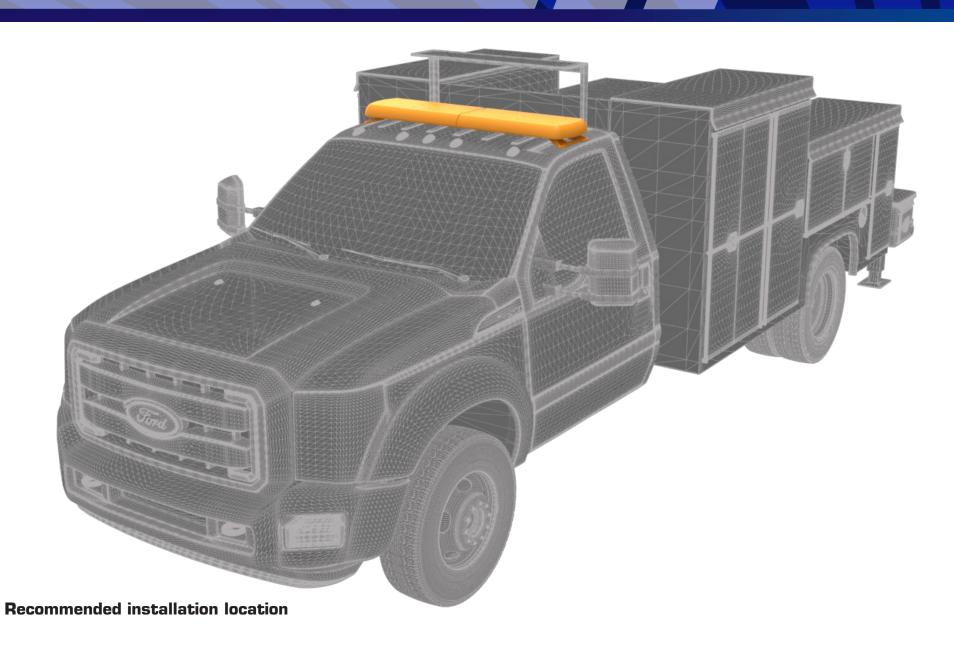

ECCO offers an extensive line of safety solutions that is ideally suited to utility vehicles. High-intensity LED warning lights give approaching drivers advanced notice of a hazard while our range of worklamps ensure that even in the lowest visibility conditions, operators can see clearly what they are doing. Finally ECCO's reversing safety solutions include back-up alarms to warn other road users and pedestrians of a reversing vehicle while our camera systems assist the driver in avoiding obstacles in their blind spots.

Read on to learn about specially selected products for utility trucks, large and small.

At ECCO, we appreciate just how dangerous the towing industry can be. Tow truck operators work all hours of the day and night in all kinds of weather. Your "office" is usually the side of a busy highway—a potentially life threatening place to be. Aside from the threat of inattentive drivers, the task of loading disabled vehicles onto wreckers poses its own risks. And those loaded vehicles limit rear visibility which can increase the likelihood of a collision.

ECCO offers an extensive line of safety solutions that are ideally suited to tow vehicles. Our high-intensity LED warning lights notify approaching drivers of a hazard, while our range of worklamps ensures that you can see clearly, even in the lowest visibility situations. ECCO's reversing safety solutions include back-up alarms to warn other drivers and pedestrians when you're reversing and camera systems to help you avoid obstacles. We make it our job to offer warning equipment to help minimize the risk of personal injury and property damage.

Read on to learn about specially selected products for tow trucks, large and small.

GETTING THE JOB DO

At ECCO, we appreciate just how dangerous the construction industry can be. And we're not just talking about working on high buildings on scaffolding, large amount of exposed electrical wiring, safely handling machinery and tools or hazardous chemicals and minerals like asbestos. We are talking about the inherent danger of operating and working around large construction equipment used to move heavy materials.

Construction sites provide some of the noisiest working conditions in the business. From early in the morning until late in the evening, workers have to be on constant alert for moving objects, working at height, falling or tripping and other potentially deadly hazards. Not only that, but construction sites can usually be found in high-traffic areas that involve speeding cars and inattentive drivers.

ECCO offers an extensive line of safety solutions that are ideally suited for all construction sites and vehicles. Our high-intensity LED warning lights notify vehicles and other site workers of a potential hazard, while our range of worklamps ensures that you can see clearly, even in the lowest visibility situations. ECCO's reversing safety solutions include a variety of back-up alarms including multi-frequency alarms and Smart Alarms suitable for any construction site. To aid with visual impairments caused by large equipment, ECCO offers a fully-integrated line of camera systems that will make operating heavy-duty vehicles safe and stress-free. We make it our job to offer warning equipment to help minimize the risk of personal injury as well as property damage.

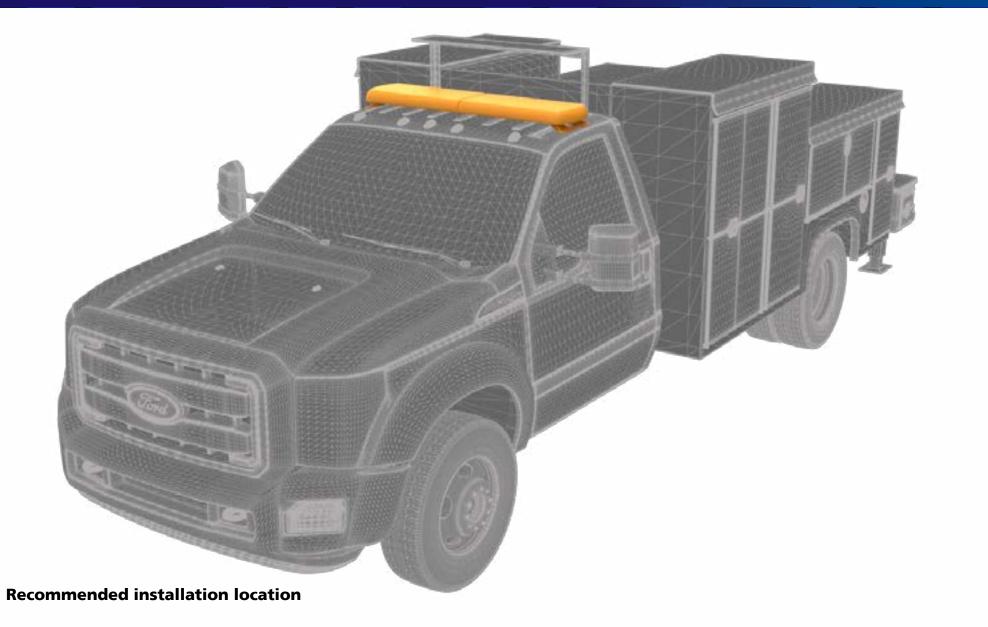

Read on to learn about specially selected products for construction equipment, large and small.

GETTING THE JOB DONE SAFELY

At ECCO we appreciate just how dangerous quarrying and mining is. And we're not talking about working underground, with explosives or using huge drilling, excavating and crushing equipment, we're just talking about the inherent danger of operating and working around the huge mobile equipment that is commonplace on mine sites.

Mining equipment typically operates 24 hours a day, 365 days a year, through all kinds of weather and in some of the most extreme environments on earth. Dark conditions and constant exposure to heat, cold, dust, dirt, moisture and severe vibration requires that only the most durable, high-performance safety and warning equipment will hold up in this application. The sheer size of many types of mining equipment also poses its unique challenges, driver visibility all around the vehicle can be extremely limited with many smaller service vehicles and personnel moving around in close proximity.

ECCO offers an extensive line of safety solutions that are ideally suited to all kinds of mining equipment and vehicles. High intensity LED warning lights signal the hazard of an approaching piece of equipment to ground personnel while our range of heavy-duty worklamps ensure that even in the lowest visibility operators can see clearly what they are doing, minimizing the risk of personal injury. Finally ECCOs reversing safety solutions include back-up alarms to warn of reversing vehicles while our camera systems assist drivers in avoiding blind spot obstacles.

Read on to learn about specially selected, high-output, heavy-duty products that are ideal for use on mining equipment.

⊕ ECCOLIFE™

At ECCO, we appreciate just how dangerous the refuse industry can be. And we're not just talking about the harmful materials being collected on a daily basis or the strain to the body caused by heavy lifting. We are talking about the safety hazards caused by vehicles on the road. One of the most dangerous and potentially life-threatening dangers a refuse collector encounters is the risk of being hit by motorists on the road. The constant need for drivers to swerve around large refuse trucks, sometimes while refuse collectors are hanging from the side, is one reason why waste management is one of the most dangerous jobs around.

As a refuse collector, being mindful of road hazards is only one part of the job — you must also remain cautious of safety hazards caused by your own vehicle while loading and unloading the truck. The heavy equipment used (e.g. front-end loaders and trash compactors) can have severe impacts to the operator's health and safety if not operated correctly. And with the amount of environmental distractions, it's no wonder waste collection was named one of the most unsafe jobs around.

ECCO offers an extensive line of safety solutions that is ideally suited for all types of waste management vehicles. Our high-intensity LED warning lights notify other vehicles that the truck is in operation, even during early mornings during low-visibility situations. ECCO's reversing safety solutions include a variety of back-up alarms including multi-frequency alarms and Smart Alarms suitable for a multitude of different environments from residential to landfills. To aid with visual impairments caused by large equipment, ECCO offers a fully-integrated line of camera systems that will make operating heavy-duty vehicles safe and stress-free. We make it our job to offer warning equipment to help minimize the risk of personal injury as well as property damage.

Read on to learn more about speciallyselected, heavy-duty products that are ideal for the rugged conditions of refuse collection.

At ECCO, we appreciate just how dangerous the highway construction industry can be. And we're not just talking about slips and falls or exposure to harmful substances. We are talking about operating heavy equipment and the dangers associated with worker visibility. Highway workers usually work around-the-clock, in sometimes extreme environmental conditions, to get the job done. From severe weather to operating heavy machinery, there are many factors that can impact safety making the side of a busy highway a potentially life-threatening place to work.

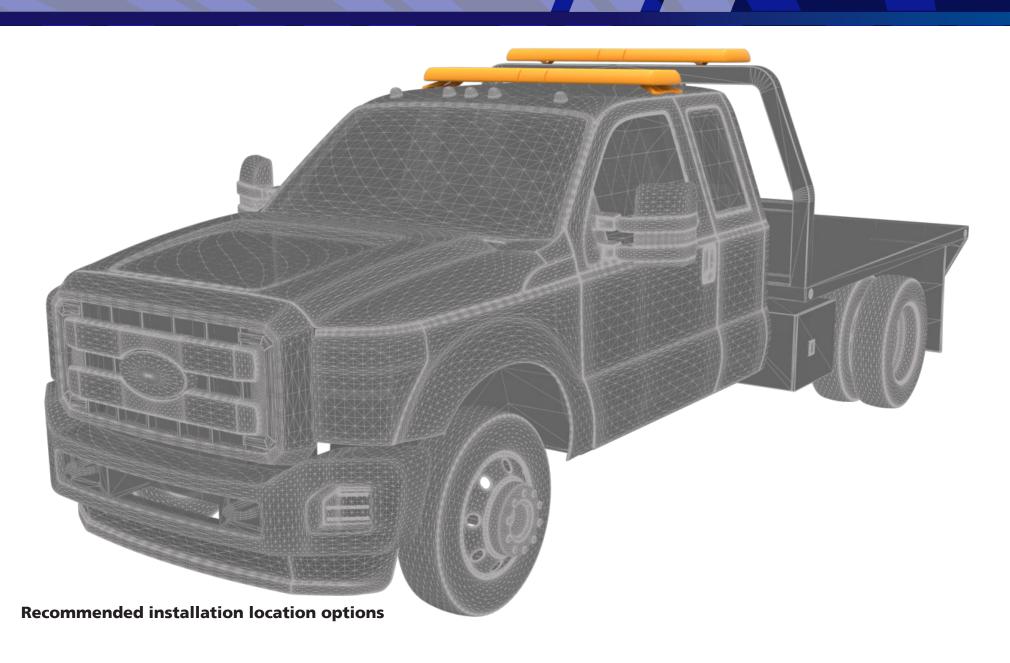

ECCO offers an extensive line of safety solutions that are ideally suited for highway construction workers. The new Safety Director™ provides optimal traffic direction with its SAE Class I certified LEDs. And speaking of LEDs, our high-intensity warning lights notify other vehicles that the road construction is in progress, even during low-visibility situations. ECCO's reversing safety solutions include a variety of back-up alarms including multi-frequency alarms and Smart Alarms to warn other drivers and pedestrians when you're reversing and camera systems to help you avoid obstacles. We make it our job to offer warning equipment to help minimize the risk of personal injury as well as property damage.

Read on to learn more about speciallyselected, heavy-duty products that are ideal for use on the highway - day or night.

In the past few years, the popularity of transit vans has risen tremendously in North America. The versatility of the vehicle has proven to be ideal for everyone from utility fleet owners to construction site workers. And because vans can serve so many different industries, the need for safety and warning equipment is monumental.

There are many benefits to a transit van — one of the most popular being its ability to be customized to the needs of almost any user. Shelving and racks can help tradesmen stay organized, while benches can help move a small construction crew and their materials in one trip.

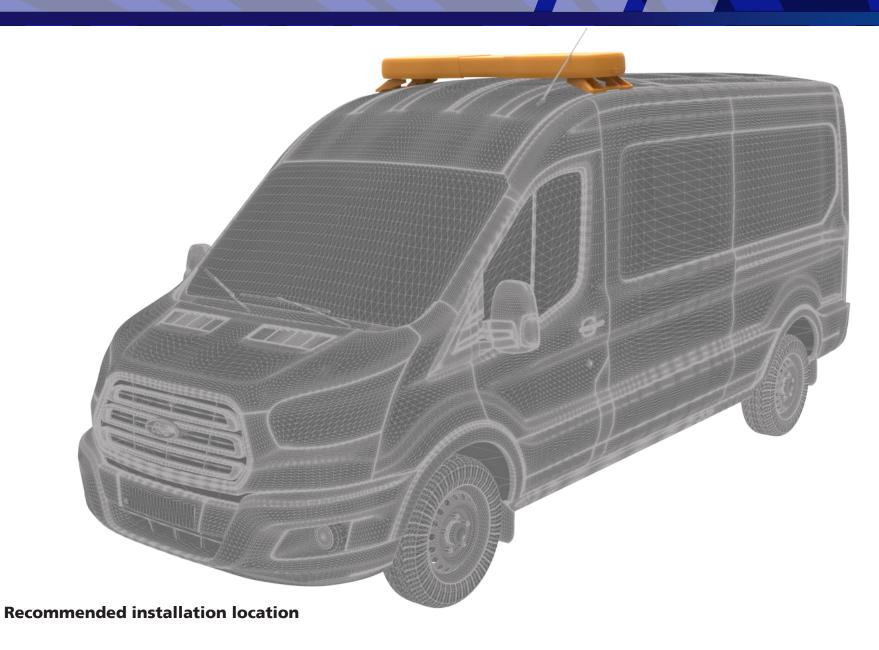

No matter your needs, safety is always a priority. ECCO offers an extensive line of lighting and warning solutions that are ideally suited for all types of transit van applications. High-intensity LED warning light signals provides optimal rear and front visibility. Reversing safety solutions, which include industry-leading back-up alarms and camera systems, assist drivers with blind spots and help alert others of reversing vehicles.

Take a look at our extensive line of products that will help you get your transit van job ready in no time.
