

FAQ

Q Does this set contain the passenger side line that goes under the radiator. I cant tell from the picture. By the way, the rear lines you sent me were perfect. Looking forward to doing the fronts. (not)

A This set should have every line that is considered the "front brake system", usually with the Right Front being broken into two sections (with union) for easier installation. However, some vehicles what should be part of the Front Section turns out to be part of what we call the Intermediate line, which connects the front brake system to the rear axle brake system; in this case that would be TIN0016. But its likely not the case for Trucks.
