

RELAIS

FLÖSSER products – Made in Quality

For us these are not just words, but a dedica-tion. Since 60 years and now three generations, we have been supplying automotive lighting related products from our home in Trier/Ger-many throughout the world. What started in the 1950's with incandescent household bulbs, is now automotive light bulbs only. However we've added a few products which also con-cern automotive safety.

Today this is our product range:

- Light bulbs for motorcycles, cars, trucks and buses
- Fuses for low voltage applications, up-to 32 and 58 V, respectively
- Relays & flashers
- Signal horns
- Useful accessories : for example power adapters and bulb holders

Our light bulbs are in accordance with the German norm DIN 72601 or the European norm ECE R37, and, if applicable, the American standard SAE. And our other products as well adhere to their respective norms and are being used in the automotive industry.

Over the years we've established our good name by providing our customers with high quality products and excellent service: personal assistance and short, economical ways of transport. By doubling our warehouse space in 2010 we can offer much shorter shipping and handling times.

Our customers, whether OE or aftermarket, have made us grow into the company we are today: with over 400 customers in over 100 countries across all continents and a distribution center in the USA, we belong to the few worldwide recognized suppliers of this automotive sector.
