

PRODUCT QUESTIONS

What is the largest size bolt that the slots will accommodate?

The t-slots will accommodate M8 size hardware.

What is the height of this rack when installed on the 4runners?

Height from the roof to the top of the rack is approximately 5 inches / 127 mm. That leaves the perfect amount of space for the wind deflector to make sure your rack stays quiet at all speeds.

How is the wind noise with the full length rack?

We incorporate a well designed and functional wind deflector with each rack making the wind noise extremely minimal. This is one of our best selling racks and we know you'll be thrilled.

Can you install a roof top tent on this rack ?

Yes! You will absolutely have the ability to install a Roof Top Tent on the Full Length 4Runner Rack (KRTF054T).

What's is the load capacity of the roof rack? Dynamic and static?

The Static Load rate for the Slimline II Rack Tray is 660lbs (300kg) (evenly spaced across the Tray) . As for the Dynamic load there is not a exact load rate as there are many variables to take in like load placement, road conditions, etc.

Given that there are no factory mounting points for the front of the rack, is there reason to be concerned that the front of the roof isn't designed to support the loads this rack will place on it?

There is no need for concern. The Foot Rails bolt in the same channel and same way the factory would of if they offered a full length roof rack.

Is there an led light bar mount for this specific rack for the front of the rack?

There is not a vehicle specific LED light bar mount. Give us a call so we can find a suitable solution for you.

Is there a rivnut setter that you recommend for installing this rack?

Any reasonably priced Rivnut Tool will work. Amazon and most hardware stores will carry one. For more information please feel free to give us a call.

Can the Slimline II be mounted in standard universal track rather than with the included foot rails? I'd like to remove the rack when not in use and not leave large foot rails attached to the roof.

Yes- you can do a Track and Feet set up on your 4runner. But we strongly recommend using the (KRTF054T) kit as it is designed just for the 4runner and is a much stronger system for that application. Call us when you're ready and we can help you put together your kit w/ Universal tracks.

I have a 2016 Toyota 4Runner SR5 premium with a sunroof, my question is will this rack work and does it have enough room to clear when the sunroof is opened?

Yes. The Rack was designed to have enough clearance for the sunroof models.

Can I remove the front crossbars for access of the sunroof? As well what epoxy do you recommended for securing the front struts that must be drilled?

You cannot remove the front Combined Slats as they are what the Foot Rails tie into and are the main support of the front of the Rack. As for sealing the area where you have to drill, any clear silicon from your local hardware or auto parts store will work.
