

FAQ

Q Hello sorry to ask a question that may be redundant, but am I correct that this kit contains all the lines for the rear brakes from the ABS control module in the engine compartment to both RH and LH brake cylinders. I only ask because the pictured lines do not match what is currently in the car. Thanks for your help ED.

A This vehicle shouldn't have any rear axle lines; the lines should go straight from the front of the car to the rear wheel braking assembly.

Check out an excellent selection of replacement brake parts we offer on our website.
