

## PRODUCT QUESTIONS

**What is the total height of the rack installed? I see that the tray is 2" (50.8mm), but cannot locate the height of the rails.**

The Foot Rail is approximately 4.2" (107mm) high. The overall height of the rack system is approximately 6.2" (157mm).

**Had a Frontrunner rack on my 4runner and loved it. About to get one for my GX470. I was looking through the install and is it a requirement to use so many spacers? Can you use less of the spacers?**

We recommend using all of the spacers included in the kit.

**I'm ordering a RTT and the clamps can accommodate 3.46" in width for the cross bars. How wide are these?**

The Slats on the Lexus GX470 Slimline II Roof Rack Kit (KRLE004T) (and all our racks!) are 3 1/2 inches wide.

**What are the static and dynamic load ratings for the rack? Looking to install on a 2006 GX 470**

All Front Runner Rack Trays have a max load rating of 660lbs (300kg). We don't promote a dynamic load weight as there are too many variables, such as load placement and road conditions.

**Will I be able to open my sunroof completely with the rack installed?**

Yes. You will have the ability to open your sunroof completely with the Roof Rack (KRLE004T) installed. You may even be able to remove the slats directly above for clear access. Call us for more info!

**I watched the rack video and it made me wonder if I can omit 2 or 3 of the flat, grooved crossmembers upon assembly/installation of the full cargo rack (KRLE004T) so I can stand up through my GX470's sunroof?**

You can remove and/or relocate the 2nd and 3rd crossmember from the front. You cannot move the very front crossmember due to it being part of the frame of the rack as well.
