

100% High Tension

The right choice: You have chosen this chain tensioner from the febi engine spare parts range.

Every chain tensioner is checked!

febi has developed a test bench for chain tensioner in a joint venture with one of the biggest German hydraulic machine manufacturers. The febi test bench accurately simulates the stresses and strains to which the tensioner is subjected in actual service in the engine.

All febi hydraulic chain tensioners are 100% inspected using this test bench. Each and every tensioner is individually inspected and tested in all functions, before being passed by the febi quality control department for sale. For you this means even more safety in this very critical area of engine reliability.
