### **TOOL LIST:**

- Floor jack & Jack stands
- Assorted metric & S.A.E. wrenches & sockets
- Air Hammer
- Die Grinder with cutoff wheel
- Drill with 7/16" & 1/2" bit

**CHECK ALL PARTS INCLUDED IN THIS KIT TO THE PARTS LIST ABOVE BEFORE**

**BEGINNING INSTALLATION OF THE KIT. IF ANY PIECES ARE MISSING, CONTACT FABTECH.**

**FABTECH RECOMMENDS FTS92024BK HYDRAULIC BUMP STOP KIT USE ON TRUCKS THAT WILL HAVE HEAVY OFF ROAD USE.**

**THIS KIT MUST BE INSTALLED WITH FABTECH DIRT LOGIC COILOVER SHOCKS NOT INCLUDED IN THIS BOX KIT.**

**THIS KIT IS COMPATIBLE WITH FABTECHS 4/6/8" RADIUS ARM SYSTEM OR 4/6/8" 4 LINK SYSTEM ONLY.**

**NOTE: IF YOU HAVE THE FABTECH DUAL SHOCK KIT FTS52002 ON THE VEHICLE, YOU WILL NEED SEVERAL OF THE PARTS THAT WERE DISCARDED DURING THE INSTALL OF THE DUAL SHOCK KIT. THE FORD PARTS REQUIRED ARE THE FACTORY BRAKE LINE BRACKETS. THE FABTECH PARTS REQUIRED ARE THE SWAY BAR DROP BRACKETS WITH HARDWARE AND SWAY BAR END LINKS WITH THE BUSHINGS AND HARDWARE. CONTACT FABTECH FOR PART NUMBERS IF NESSESARY.**

**Fabtech suspension systems when used on "Gas engine" trucks may require that the front drive shaft be modified. This is done to give adequate clearance between the driveshaft and the factory exhaust. Fabtech does not recommend modifying the exhaust and / or the catalytic converters. Contact Fabtech for additional information.**

**\*\*\* SPANNER WRENCH IS NOT INCLUDED IN THIS KIT. IF NEEDED, ORDER FTS89905.**

## **INSTRUCTIONS:**

1. Disconnect the negative terminal on the battery. Jack up the front end of the truck and support the frame with jack stands. **NEVER WORK UNDER AN UNSUPPORTED VEHICLE.** Remove the front tires.
2. Support the front axle with a floor jack. Raise the floor jack approx. 1". Working on both sides of the truck, remove the front shocks and discard. Save the factory lower shock bolt and nut tab. Disconnect the front sway bar end links from the axle mount and save the hardware.
3. Remove the brake line bracket from the factory coil bucket and discard hardware. If a Fabtech kit has already been installed, remove the brake line drop bracket supplied with that kit and discard. Remove the brake line and ABS line mounts from the lower coil perch and discard the hardware.
4. Remove the trac bar bracket from the driver side of the frame and save the hardware.
5. Lower the floor jack supporting the axle until the coil springs are free of tension. Remove the coil springs and discard.
6. Locate bump stop on the bottom of the frame below the coil bucket and remove. If you have a Fabtech kit that has already been installed on the truck, remove the bump stop along with the drop bracket and discard. Fabtech recommends running the FTS92001 optional Hydraulic Bump Stop Kit. The installation of the coil over kit does not require the installation of a bump stop.
7. Working from the driver's side of the truck, use a die grinder with a cut off wheel to cut a cross pattern in the heads of the rivets that attach the factory coil bucket to the frame. Using an air chisel, remove the heads of the rivets and pry the coil bucket free from the frame. With the bucket removed from the frame use a hammer and center punch and knock the rest of the rivets out of the holes in the frame (unbolt the power steering line bracket from the hoop). SEE PHOTOS BELOW.

Use an air hammer with a chisel bit to remove the head of the rivets

8. Drill all the holes on the outside and bottom of the frame (where the rivets were just removed), to 1/2". SEE PHOTO BELOW.

Drill out the original rivet holes to 1/2"

9. Locate the factory lower coil perch on the axle and remove. Discard the perch and hardware.
10. Using a sharp razor blade cut a 6" wide x 4" high rectangle in the plastic inner fender well as shown below. When cutting the inner fender well do not cut the heat shield felt on the backside of the inner fender well. SEE PHOTOS IN NEXT COLUMN.

Passenger Side Marked and Uncut

Driver Side Marked and Uncut

11. Repeat steps eight through eleven on the passenger side of the truck. Remove the wiring harness from the face of the frame and save the hardware. Carefully bend the A/C lines to make room for the coilover bucket. SEE PHOTO BELOW.

Photo shows bent A/C line

12. Working from the driver side of the truck, locate FT30452 lower coil over axle mount. Place the mount on the axle where the factory coil perch was located, aligning the arm of the new perch into the factory lower shock mount on the axle. Using the supplied 14mm bolt and washer and small amount of the supplied thread locking compound attach it to the axle. Using the original lower shock bolt and nut tab attach the support arm of the mount to the factory shock mount on the axle. Torque the 14mm bolt to 100 ft. lbs. and the support arm bolt to 80 ft. lbs. SEE PHOTO BELOW

Driver side shown

13. Locate FT30513BK (driver side) Coil Over Hoop and align onto the frame where the factory bucket was mounted. Align the holes in the hoop to the holes in the frame. Using the supplied  $\frac{1}{2}$ " x  $1\frac{1}{2}$ " hardware in the holes on the outside of the frame, attach the hoop to the frame, leave loose at this time.

14. Drill the three rear holes to  $\frac{1}{2}$ " through the frame. Locate FT30299 & FT30301 nut tabs and use the supplied  $\frac{1}{2}$ " x  $1\frac{1}{2}$ " hardware attach to the frame. Locate FT161 Sleeve and the supplied  $\frac{5}{16}$ "x2" hardware. Attach the power steering line bracket to the back of the bucket and torque to 15lbs. **NOTE: For 11- up vehicles install FT30514 (ABS Bracket) to the rear of the hoop.** Once tightened, make sure that the lines are NOT making contact with the hoop. Carefully bend them for additional clearance if needed. Repeat steps 14 & 15 on the passenger side of the truck. SEE PHOTOS IN NEXT COLUMN. Torque  $\frac{1}{2}$ " hardware to 127 ft-lbs.

15. Reinstall the trac bar bracket to the frame and torque the frame mount bolts to 80 ft. lbs., motor mount bolt to 55 ft. lbs., & trac bar bolt to 400 ft. lbs.
16. Locate FT30197 upper limit strap bracket. Place the bracket on the inside of the frame to the rear hole on the bottom of the frame (the long side of the bracket mounts to the frame with the short side attaching to the strap). Using the supplied 1/2" x 1 3/4" hardware, attach it to the frame. Attach the forward hole of the hoop to the frame with the supplied 1/2" x 1 1/2" hardware at this time also. Torque to 50 ft. lbs. SEE PHOTO BELOW.

**View of driver's side from looking rear to front**

17. Locate the upper axle pivot on the front axle. Remove the bolt and discard. Locate FT30198 lower limit strap bracket and attach to the inside of the upper pivot using the supplied 18mm x 130mm bolt, nut, and washer. If installing this kit on an 8" kit, the long end of the bracket will be facing upward and on a 4 & 6" kit the short end will be facing up. SEE PHOTOS ON NEXT PAGE.

**Picture Shown With Tab Set Up For 8" Kit**

**Picture Shown With Tab Set Up For 6" Kit**

18. If installing Fabtech's optional Hydraulic front bump stop kit, do so at this time.
19. Locate the supplied two large zip ties. Use the zip ties and attach the wiring harness to the power steering lines inside the driver's side wheel well. SEE PHOTO IN NEXT COLUMN.

20. Locate the two holes on the passenger side coilover hoop. The top hole will need to be drilled out to 17/64". Locate the electrical wiring harness on the passenger side which was removed earlier during install and attach to the coil bucket with the factory hardware. SEE PHOTO IN NEXT COLUMN

21. Locate coilovers and insert one of the supplied FT83034 mis-alignment spacers to each side of the top bearing in the shock. Next locate the supplied FT1040 and FT1041 Delron bushings and place the one with the larger inner ring on the side of the bearing without the snap ring and the one with the smaller inner ring on the side with the snap ring. Insert the top of the coil over into the coil over hoop. Using the supplied 5/8" x 3.5" bolt and washers and FT30183 nut tab connect the coil over to the hoop. SEE DIAGRAM ON LAST PAGE.
22. Locate the last two FT83034 mis-alignment spacers and insert them into the bearing on the bottom of the shock. Using the supplied 5/8" x 3.5" bolt, nut, and washer attach it to the lower mount on the axle. SEE DIAGRAM ON LAST PAGE.
23. Install the supplied limit straps to the upper and lower mounts using the supplied 1/2" x 1 3/4" bolt, nuts, and washers. You will need to stack three 1/2" washers between the limit strap and mounting brackets on both upper and lower mounts. SEE DIAGRAM BELOW.

24. Using the Supplied 1/4" x 1" bolt, nut, and washer attach the ABS line to the new lower coil perch as shown below. The original line clamps will be reused. SEE PHOTO BELOW.

25. Re-attach the upper brake line bracket to the frame just in front of the coil over hoop with the original hardware. Attach the lower brake line bracket to the new lower coil over mount using the supplied 1/4" x 1" bolt, nut, and washer. SEE PHOTO BELOW

26. Make sure the vacuum line from the hub assembly is still routed in the stock position. If the line is tight carefully pull some slack free from the frame mounts.
27. Reconnect the front sway bar back to the axle mount using the original hardware on the 2008 – 2010 models. **2011 models** Locate the FT30456 Lower sway bar extension and attach the extension to the axle using a 1/2x13x1-1/4 bolt, nut and washer as shown in the diagram and pictures below. Torque to 127 ft-lbs.

28. Reinstall the front tires and set the truck back on the ground. Turning the steering wheel fully in each direction, check for contact between the tires and any newly installed components. Drive the truck fifty miles and have a professional front end alignment done. Re-adjust headlights.
