FIGURE 1.1

2.1

Place your Front Runner Roof Rack onto your vehicle and find the best position for it.

NOTE: The rack should sit level to the ground, not the vehicle's roof line. Or slanting slightly down toward the front.

With the rack in place, find the best position for the Feet. It is advised to always use the first and last slat to install feet. Should your rack be longer, and kit be supplied with more feet, these feet should be positioned with no more than three open slats between them.

Flip the rack so that the bottom of the rack faces up. Insert two M8 x 20 Hex Bolts (Item 4) into the machined slots on the slats that you have identified.

2.2

Make sure that the wind deflector is installed before you proceed to the next step.

See the Rack Fitment Guide (RRSTUNI) for instructions.

2.3

Before fitting the Feet to the rack, remove the Stud Plates (Item 2). Refer to Figure 1.1.

Loosely fit the Feet to the rack using M8 x 16 x 1.6SS Flat Washers and M8 Nyloc Nuts (Items 4 & 5) as shown.

The fasteners will be fully tightened after the rack has been fitted to the vehicle.

2.4

Before placing the rack onto the vehicle, slide the Stud Plates (Item 2) removed in Step 2.3 into the tracks.

2.5

With the help of a friend, flip the rack right side up.

Lower the rack onto the tracks while aligning the Feet with the Stud Plates in the tracks.

Loosely secure the Feet to the track using M8 x 16 x 1.6SS Flat Washers and M8 Nyloc Nuts (Items 4 & 5).

Before tightening the Feet to the tracks, move the rack so the it sits level to the ground, not the vehicle's roof line, or slanting slightly down toward the front.

After you have tightened the Feet to the tracks, center the rack left to right and fully tighten the fasteners from Step 2.3.

Place M8 Nut Caps on all the Nyloc Nuts.
