

STARTUP SEQUENCE

These tail lights are packed with modern features, including a unique startup animation. Anytime the running light turns on, they will illuminate in a chasing sequence that is sure to turn heads.

MODERN APPEARANCE

Unlike many other aftermarket options on the market, these tail lights were designed with factory-style optics, to diffuse the light in a smooth, even appearance. The outer perimeter of the lamps illuminates in a solid bar for running and brake/turn lights. On the interior of the lamp, you'll find a unique "infinity mirror" design, for a truly distinct and premium look.

SEQUENTIAL TURN SIGNAL

The startup sequence won't be the only thing turning heads. These tail lights also feature a sequential LED turn signal. Every time the turn signal is activated, amber LEDs sequence across the top of the lamp. To enable this feature, a simple wiring harness is included that will be run up to the front turn signals, and connected with a wire tap.

SMOKED, NOT SPRAYED

Nightshade? No thanks. These tail lights are available in two lens colors, red and smoked. The smoked option is designed with tinted optical components, which provides a factory-quality smoked appearance - not a cheap painted look like others on the market.

DUAL REVERSE LIGHTS

The stock tail lights come with a single reverse light in each lamp, and leave a lot to be desired. With dual LED reverse lights, the Form Lighting tails provide much more light when backing up at night.
